Editor's Letter

The total crypto market capitalisation topped \$2 trillion on August 14, the first time since mid-May, according to data from coinmarketcap. That was followed by Bitcoin rising above the psychological barrier at \$50,000 on August 23. Both these events have improved sentiment and analysts are predicting a Bitcoin rally above \$100,000.

PayPal announced on Monday that it will offer crypto services to residents in the UK starting this week. Users will be able to buy, sell, and hold Bitcoin, Ethereum, Litecoin, and Bitcoin Cash through a new crypto tab on their PayPal account, both via the app and the website. This move by PayPal will further improve the penetration of cryptocurrencies.

We had mentioned in our earlier analysis that Bitcoin may rise to £36,000 and then to £38,000 if it sustains above £31,005 and that is what happened. The BTC/GBP pair rallied to £36,999 on August 23. Traders who had purchased on our earlier recommendation may book profits on 75% of the open positions and trail the rest with a stop-loss below the 20-day exponential moving average (EMA).

The pair is likely to face stiff resistance at the 61.8% Fibonacci retracement level at £36,834.35 and then again at £38,000. If the price turns down and breaks below £35,280, the pair could decline to the 20-day EMA.

A strong rebound off this support will suggest that the trend remains positive and the bulls will then again try to resume the uptrend. A breakout of £38,000 could open the doors for a rally to £42,500. The first sign of weakness will be a break and close below the 20-day EMA. Such a move will suggest that traders are closing their positions and supply exceeds demand. The pair may then decline to the 50-day simple moving average (SMA).

Lastly please check out the advancement's happening in the cryptocurrency world.

Enjoy the issue!

WEEKLY CRYPTOCURRENCY MARKET ANALYSIS

Hello, welcome to this week's 196th edition of Cryptonaire Weekly Magazine. The global crypto market cap is \$2.14 Trillion, up \$164 billion since the last week. The total crypto market trading volume over the last 24 hours has increased by 13.09% to \$114.26 Billion.

The DeFi volume is \$14.97 Billion, 13.10% of the entire crypto market's 24-hour trading volume. The volume of all stable coins is \$86.97 Billion, 76.11% of the total crypto market's 24-hour trading volume.

Bitcoin's price has increased 6.84% from \$46,330 last week to around \$49,500 and Ether's price has increased 3.91% from \$3,200 last week to \$3,325.

Bitcoin's market cap is \$930 Billion and the altcoin market cap is \$1.21 Trillion.

The total crypto market capitalisation topped \$2 trillion on August 14, the first time since mid-May, according to data from coinmarketcap. That was followed by Bitcoin rising above the psychological barrier at \$50,000 on August 23. Both these events have improved sentiment and analysts are predicting a Bitcoin rally above \$100,000.

PayPal announced on Monday that it will offer crypto services to residents in the UK starting this week. Users will be able to buy, sell, and hold Bitcoin, Ethereum, Litecoin, and Bitcoin Cash through a new crypto tab on their PayPal account, both via the app and the website. This move by PayPal will further improve the penetration of cryptocurrencies.

Even legacy finance companies have been facilitating crypto trading for their clients. Wells Fargo and JPMorgan have partnered with technology and financial services firm New York Digital Investment Group to launch Bitcoin funds for their clients. Both the companies will receive servicing and placement fees for referring clients to NYDIG.

Coinbase CEO Brian Armstrong tweeted on August 20 that the company's board had approved the purchase of over \$500 million of crypto to add to the existing crypto holding. With this, the exchange becomes the "first publicly traded company to hold Ethereum, Proof of Stake assets, DeFi tokens, and many other crypto assets," Coinbase said in a blog post.

Percentage of Total Market Capitalization (Dominance)

Bitcoin	43.34%
Ethereum	18.21%
Cardano	4.28%
Binance Coin	3.87%
Tether	3.04%
XRP	2.67%
Dogecoin	1.91%
Polkadot	1.27%
USD Coin	1.26%
Solana	1.08%
Others	19.06%

TOKEN

PYLON ECO TOKEN (PETN)

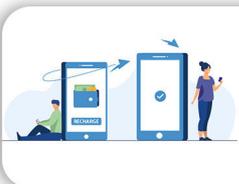

A DeFi Governance Token, with the benefit of Utility Token, Security Token and CryptoCurrency.

It is Deflationary, also provides Staking Reward and is Backed by Guarantee Portfolio.

Daily used in plenty of our Open source projects to bring mass crypto adoption.

Get your Token to decide the future of the project !!!

Ecosystem

Mobile Topup & Gift Cards

Provides a wide range of payments in Finance, Gift Cards, Government, Insurance, Internet, Landline, Mobile, Television, Transportation, Utilities and VOIP services across Africa, Americas, Antarctic, Asia, Europe and Oceania.

Travel (Hotels/Flights)

Provides a wide range of payments required for your travel needs national and international Hotel Reservations, Flight Tickets, Car Rentals, Cruises, Trains Tickets and Insurances around the globe.

E-commerce

Offers millions of products with the best price guarantee. Starting from the USA, we are opening new countries for local delivery of all our products, upcoming countries are India, Australia, China and Russia.

Auction

Provides a wide range of products in auction where you can participate and place your bids on your desired price. We have products available for hourly, daily, weekly, monthly and yearly deadlines for it.

Exchange Listing

We have already announced our listing to the first exchange . The exchange has already confirmed the listing to their exchange via their announcements. XT is the World's First Social Infused Exchange.

[More Details](#)

Play

Offers wide collections of games for adults and non adults in free or paid for real time earnings. You can play as a challenge with your friends. Games are across racing, shooting, adventures, puzzles, cards, toss, rullets, slots, arcades e.t.c.

Wallet

Buy, store, exchange and earn crypto using our trusted and secure crypto wallet. We offer internal wallets along with external wallets. Using internal wallets to transfer across ecosystem sites in your account are fast, secure and free of cost.

Exchange

As a growing demand of crypto across the globe, we offer the widely used top crypto to buy, sell or trade. Some of the cryptos are BTC, BCH, ETH, ETC, LTC, USDT, TRX, XRP e.t.c.

Payments & Cards

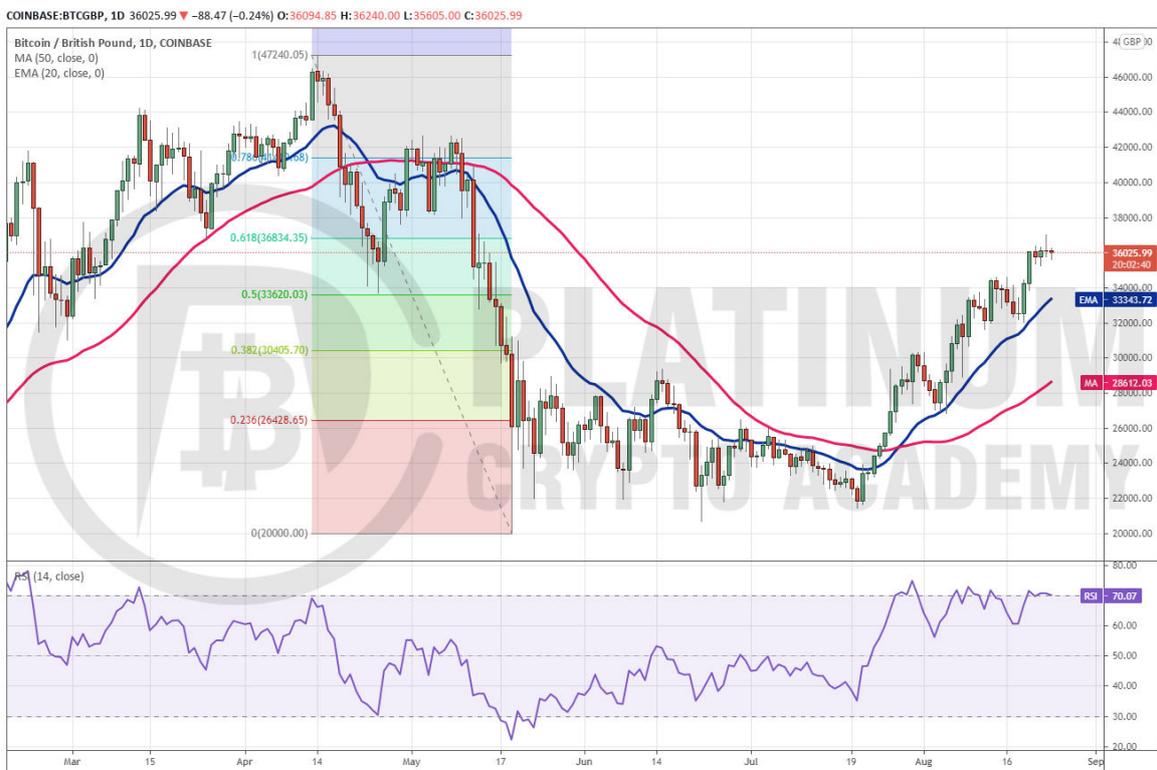

It offers the payments and remittance service, through which you can cash out your token values in fiat currencies through its channel partners. It will also offer pre-paid debit cards to use worldwide through exchange of your tokens.

CRYPTO TRADE OPPORTUNITIES

BITCOIN - BTC/USDT

We had mentioned in our earlier analysis that Bitcoin may rise to £36,000 and then to £38,000 if it sustains above £31,005 and that is what happened. The BTC/GBP pair rallied to £36,999 on August 23. Traders who had purchased on our earlier recommendation may book profits on 75% of the open positions and trail the rest with a stop-loss below the 20-day exponential moving average (EMA).

The pair is likely to face stiff resistance at the 61.8% Fibonacci retracement level at £36,834.35 and then again at £38,000. If the price turns down and breaks below £35,280, the pair could decline to the 20-day EMA.

A strong rebound off this support will suggest that the trend remains positive and the bulls will then again try to resume the uptrend. A breakout of £38,000 could open the doors for a rally to £42,500. The first sign of weakness will be a break and close below the 20-day EMA. Such a move will suggest that traders are closing their positions and supply exceeds demand. The pair may then decline to the 50-day simple moving average (SMA).

[Previous Analysis...](#)

ETHEREUM - ETH/USDT

COINBASE:ETHGBP, 1D 2428.62 ▲ +8.47 (+0.35%) O:2423.53 H:2444.00 L:2396.54 C:2428.62

We had mentioned in our earlier analysis that £2,400 may act as a resistance and that is what happened. Ether has been struggling to break out and sustain above this resistance for the past few days.

But a positive sign is that the bulls have not allowed the price to break below the breakout level at £2,160. With both moving averages sloping up and the relative strength index (RSI) in the positive territory, the advantage is with the buyers.

If bulls push the price above £2,500, the ETH/GBP pair could start its journey toward the next target objective of \$3,000.

If the price turns down from the current level, the pair could drop to the 20-day EMA. A strong bounce off this support will suggest that bulls are buying the dips aggressively. That will enhance the prospects of the resumption of the uptrend.

A break and close below the 20-day EMA will be the first sign that the bullish momentum could be weakening. Traders who bought on our earlier recommendation may trail their stops just below the 20-day EMA.

[Previous Analysis...](#)

RIPPLE - XRP/USDT

BINANCE:XRPGBP, 1D 0.89607 ▼ -0.00638 (-0.71%) O:0.90179 H:0.90611 L:0.88331 C:0.89607

XRP broke above the downtrend line of the descending channel and surged to the overhead resistance at \$1.07 on Aug. 11 but the bulls could not sustain the higher levels. The bears pulled the price back inside the channel on Aug. 12 but the correction was short lived.

The bulls have again pushed the price above the channel today and are attempting to clear the stiff hurdle at \$1.07. If the price breaks and closes above \$1.07, the XRP/USDT pair could start its journey to \$1.26 and then to \$1.70.

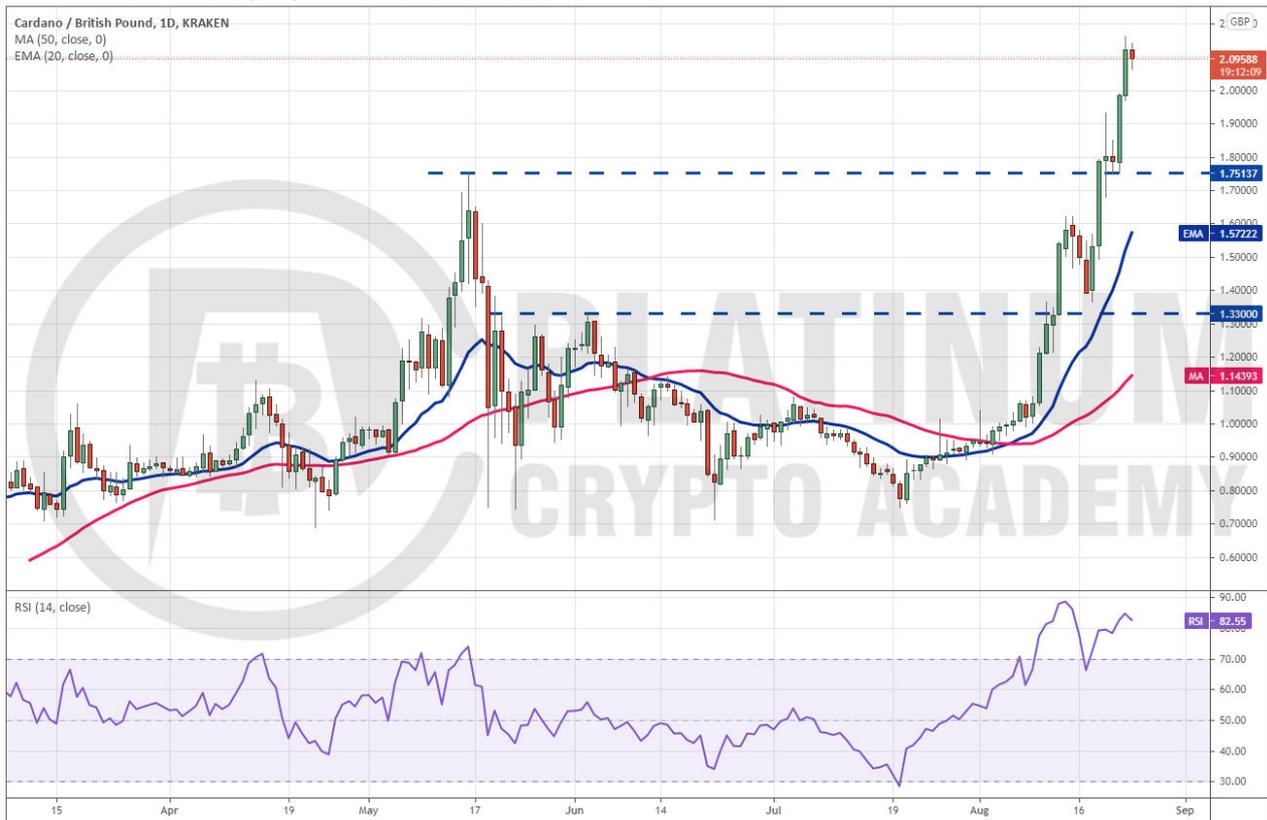

Contrary to this assumption, if the price turns down from \$1.07, the bears will again try to pull the pair back into the channel. If they manage to do that, the next stop could be the 20-day EMA (\$0.80).

If the price rebounds off the 20-day EMA, the bulls will make one more attempt to drive the pair above \$1.07. Alternatively, a break and close below \$0.75 will signal advantage to the bears.

[Previous Analysis...](#)

CARDANO - ADA/USDT

KRAKEN:ADAGBP, 1D 2.09578 ▼ -0.02642 (-1.24%) O:2.12120 H:2.14280 L:2.06380 C:2.09588

The long wick on Cardano's (ADA) candlestick on Aug. 11 shows that bears tried to stall the rally near the overhead resistance at \$1.94. That was followed by an inside-day candlestick pattern on Aug. 12 but the long tail on the day's candlestick showed strong buying at lower levels.

The bulls have thrust the price above the overhead resistance today, which opens the gates for a rally to the all-time high at \$2.47. However, the RSI has risen above 86, indicating that the rally is overextended in the short term.

Therefore, the ADA/USDT pair could witness selling at higher levels and may enter a minor correction or consolidation in the next few days. A break and close below \$1.94 could result in a pullback to the 20-day EMA (\$1.51).

Alternatively, if bulls defend the breakout level at \$1.94, it will suggest that traders are not booking profits. That will enhance the prospects of a retest of the all-time high.

[Previous Analysis...](#)

BINANCE - BNB/USDT

BINANCE:BNBGBP, 1D 358.84 ▼ -2.97 (-0.82%) O:361.12 H:364.99 L:356.39 C:358.84

Binance Coin (BNB) formed an inside-day candlestick pattern on Aug. 12, indicating indecision among the bulls and the bears. The buyers purchased at lower levels and are currently attempting to resolve the uncertainty in their favor.

If bulls propel the price above \$408.72, the up-move could reach the overhead resistance at \$433. The bears may again pose a stiff challenge at this level and if the price turns down from this resistance, the pair could drop to the 20-day EMA (\$347).

A strong bounce off this support will suggest that sentiment remains positive and traders are buying on dips. That will increase the possibility of a break above \$433. If that happens, the BNB/USDT pair could start its journey to \$520 and later to \$600. The bears will have to pull the price back below \$340 to gain the upper hand.

PRESS RELEASE

REAL ESTATE IS BEING DEMOCRATIZED AND GENIUX IS LEADING THE WAY

What often springs to mind when we think of investing in real estate? Oftentimes, we think of it as large development firms buying up acres of properties and several high-rises or we think of people owning multiple investment properties and condos. Simply put, we often envision a large capital-intensive affair that is not accessible to the everyday person.

To a great extent, this is true as most people are told to budget a significant amount of money if they want to invest in real estate. The issue with this is that it creates a high barrier to entry that keeps out many everyday people.

As such, it is no surprise that in the last few years, blockchain has been used to democratize the real estate industry and make it more accessible. This has happened through the tokenization of real estate projects as well as other forms of investments and as these continue to grow and expand, more people will be able to enter different investment vehicles and make a profit. One company that is leading the way in terms of the democratization of real estate is a firm called **GENIUX ESTATES**.

HOW REAL ESTATE IS TOKENIZED

Typically, when a piece of real estate is sold to an investor, they buy an entire apartment, building, house or so on outright or mortgage it, and usually, this investment is limited to one or just a few people who have to bring a large sum of money.

In the last few years, however, real estate is becoming more tokenized. When a piece of real estate is tokenized, small fragments or shares in it are sold as digital assets and many people can buy part ownership of the property. For example, if a piece of real estate is worth \$1 million, 100 tokenized pieces of ownership worth \$10,000 each can be sold.

This means that rather than having to come up with the entire \$1 million or several hundreds of thousands of dollars to invest in a property, an investor can invest only \$10,000 or, in some cases, even less money. As profits are generated from the real estate investment, investors receive portions of the revenue depending on how many tokens were bought into the property. The benefit of this is that people with fewer funds to invest can still benefit from the real estate market and this is what GENIUS ESTATES is working to improve upon.

HOW GENIUS ESTATES COMES IN

A lot of the time, when a piece of real estate is tokenized, it is sold in what is called a Security Token Offering or an STO. If a person wants to participate in an STO, they usually have to create an account with a specific platform and buy into the native token of the STO.

The problem is that oftentimes, consumers have to seek out these platforms in different ways and have to follow different rules for each platform. GENIUS ESTATES addresses this issue where consumers can buy into multiple STOs using its native token.

This means that rather than go to different platforms, consumers can buy into different investment vehicles from a single platform the same way you can buy from multiple vendors on a singular e-commerce site. Income from these different projects is paid out in the native token, GENiUX, which is an ERC-20 standard token.

Users will also receive rewards for recommending the site to other people and investments on GENIUS ESTATES are not limited to just real estate. There will be an option to invest in Genius Air that offers co-ownership of private jets, Genius Art that allows for the buying of NFTs, and even Genius Sports. Overall, the message is clear that tokenization of different investment vehicles and democratization is key to the new world of investing.

GENIUS ESTATES is currently conducting the pre-sale phase of its own ICO and its first property in Ireland launched earlier this year in May. Moving forward, we can expect to see even more of these types of projects pop up that will go a long way to not only make investors more money but make the industry more equitable and accessible as a whole.

MININGWATCHDOG SMARTCHAIN MSC ERC20 TOKEN ANNOUNCES IMPENDING PRE-SALE LAUNCH

The Primary Currency for Buying All-Crypto Related Products and Services under one Roof!

Miningwatchdog Smartchain MSC ERC20 Token is the first of its kind Smart Token in the Ethereum Blockchain used as the primary currency on the Miningwatchdog marketplace. A Marketplace that Crypto enthusiasts can buy and sell new and fairly used miners 24/7. Other Crypto services you can engage in include Exchanging Altcoins for major Cryptos!

August 30, 2021, Get this: Tens of millions of people worldwide want to get their hands on Crypto Miners. Unfortunately, not all of them get to buy new ones due to the competition that sees most miners sold out within days of release. Imagine if there's a place where you can buy used and new miners. Then, anyone could get fairly used miners at an affordable rate.

What we are describing is the concept advanced by the Miningwatchdog team in the soon-to-launch Pre-Sales Event. Most of the ICO's appearing on the scene are merely startups with hope and a dream. Not so with Miningwatchdog, which is already up and running. A classic Crypto product and service provider with hundreds of users.

Miningwatchdog's ICO has been receiving massive attention across all forms of media. Private investment groups are also broadly interested in the marketplace. A fully decentralized P2P network on the Ethereum Blockchain, Miningwatchdog Marketplace allows for transparency. You will get to save hundreds of dollars with the new decentralized Crypto marketplace.

All mutual agreements are allowed within the Miningwatchdog Smartchain MSC ERC20 Token. The demand for the token is fueled by the need to buy Crypto mining hardware and services. You can also sell your tokens for other desired cryptocurrencies on leading exchanges. One of the problems MSC Token solves is solving Crypto mining issues.

You can get new and fairly used ASIC and GPU miners at an affordable price. The platform also offers a P2P marketplace for hashrate sales. Those who can't buy mining equipment stand a better chance with suitable mining contracts. To guarantee transparency, all activities and transactions are recorded on the ever-improving Ethereum Blockchain.

Miningwatchdog is announcing their Pre-sale of Token MSC. During the Pre-sale, there are 40,000,000 on offer. 1MSC=\$0.5 during the pre-sale event with a vesting period of 6 – 18 months after the ICO/IDO event. The Pre-sale starts on 30 August 2021 at 00:00 UTC and ends on 31 August 2021 at 23:59 UTC.

Discussing the Miningwatchdog Project, CEO Platinum Crypto Academy and Editor in Chief at Cryptonaire Weekly Mr Karnav Shah noted: "It's rare you come across a project that explores wider utilities of the blockchain technology and expands the horizons. It is a Decentralized Peer to Peer Multi Utility Token which is a beacon of decentralization and helps investors keep track of their tokens. We are truly excited to share the Miningwatchdog project and explain its fundamentals to our readers. We are certain that we will have more about this promising venture in our subsequent publications."

ADVANCEMENTS IN THE CRYPTOCURRENCY WORLD

PayPal Rolling Out Crypto Trading in the UK This Week for BTC, ETH, LTC, and BCH

PayPal “definitely” has “ambitions to continue to expand” its crypto services range in the other markets and beyond the US and the UK, where it expects the new rollout to do well.

After the US, PayPal is now allowing its users in the UK to buy, hold, and sell cryptocurrency through its platform for as little as £1.

To begin with, only four cryptocurrencies will be offered viz. Bitcoin (BTC), Ethereum (ETH), Litecoin (LTC), and Bitcoin Cash (BCH).

The new service will begin rolling out this week, the first international expansion of PayPal’s crypto services outside the US, and would be available to all eligible customers within the next few weeks.

In the US, users can also pay the merchants on the network through crypto, a feature not yet confirmed for release in the UK.

Welcome to the world of **GENIUS ESTATES**

Now, Everyone Can Gain Access to Real Estate Investments
Leverage the latest in blockchain technology to
buy fractional property in real estate!

THE AGE OF GENIUX **ENTER THE NEXT GENERATION OF ICO, STO, AND NFT**

[WHITEPAPER](#)

[GET TOKENS](#)

WHAT IS **GENIUS ESTATES**

platform enables ordinary investors to tap into the immense wealth from owning real estate, because the latest mechanism in real estate – called real estate tokens – enables you to own fractional property. This means you can become a shareholder of a property in virtue of buying tokens that represent a portion of the value of your investment.

[WHITEPAPER](#)

[GET IN TOUCH](#)

Our forthcoming marketplace will empower you to invest in – and earn dividends on – a wide range of exciting assets spanning various industries. Leverage your GENIUX tokens as payment and maximize your earning potential.

Genius Estates

Get your real estate tokens to invest in your share of a multitude of exciting projects in the future.

Genius Air

Co-own private rental jets and earn dividends every time a rental occurs.

Genius Highway

Contribute to the construction of highways all across Europe, with all tax earned distributed as dividends to investors.

Genius Art

Invest in NFT (Non-Fungible) tokens whereby data is stored in a digital ledger and represents a specific piece of art. This could be in the form of a digital file, music album, or something else.

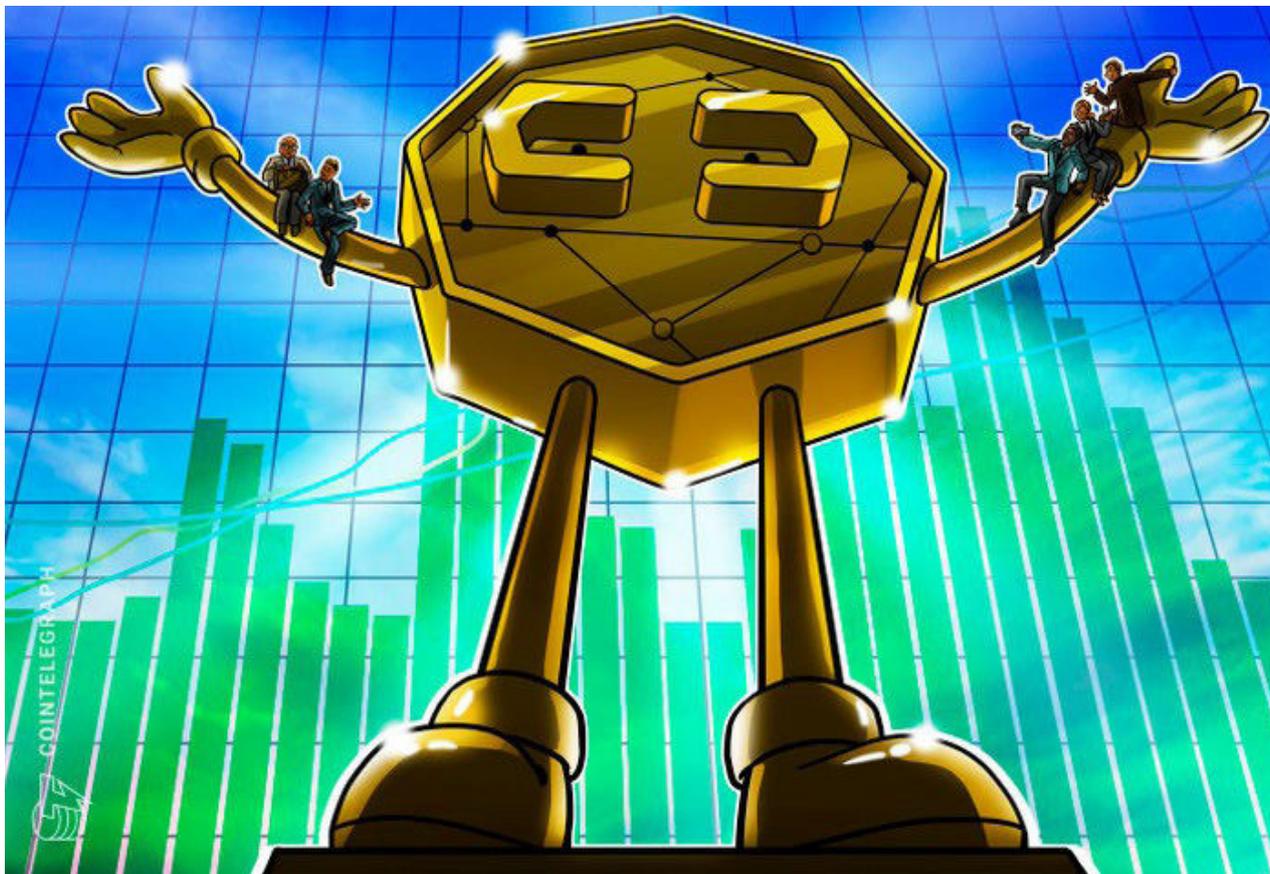

Genius Sports

We envision a future where the value of sports teams is digitized, empowering investors to earn dividends every time a player is transferred or monetized activity occurs.

[GET TOKENS](#)

Institutional investors bet big on Solana while BTC outflows persist

Solana represented one-third of total inflows to institutional crypto investment products this past week.

Institutional investors are loading up on Solana (SOL), with one-third of inflows to crypto investment products being invested in instruments tracking Solana this past week.

According to CoinShares' Aug. 23 Digital Asset Fund Flows Weekly report, \$7.1 million flowed into Solana investment products between Aug. 15 and Aug. 20.

While the price of SOL gained a meagre 1.4% on the spot markets over the same period, SOL has gained 110% from \$35.58 since the start of August to trade for \$75 as of this writing.

CoinShares' report notes that institutional crypto investment products bucked a six-week trend of outflows, with roughly \$21 million flowing into the sector this past week.

Products tracking Cardano (ADA) were the second-most popular for the week with inflows totaling \$6.4 million. Institutions also poured \$3.2 million into products tracking Ethereum (ETH), \$1.8 million into Litecoin (LTC), and \$1.1 million into Polkadot (DOT).

GSX-GOLD-BACKED TOKENS FOR SECURITY AND PROFITS

In recent times, there are numerous cryptocurrencies that are present in the global cryptocurrency market. Cryptocurrencies today are incredibly volatile, and their value may rise or fall depending on various factors. The feature of cryptocurrencies that has to be highly volatile is one of the reasons why a huge population does not want to deal with them.

Cryptocurrencies come with a sense of uncertainty since they can see an appreciation in value at a very fast rate earning the investors profit; simultaneously, the reduction in its value also happens at a similarly fast rate. Cryptocurrencies are highly responsive to market trends and global updates. This characteristic of a cryptocurrency raises hesitancy in the minds of those investing in crypto.

THE SOLUTION TO VOLATILE CRYPTOCURRENCIES – STABLE COINS

One of the innovations that have emerged as a solution to counter this uncertainty is stable coins. Recently, the market has seen a proliferation in stable coins. The question that arises is, what exactly is a stable coin? Stable coins are essentially a form of cryptocurrency linked to an asset that guarantees that the value does not change drastically. For instance, if one were to see the introduction of Tether, a stable coin, it is backed by the US dollar. As a result, the value of the stable coin, as the name suggests, remains stable, i.e. fluctuates very little. Unlike cryptocurrencies such as Ethereum and Bitcoin, it is not as volatile. Furthermore, it is also not subject to immediate rise and fall in value. A stable coin effectively counters the fallacies of a volatile cryptocurrency.

As a result, the cryptocurrency market has witnessed the emergence of GSX-Gold Secured Currency, a new take on a stable token. This growth token, much like all other stable tokens, is also backed by an asset, in this case, gold. The precious metal gold provides the stability of this cryptocurrency. The stability comes from the fact that gold, a precious metal, will always have a consistent value, which can only increase. This consistency in gold's price brings stability to the value of Gold Secured Currency and ensures investors of a minimal value of the asset, and guarantees profits. GSX is backed in a unique manner that utilizes a trust for added investment security.

WHAT IS “GSX-GOLD SECURED CURRENCY”?

Utilizing the Apollo Blockchain, GSX is an innovative, growth token. GSX, a gold-backed token, is a result of the endeavour to find a solution to the volatile nature of cryptocurrencies. The growth token is backed by a trust comprising gold and land rich in gold. It is essentially a gold-backed token that ensures investors' long-term profits by making a low-risk crypto investment.

The land owned by GSX in Zimbabwe, which is rich in gold, is one of the assets behind GSX. This gold-backed token combines the best of every world to create one of the strongest and most stable cryptocurrencies. The name itself suggests that this token is one of the stable cryptocurrencies that derives its security from gold.

STABILITY WITH PROFITS

Essentially, GSX is a gold-backed token that offers a minimum value to its investors, and they are assured of a certain value from this growth token. The value of these gold-backed tokens is secure with assured growth. Its value cannot depreciate based on any circumstances that may arise in the future, thus making it a very low-risk crypto investment.

GSX is secured by stable assets that can only grow in value. The company owns several acres of gold-rich land in Zimbabwe. The value of the land and gold will remain constant with minor fluctuations, but the trend in their prices will only be upwards. This guarantees definite security behind GSX, and the investor is ensured with minimal losses. The company has already revealed their plans of initiating a gold mining project in the said land; with infrastructural developments, the price of the land will only grow. Simultaneously, projections show a rise in the prices of gold for the indeterminate future. Since the price of the land and the gold will appreciate, it is guaranteed that the value of GSX will only increase shortly. This provides enough security and surety for any investor to invest in GSX, the best among stable cryptocurrencies.

HOW THE GSX-GOLD-BACKED CRYPTO WORKS

The working of this low-risk crypto investment is not hard to discern. This stable cryptocurrency works on a mechanism that is quite similar to any other investment in crypto. The GSX mechanism is based upon the company's investments, the gold-rich land and the subsequently mined metals by the company. Investing in GSX gold crypto tokens means that the investor has the rights to the mine, the infrastructure, all equipment related to it, the metal-rich land, and the mining company itself. Additionally, 50% of the gold produced by the company would be invested in the gold-backed token itself to increase its value.

COIN BURNING

The initial value of the gold-backed tokens are based upon the value of gold, and the gold-rich land, as mentioned above. The parent company also uses a technique termed "coin burn" to ensure that the stable cryptocurrency retains its value. In this technique, the parent company "burns" an equivalent of 50% of the available tokens and can shift their value onto the remaining tokens to increase the value of the remainder. This technique shows that the stable cryptocurrency's value is sustained and deflationary.

INVESTMENT IN THE TOKENS

The parent company guarantees that 25% of transaction fees associated with the products of the company will be directed towards mining more gold and mining land to maintain a constant supply to back the stable cryptocurrency. 50% of the gold mined would be furthered to back the GSX gold crypto token, which would result in an increase in its value.

The GSX gold crypto token operates on the Apollo Blockchain, which supports rapid transactions and other numerous functions. This provides a secure environment for investing in crypto and for trade and transactions. The blockchain allows users to easily increase their earnings through variable period staking, where they can receive bonus GSX and redeem GSX's growth in value after a set time period.

UNDERSTANDING THE GSX ECOSYSTEM

The ecosystem that the gold-backed crypto tokens operate on is extremely secure. Firstly, it provides those investing in crypto with a decentralised platform to have a secure space to trade-in. The stable cryptocurrency is backed by land, the metal industry as well as gold itself. Therefore, it ensures those investing in crypto an assured value. The asset's profits would increase uniformly with time, giving investors a reason to own the gold-backed crypto token.

Apart from this, the ecosystem is planned to be audited regularly. This would ensure that the ecosystem is transparent and accountable. Even the blockchain technology that this stable cryptocurrency operates on is transparent and assures the investors that their crypto investment is secured. The blockchain that the GSX gold crypto tokens operate on is immutable and, therefore, incorruptible. The blockchain ensures that all transactions taking place on the platform are secure. The most enticing feature of the blockchain is its quantum resistance.

The GSX gold crypto tokens will possibly raise the standard across the entire range of stable cryptocurrencies. The GSX gold crypto tokens have the capability of commanding a new standard in the marketplace. This prediction can be made since the stable cryptocurrency is based on gold. Compared to most stable coins, the characteristic of the GSX gold crypto tokens being backed by gold and being able to grow in value as a traditional cryptocurrency is a huge incentive.

HOW DO THE INVESTORS EARN PROFIT?

BENEFICIARIES TO THE PROFIT

As a holder of the gold-backed tokens, the investor is a trust beneficiary of the land rights. The company and the land have been put under a trust that ensures the GSX holder is a beneficiary and shares in the value generated by the assets. Apart from this, the gold-backed tokens are also redeemable against the price of gold.

WHAT DRIVES THE VALUE OF GSX?

The value of the GSX is supplemented by gold reserves and gold-related assets held by the company. It is supported by gold and other metals mined. The gold-backed token is also supported by the gold-rich land owned in the trust, whose value is predicted to increase. The GSX token comes along with several features. The commissions from GSX transactions subsequently support the parent company's infrastructure and influence the ecosystem that it operates on. Additionally, 50% of the tokens that would be remaining after the completion of the Coin Distribution Event would be burned, and their value would be added to the remaining tokens.

THE PRICE OF GOLD AS A VALUE-DRIVING FACTOR

The value of gold itself, the proceeds from mining the gold, the proceeds from mining other metals, and the various methods adopted by the parent company all culminate in raising the price of the GSX. Gold itself serves as a valuable asset universally. Therefore, as the value of gold rises in the market, the value of this stable cryptocurrency will also increase.

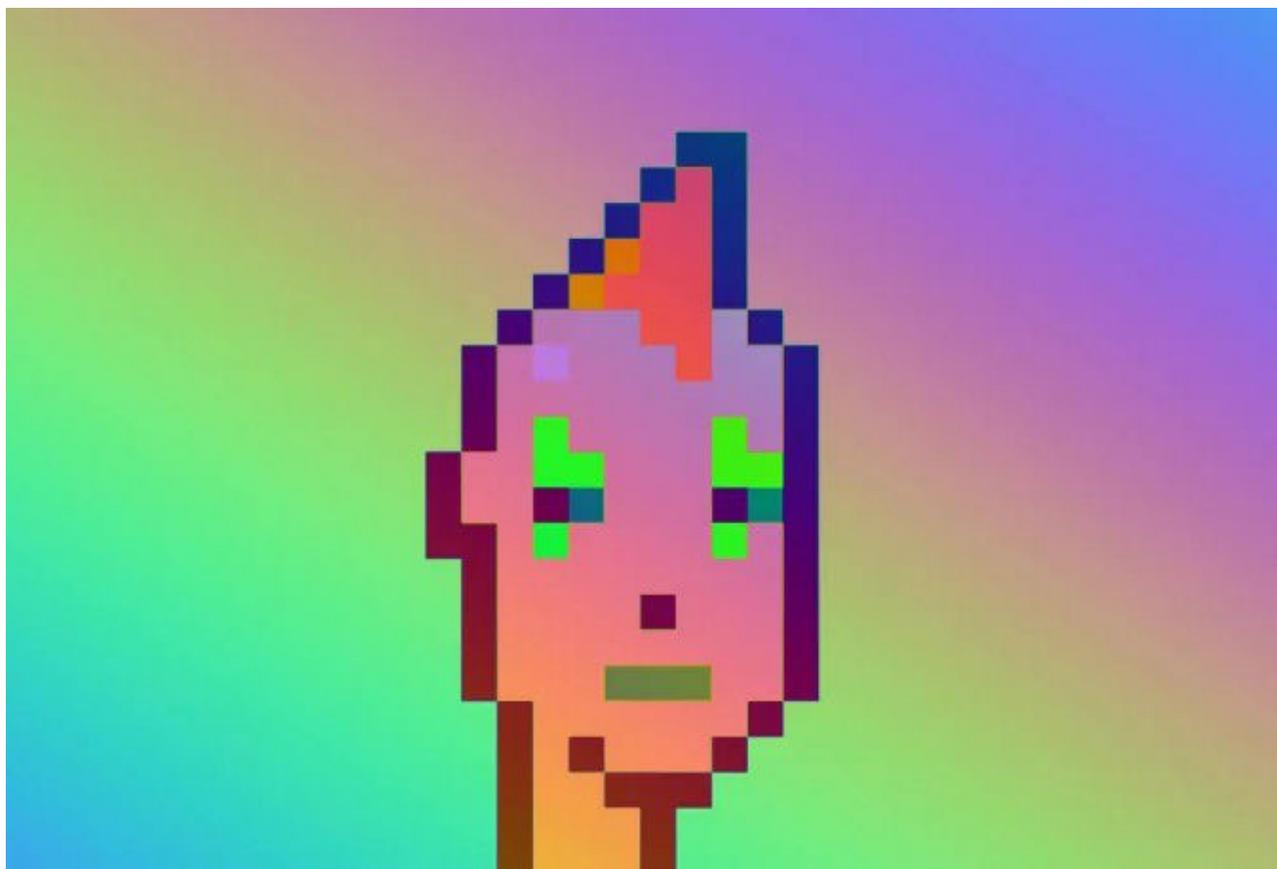

As mentioned above, the parent company of the gold-secured currency has created a trust comprising several acres of gold-rich land. The token's value is proposed to be increased based on increased gold production from the mentioned land, as the company intends. As the stock of gold within the company increases, the GSX gold crypto tokens would also be backed using revenues generated from the production of such gold. Additionally, the backing to the growth of GSX would also come from revenue generated through other endeavours of the parent company.

CONCLUSION

Although gold backed tokens already exist in the market, the GSX ecosystem comes with the additional surety of being a transparent ecosystem and combines traditional cryptocurrency growth. This can be discerned by GSX gold crypto tokens operating on a transparent blockchain, and third-party audits will be held regularly. The sensitive nature of traditional cryptocurrencies makes them very vulnerable and highly volatile to invest in. However, the GSX gold crypto tokens come with assured security, stability and incentives for anyone investing in crypto.

Most of the cryptocurrencies in the market are not characterised as liquid. However, this growth coin comes with the unique characteristic of being highly liquid since it can be redeemed against the price of gold. All these characteristics and the entire ecosystem surrounding the GSX gold crypto-tokens make it revolutionary, and its introduction is set to probably change the cryptocurrency market space forever.

CryptoPunk NFTs Break Sales Record as Visa Sparks Buying Frenzy

Monday set a new sales record in CryptoPunks for a single day, and August sales have also set a monthly record, with prices for the NFTs averaging nearly \$200,000.

Sales of CryptoPunk non-fungible tokens (NFTs) are soaring to new record levels, in another sign of just how frenzied the market has become as credit-card giant Visa jumps into the fray.

On Monday, sales volumes of CryptoPunks topped \$86 million, a daily record, according to data from the industry tracking website CryptoSlam.

And sales so far in August have already reached \$332 million. Prior to August, the largest single monthly sales total was \$135.2 million during July. This month's average price for a CryptoPunk is \$199,069, more than double last month's average.

The market is so hot that Visa apparently had to pay up for its CryptoPunk purchase, announced Monday. According to CryptoPunks creator Larva Labs, the NFT that Visa bought – CryptoPunk #7610 – was acquired for a price of 49.50 ether (ETH, +0.84%) (ETH), which works out to about \$150,000. That's more than double the price of 21.75 ETH paid less than a month ago by a user named "gmoney."

THE BANKING STACK FOR DEFI

WHY MELD?

MELD is the first DeFi, non-custodial, banking protocol. You can securely lend & borrow both crypto and fiat currencies with ease and stake your MELD tokens for APY.

CASH LOANS

Get an instant loan against your cryptocurrency holdings at a competitive APR or get a credit line and only pay interest on what you use.

BUILT ON CARDANO

The MELD protocol is built on the Cardano blockchain, a next generation blockchain delivering fast, safe and cost effective infrastructure for a new generation of DeFi.

BORDERLESS AND DEMOCRATIC

Economic and political changes can't alter MELD's smart contracts. Our DeFi protocol is safe from changing laws or unexpected events.

PROTECT CRYPTO HOLDINGS

Don't let today's small expenses erode your crypto investments. Leverage the value of your crypto to borrow cash when you need it.

DECENTRALIZED AND TRUSTLESS

A world-class DeFi protocol, MELD uses smart contracts to ensure complete transparency and fairness for all parties.

STABLE YIELD EARNINGS

Let your crypto work for you. Earn yields from our staking pools as well rewards in the MELD token.

THE MELD Initial Stakepool Offering

or ISPO is a new and unique method for fundraising that is community oriented and safe for all parties involved. To participate, you simply delegate your ADA in your Yoroi or Daedalus to the MELD staking pool and 100% of the rewards go towards fundin

g MELD. Based on the amount of rewards generated and duration your ADA is staked you will be airdropped MELD tokens on launch. We are launching the ISPO before the private sale to give everyone the opportunity to join in early and reap the rewards.invidunt ut labore et dolore magna .

JPMorgan, Wells Fargo Move To Launch Bitcoin Funds in Collaboration With Crypto Giant NYDIG

Banking titans JPMorgan and Wells Fargo are gearing up to launch new Bitcoin funds in collaboration with crypto giant New York Digital Investment Group (NYDIG), according to filings with the U.S. Securities and Exchange Commission (SEC).

NYDIG is a Bitcoin-focused technology and financial services company and subsidiary of investment management company Stone Ridge Asset Management.

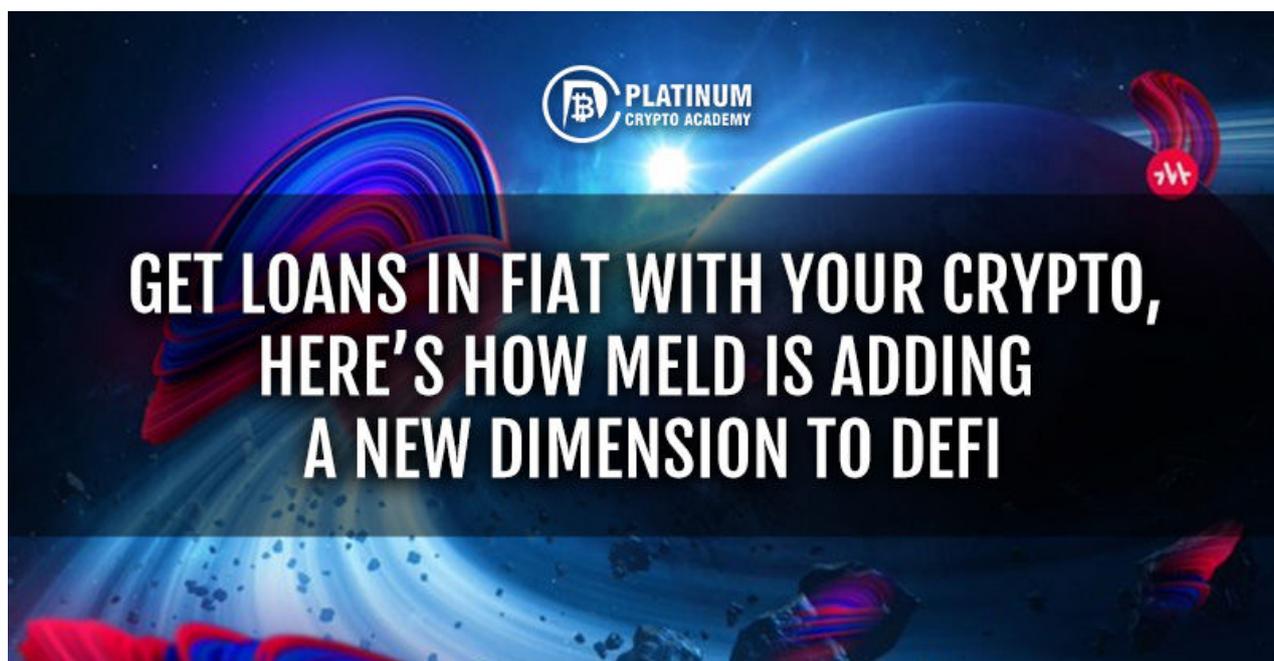

SEC documents show that Wells Fargo is on the move to launch a Bitcoin fund in partnership with the NYDIG. The banking giant will receive placement and servicing fees as they refer clients to NYDIG, which is the fund's issuer.

JP Morgan is also teaming up with the crypto giant for a new Bitcoin fund, according to an SEC filing. The NYDIG will act as the fund's issuer, and JP Morgan will earn servicing and placement fees for referring clients to NYDIG.

In July, JPMorgan announced it would be allowing all wealth management clients to access Bitcoin and other crypto-focused funds. In April, the company announced that it would be offering Bitcoin investments to its wealthy clients, also using NYDIG for custodial services.

GET LOANS IN FIAT WITH YOUR CRYPTO, HERE'S HOW MELD IS ADDING A NEW DIMENSION TO DEFI

The challenge to encash crypto is still one of the biggest bottlenecks in the mass adoption of cryptocurrencies and the mainstreaming of decentralised finance (DeFi). Over the past decade, cryptocurrencies have evolved as a distinct asset class – and evidently, the more profitable compared to traditional investments like stocks and precious metals. For a significant majority, the idea that cryptocurrencies are “real money” lacks conviction. It is because of the limited real-world utilities of cryptocurrencies.

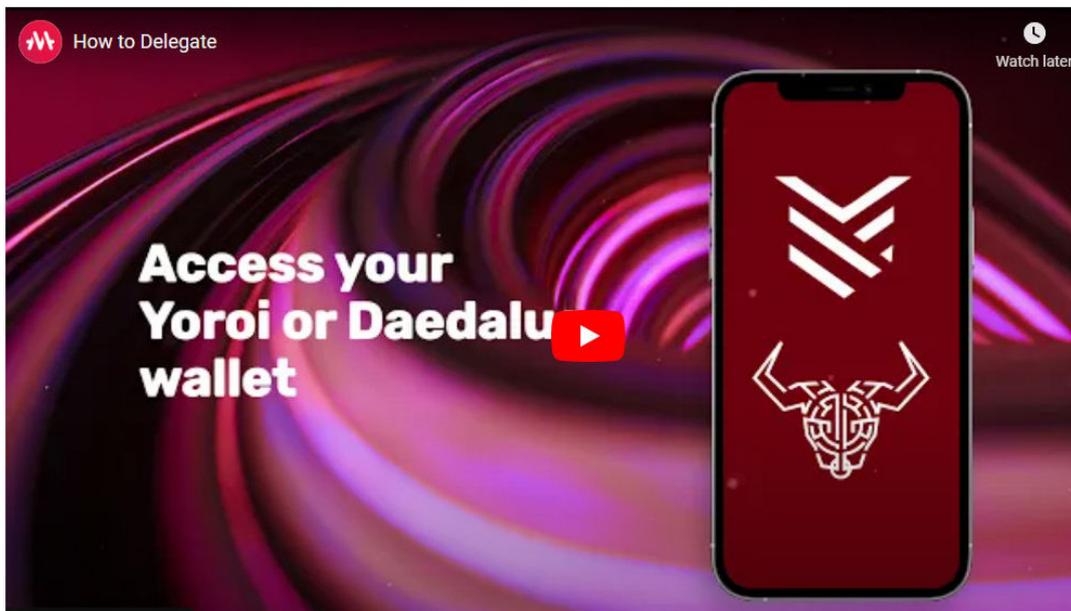

There is no doubt that cryptocurrencies are valuable digital assets. However, if cryptocurrencies are to accomplish the unique goal of the blockchain revolution – which is to create an alternative decentralised financial system – they must be seamlessly interchangeable with cash. Once the divide between fiat and crypto is flattened, only then will we be able to see blockchain-driven digital assets becoming a product of the masses.

Taking the challenge head-on, MELD, a Cardano-based DeFi protocol, is now bridging the gap between fiat and crypto, and is not only making them seamlessly interchangeable for users but is also adding new dimensions to the world of decentralised finance by making its exclusive services easily accessible to all by, providing no questions asked fiat loans against crypto collaterals.

INTRODUCING MELD

MELD is one of the top DeFi projects on the Cardano network, created by MELD Labs. MELD explains itself to be “an open-source, non-custodial liquidity protocol for borrowing fiat (USD and EUR) against crypto collateral and earning yield on deposits”. Simply put, it is a DeFi project that allows anyone to use their crypto assets to get instant cash loans and also allows investors to leverage their fiat investments to generate better returns. In addition, MELD also provides a range of products, including MELD debit cards, which can also be used to open a line of credit against crypto investments. The goal is to provide access to decentralised financial tools to all and eliminate the barriers to entry for even the unbanked. In effect, MELD brings conventional banking services to the world of decentralised finance.

The project is led by a team of industry experts who have carefully crafted the protocol to deliver on the vision of connecting the financially marginalised and investors of all depths to one platform where they can enjoy the perks of DeFi. One of their advisors, Christian Katz, is a former CEO of the Swiss Stock Exchange. His presence in itself is a testimony to the fact that MELD is here to make shape-shifting changes to the world of finance. Also, the technical team behind MELD is one of the most experienced. In fact, MELD has the biggest tech team of Haskell Engineers, working behind the scenes, which makes [Hachi](#) & [ADAmatic](#) possible for MELD.

HOW FIAT LOANS AGAINST CRYPTO WORK

MELD protocol allows users to get cash advances against their crypto holdings. The ecosystem is designed to allow fiat liquidity providers to lend fiat to meld protocol. Investors can seamlessly lend cash and earn interest using MELDapp. Lenders earn a high rate of interest on their lent portfolio as MELD leverages multiple different sources to generate the interest paid to lenders on the platform. Borrowers are charged interest and the proceeds from “trading fees APY from the Vaults of MELDed assets” is also distributed to liquidity providers.

Borrowers can get cash loans in popular fiat currencies against their crypto holdings. It is a simple process. To borrow cash against crypto, all that a borrower has to do is to deposit their acquired tokens to a MELD loan smart contract. Initially, the MELD protocol will support Cardano (ADA), Bitcoin (BTC), Ethereum (ETH) and Binance Coin (BNB). Once the user deposits their crypto holding to the MELD loan smart contract, they become eligible to get up to 50% of the value deposited as a cash advance. Alternatively, users can also use their deposit to get a credit line, which would allow them to withdraw cash when they need it and pay interest only for the time they need cash. As such, MELD is offering a full suite of lending services against crypto collaterals, similar to conventional banking. The best part is that borrowers get instant cash with no strings attached and the fiat is transferred directly into the borrower's account. MELD also provides a **debit card** that can be used to get credit against crypto collaterals.

To repay their fiat loans, users can choose to pay monthly interest and continue the loan or they can pay it all when they want and settle the account. Once the payment is made in full, the crypto collateral locked in the MELD loan smart contract gets automatically unlocked and the crypto assets are returned to their owners. To protect investors or liquidity providers, MELD allows lenders to withdraw their "fiat" investments at any point in time. Also, in the event of any crypto-backed fiat loan facing a liquidation issue, the collateral is converted to fiat to ensure that liquidity providers don't lose their cash. The entire process is simple and makes DeFi easily accessible, while protecting the interest of investors and taking care of the needs of the borrowers.

It is important to note that borrowers who deposit crypto as collateral don't have to partake with their holdings to get a secured loan with MELD protocol. They continue to be the rightful owners and have their keys. As such, borrowers continue to use fiat loans and also benefit from the increase in the value of their crypto holdings. MELD also ensures the entire process is fully compliant with local regulations. All users, including the lenders and borrowers, have to participate in the KYC and AML procedures while "depositing fiat, withdrawing fiat, receiving loans, and paying loan interest".

WHAT BENEFITS MELD PROVIDES TO PRIVATE INVESTORS

The core idea that drives the MELD ecosystem is to bring financial empowerment by providing access to financial tools to all including small investors and even the unbanked. By making lending and borrowing seamless and equally profitable for all stakeholders, MELD is surely gearing up to give conventional financial intermediaries a run for their money. MELD's products are meant for investors of all shapes and sizes, but we believe it is particularly useful for private retail investors who have always felt to be at the receiving end at the hands of big institutional investors who can operate at minimum margins. Here's a list of key benefits that MELD offers to private investors:

1. Easy and secured opportunity to generate income from their investments: By not putting a cap on who can become an investor, MELD protocol allows even small retail and private investors to tap into the DeFi market and earn secured and fixed interest on their investments.

2.Secured investments: While the returns are guaranteed, the investments are secured because liquidity providers have their investment secured by crypto assets worth 2X the loan. Also, in the event of liquidation issues with the borrower, MELD automatically converts the crypto collaterals into fiat and redistributes them to the lenders.

MELD's white paper explains: "Loans are issued at a Loan to Value (LTV) ratio of 50%. If the collateral value falls to LTV 65% or stays above 50% for more than three days, a margin call happens. The customer must provide added collateral to bring the loan back to an LTV of 50%. The same happens if the LTV reaches 75%. If the LTV reaches 85%, a liquidation event is triggered where the collateral is converted to USD/EUR stable coins, equivalent to the fiat loan plus a 5% fee. The balance of the collateral is then transferred back to the customer, and the smart contract terminates. The customers keep the fiat they borrowed."

1.More profitable: MELD protocols have multiple different sources to leverage to provide investors with significantly better returns when compared to conventional investments. The APY with MELD investments is on par with the DeFi industry and up to at least 5X better than most conventional investments.

2.Accessibility: It's a hassle-free, no-fuss protocol and after simple KYC and AML procedures, anyone can join the MELD ecosystem and become a fiat liquidity provider. There is no cumbersome and extensive paperwork required.

WHAT ARE MELD TOKENS?

MELD Tokens are the native tokens to the MELD ecosystem. They have several utilities on the platform:

1.Earning opportunity through staking: MELD is a DeFi protocol and users can stake their MELD tokens to earn static rewards. The protocol automatically rewards all MELD token owners who secure the network by staking their parked token holdings. Staking MELD tokens can be a great way to generate secured passive income. To protect token owners, the MELD staking pool acts as an insurance solution for protocol. The staking pool is specifically designed to mitigate any untoward losses that might occur due to impermanent loss (IL). MELD confirms that their APY for staking comes from 40% of all protocol fees, such as MELDed assets.

2.Governance: MELD tokens can also be used to participate in the governance of the MELD ecosystem. MELD operates as a decentralised automated organisation (DAO). All MELD token owners get to participate in the decision making. On the platform, "MELD holders can pay a small fee to open proposals that MELD stakers can vote on" through the MELD governance contract. Once a proposal is put to vote and it receives the required minimum participation and votes, the proposal is then forwarded for consideration and execution.

3.Early lender/borrower rewards: Early lenders and borrowers on the MELD protocol will receive rewards for their contributions. These rewards will be in native MELD tokens.

HOW TO GET \$MELD

The only way to get \$MELD currently is through their **Initial Stake Pool Offering (ISPO)**. An ISPO is a liberating new way for investors and the community to support MELD using the Cardano blockchain. Users who wish to participate in the MELD ISPO can delegate their ADA to the public MELD stake pools to start earning the MELD token. Delegators will be rewarded with either 100% MELD rewards OR 50% MELD and 50% ADA rewards **depending on the pool chosen**.

OPPORTUNITIES WITH MELD

When you think of MELD, think of the ecosystem as a full suite of conventional banking and finance services forked on a DAO model. MELD is bringing the entire range of conventional banking solutions to the world of DeFi by creating an ingenious advanced protocol. The opportunities with MELD are abundant. If you are an investor, regardless of your ability to invest, you can start earning up to 5X better returns than conventional investments from day one. The investments are secured as becoming a fiat liquidity provider secures your lent sum with crypto collaterals. Alternatively, if you want to get into staking for higher returns and rewards, you can also purchase MELD tokens and stake them to earn 40% of protocol revenues and generate a static passive income.

Those who need cash but don't want to part with their crypto assets can easily use their crypto as collateral to get an instant loan or a line of credit with MELD protocol. It is a win-win for both as borrowers continue to get benefits from the increase in value of their crypto holdings and also use cash when they need it. With a line of credit, users can use their crypto collaterals to own a product that is everything like a conventional credit card and can be used to withdraw cash as and when needed.

Moreover, MELD offers a range of products to make even newbies feel at home. The goal is to make decentralised financial services and opportunities available to all in a highly secure and hassle-free manner, while complying with all regulatory requirements. One can access all of MELD's products and services using one single app, the MELD DApp. The MELD DApp will be live Q3, 2021, and will be available for iOS, Android and as a web extension.

CONCLUSION

MELD is a next-gen protocol that provides all stakeholders with practical utilities. Making crypto-backed fiat loans seamless and easy, MELD is rolling out the most extensive DeFi Banking ecosystem that is solid on all fronts, including regulatory compliance and executive expertise. It is also one of the top projects on the Cardano network at present. The DeFi world is exploding. Coinbase, in its latest earnings report for Q2, posted a 4,900% year-on-year increase in revenue attributing the gains to the movement of institutional investors to DeFi protocols. MELD has all the potential to be a market leader as it dilutes the hard separation between conventional and decentralised banking and allows seamless and profitable interchange between fiat and crypto. It wouldn't be surprising if we see MELD taking the market by storm in the next couple of months.

Iran to Lift Ban on Bitcoin Mining Next Month

Earlier this year, Iran was responsible for an estimated 4.5% of Bitcoin mining globally.

Iran paused Bitcoin mining in May for four months due to power shortages.

The country legalized and began regulating cryptocurrency mining in 2019.

Iran will lift its four-month ban on cryptocurrency mining in September, according to a report from the Iranian Students' News Agency that was subsequently picked up by Iranian English news site Financial Tribune.

In May, President Hassan Rouhani put the temporary prohibition in place as the country's electrical grid came under strain due to high temperatures and energy shortages.

Today's declaration, from Iran Power Generation, Distribution and Transmission Company (Tavanir) spokesperson Mostafa Rajabi Mashhadi, indicates the Ministry of Industries, Mining and Trade plans to stick to its original resumption date of September 22, rather than extend the moratorium. The Financial Tribune reports that Mashhadi said Tavanir hopes electricity use will ease in the coming month so that legal cryptocurrency miners can continue operations.

beatbind

BeatBind connects musicians, venues, event organizers and fans to create the most memorable musicevents on Earth.

WHITEPAPER

PITCH DECK

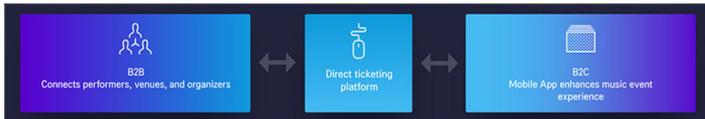

The Problem

Organizing an event of any size remains a slow and manual process, with high cost and connection barriers

- ➔ Quality performers or venues are hard to reach
- ➔ Lack of connections limits rising artists and new venues
- ➔ Agencies and middlemen are slow, inflexible, and expensive

The Solution: BeatBidder

World's first event organization & talent auction platform that lets artists and venues focus only on serving unforgettable experiences to their fanbase

- ➔ Music groups - let venues & organizers bid on you, **increasing your revenue**
- ➔ Event organizers - let musicians bid on your opportunity, **so you lower your expenses, and get the best**
- ➔ Venue owners - **outsource event organization** to the most passionate managers

COMING SOON

BeatBind AI

Providing revenue projections and other heuristics that helps all platform users to decide whom to hire, where to perform, etc. Our platform will use machine learning to produce revenue estimations to help you justify decisions in any part of the music event organization process. This will greatly reduce risk and spur even more growth. We believe this is just the step the industry needs to take to step out of the dark caused by the lack of data, and make better decisions.

Opensea's Record-Breaking Monthly NFT Volume Captures More Than \$1.5 Billion

30-day statistics show the non-fungible token (NFT) marketplace Opensea has captured \$1.564 billion in volume, according to data recorded by dappadar.com. Opensea's trade volume has increased by 542% over the last month and all-time statistics indicate that the NFT market has seen \$2.423 billion in trade volume.

Opensea's Monthly Trade Volume Skyrockets

Non-fungible token (NFT) sales have skyrocketed during the last 12 months and these digital images, worth millions of dollars, are swapped every day. According to statistics, the largest NFT marketplace is Opensea and a lot of NFTs are bought and sold on the platform.

Dune Analytics data indicates that as of Sunday, August 22, 2021, there are more than 245K unique Ethereum addresses that have leveraged Opensea at least once. The same Opensea dashboard data indicates that as of August 1, 2021, 965,477 NFTs were sold. Dappadar metrics show in 30 days, there were 149,907 traders using the Opensea market.

Last month's data in terms of NFT trade volume shows that Opensea broke a record by capturing more than \$1 billion in 30-day trade volume. In fact, at the time of writing, dappadar.com data shows that Opensea saw approximately \$1.564 billion in 30-day volume.

DIRTY FINANCE: A PASSIVE INCOME WITH HENTAI NFTS ON TOP OF REDISTRIBUTION!

This year, non-fungible tokens (NFTs) appear to have exploded out of the ether. These digital assets sell like 17th-century exotic Dutch tulips for millions of dollars. These can be anything from art and music to tacos and toilet paper. A digital asset that depicts real-world elements like art, music, in-game items, and films is known as an NFT. They're bought and traded online, often using cryptocurrency, and they're usually encoded with the same software as many other cryptos.

Even though they've been around since 2014, NFTs are gaining popularity as a more popular means to buy and sell digital art. NFTs are also one-of-a-kind, or at the very least one of very small runs, containing unique identifying codes. If a certain asset is in demand, cutting down the supply should theoretically increase its value.

Is it worth the money to invest in NFTs? Some experts believe they're about to burst. Others feel that NFTs are here to stay and will forever revolutionise the way people invest. There is a boom in the non-fungible token industry. Consequently, it's not surprising that Hentai Anime Studios are also converting their intangible assets to NFTs. You will learn about Dirty Finance and its DIRTY token in this article. You'll also receive instructions on how to exchange DIRTY tokens. DIRTY Finance is an NFT project. It emphasises dropping NFTs in the Hentai genre. Staking DIRTY Tokens lets you gain access to DIRTY Finance's NFT Marketplace and earn unique NFTs.

WHAT IS THE DIRTY FINANCE ECOSYSTEM?

Dirty Finance is a cryptocurrency project that focuses on non-fungible Hentai tokens. The project's anime authors are currently producing these NFTs. Dirty Finance is a cryptocurrency at the same time. Users can farm \$DIRTY to obtain \$DirtyCash tokens, which can be used to purchase Dirty Finance's artwork (non-fungible tokens). It's worth noting that the team uses a ranking system based on stars. The rarest NFTs are only available to big token holders. The most rare non-fungible Hentai tokens are only available to large token holders. NFTs' characters in full attire, on the other hand, have the lowest rating of 1 star.

DIRTY FINANCE OPPORTUNITIES

Dirty Finance has been in the crypto world for a few months and is now listed on Coinsbit.io, Bibox.com, and Tokpie, among other places. In just one month, the interest accumulated for redistribution to holders has increased by 6.8%. So, if you buy \$Dirty and the volume continues the same for the upcoming days, and the price keeps the same, your investment will increase by 80–100% in a year. With all of the infrastructure they're building, they obviously believe there are many opportunities for the price to rise.

At the time of launch, the circulation supply was 500 billion \$DIRTY. As a result, even without any other smart contract capabilities, all holders' market share has increased. For example, if you had held 5B at the start, you would have had a 1% market share of the 500B circulating supply. But, because they have burned 30B and the circulating supply is now 470B, the 5B held now has a market share of 1.06%. As a result of the reduced circulating supply, a holders' market share has climbed by 6%. Dirty is on top of the burn and redistribution; the sellable Hentai NFTs that only holders will be able to redeem (when available through the website) will provide a completely independent passive income.

Staking contracts will be released on Tuesday the 17th August and 12+ NFT's will be available to collect straight away. The introduction of staking is a landmark and is allowing dirty finance to use innovative, fun and profitable ways for holders to earn a passive income with the sellable NFT's whilst enjoying redistribution and burn. All holders that join the staking contract will receive 200 dirty cash and this amount will be more than enough to collect a 1 star dirty finance NFT straight away.

WHAT ARE DIRTY TOKENS?

The DIRTY token is based on the ERC20 standard. DIRTY's main benefit is that it gives you access to the rarest Hentai NFTs. The team will also release the Dirty Cash token. People are paying Dirty Cash tokens to redeem Hentai NFTs. People can also earn more Dirty Cash if they stake LP tokens if they want to earn faster.

DIRTY has additional value due to its tokenomics. The team began by burning half of the token supply. Furthermore, every transaction results in a 5% commission (due to an audited contract). As a result, the smart contract distributes a 5% commission: 2% is burned, 2% is sent to all holders, and 1% of all transactions is put into the project's growth fund.

To buy DIRTY tokens with ETH, follow these three simple steps:

- ETH can be used to fund your account. If you don't have any cryptocurrency, you can buy ETH with a credit card in a matter of minutes.
- Place your buy trade order in the DIRTY/ETH order book.
- Withdraw DIRTY tokens to an Ethereum wallet of your choice or keep them on the account.

Follow these three steps to sell DIRTY tokens for ETH:

- DIRTY tokens must be deposited into your account.
- Place your trading order to sell in the DIRTY/ETH order book.
- Withdraw ETH to your Ethereum wallet or keep it on the account.

WILL THE POPULARITY OF NFTS LIKE DIRTY TOKENS SOON FADE?

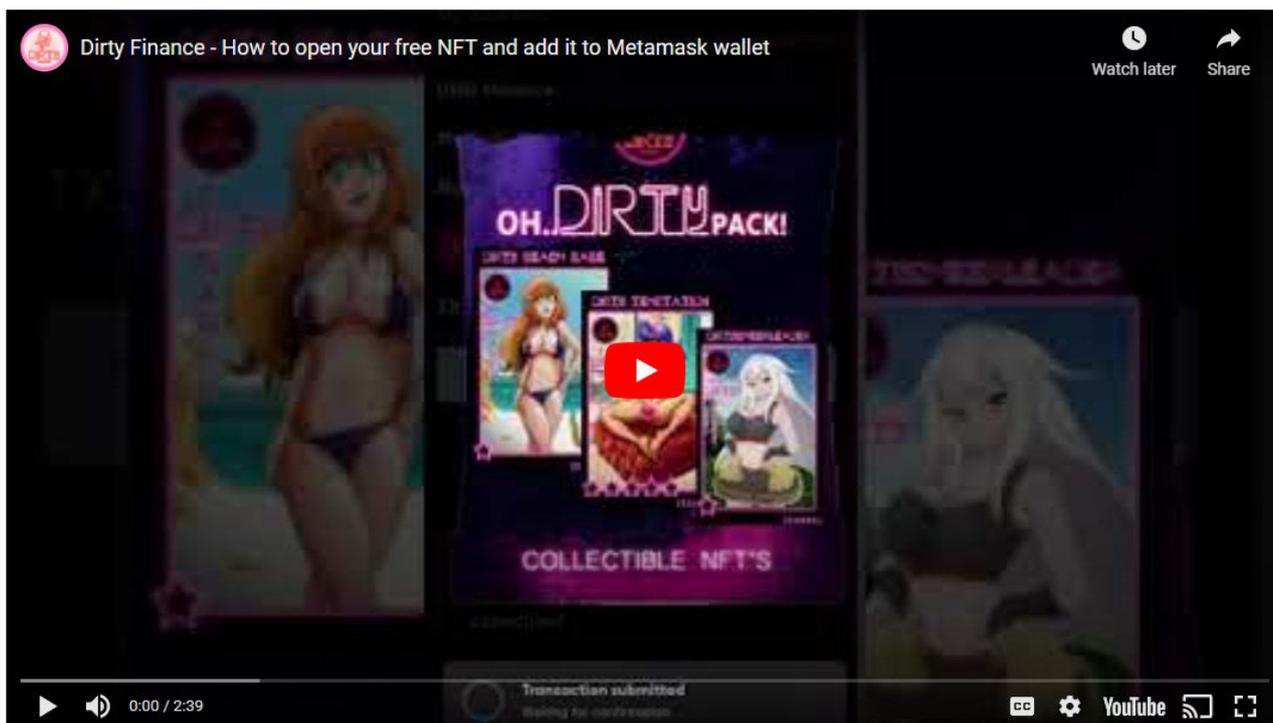

In our view, the answer is no. According to the New York Times, NFTs have been present since the mid-2010s, but their popularity has recently risen. So, what's driving the recent surge in popularity? One explanation, many experts believe, is the coronavirus. According to the NFT Report 2020, Covid-19 sparked a boom, with the NFT market valued at more than \$250 million in 2020 (via the Times). Ethereum, for example, has seen a significant increase in value over the last year. In other circumstances, it can be used to partially or fully purchase NFTs, and as the value of Ethereum assets increased, so did the underlying owner's purchasing power.

When it comes to introducing the world of Hentai to the crypto sector, Dirty Finance is leading the way. Investors are starting to take notice due to the massive release of staking and lp staking scheduled for 17th of August, 2021. They not only reward holders with a 2% burn and 2% redistribution per transaction, but they also reward them with exclusive original artwork NFTs. These NFTs can be sold on third party marketplaces like opensea.io.

THE REASON FOR ESTABLISHING DIRTY FINANCE NFTS

The Hentai genre was not accommodated in the NFT and crypto sector, so with over 10,000,000 monthly Google searches for 'Hentai', this firm established \$DIRTY; a token dedicated to this genre started just a few months ago and has a big market to expand into. Since their start, they've been hard at work collaborating (NSFW and SFW) with a slew of influencers who collectively have over 1,000,000 followers. To commemorate the relationship, Dirty Finance creates bespoke and unique NFTs. Some are SFW influencers, while others are adult job stars from Only Fans, etc. When holders of a \$DIRTY stake (just pay the minting cost), they will be able to collect all of the NFTs in the set for free. Otherwise, the only method to get these NFTs will be to buy them with \$DIRTY on our website or with Ethereum on Opensea.

Each artwork is animated, limited, and categorised by star rating (based on rudeness and scarcity) before being staked. There will only be a limited number of each star minted. The 6th star will only have roughly 6 in circulation and will be the rarest; as the stars go down, the amount produced will increase, and the model will have more outfits.

WHY AND HOW SHOULD YOU CHOOSE NFTS?

NFTs are likely to stay in popularity due to their concept of uniqueness and having access to something that no one else can have without the owner's voluntary decision to copy it. Paintings, baseball cards, and other works of art can be easily replicated, but NFTs offer actual single ownership, which appeals to many people. NFTs are also likely to keep appearing as blockchain becomes a more common way to prove ownership.

In some ways, NFTs are just another asset class supporting the rise of currency assets and blockchain exchanges. On the blockchain, land deeds and property ownership can be represented as NFTs that are automatically appraised in real-time. A soccer player's digital trade card might include performance numbers like goals scored, and the stats could be updated in real-time throughout the player's live game. NFTs might potentially be established for expensive or rare cars to represent real-time ownership and value transfers across the vehicle's lifetime. NFTs, like ordinary sports tickets, flights, and luxury hotel stays, can be offered as silent auction items. NFTs can also aid in protecting intellectual property rights by allowing the creator's IP to be tracked back to the digital asset.

Experts believe that there are numerous opportunities for investors seeking to gain exposure to the asset class through managed funds or individual NFTs. While these are exciting opportunities, investors should keep in mind that there is a danger of not selecting the correct NFT, ensuring the transaction is secure, and not understanding the asset's underlying worth. Before you buy an NFT, do your research, and if you're not sure which one to buy or invest in, wait until space matures. We believe that managed funds will be offered to investors, which will help to handle some of the challenges of diversification and risk.

WHAT DOES THE FUTURE HOLD FOR \$DIRTY?

The DIRTY token brings digital assets into the public eye. Still, they must prove that they can earn consumers' trust and evolve if they are to become the onramp for greater general adoption of blockchain-based systems. NFTs are quite popular in the art world, and many people mistakenly believe that art is the only use case when there is actually a multitude of them. NFTs have various applications outside of artwork, collector trading cards, and the game industry. Governments, for example, can issue digital passports linked to NFT counterparts on the blockchain to prevent fraud.

Therefore, the next safety deposit box is the DIRTY Token. People have trusted banks for decades to store their most valuable possessions in an airtight, fireproof box that requires a physical key or, in some cases, a code to open. On the other hand, the DIRTY Token is the 21st century and beyond's safety deposit box. The DIRTY Token can be a digital box that holds all of a person's most valuable collectables and papers, such as wills, testaments, jewellery certification and ownership, and critical financial documents, rather than a physical box.

CONCLUSION

The non-fungible token industry is booming. Famous singers, painters, and other non-crypto professions are increasingly embracing the ERC721 standard's benefits. As a result, it's no surprise that the Hentai anime industry seeks to wrap its intangible assets in NFTs as well. Dirty Finance is an ERC20 token that focuses on developing highly sought-after Hentai NFTs. Hence, the Dirty Finance platform will evolve alongside the NFT platform. This crypto opportunity based on Hentai is worth your consideration.

El Salvador president announces infrastructure already being built ahead of country's Bitcoin adoption

According to Nayib Bukele, there will be 200 ATMs and 50 branches capable of converting Bitcoin into U.S. dollars starting on Sept. 7.

Nayib Bukele, the president of El Salvador and the principal figure behind the country's adoption of Bitcoin (BTC), said residents will have the opportunity to convert their crypto to fiat immediately after Bitcoin is recognized as legal tender.

In a Sunday announcement on Twitter, Bukele said 4.5 million adults in El Salvador would have the option of HODLing their Bitcoin once the country officially accepted the cryptocurrency as legal tender or “withdraw[ing] it in cash at any of the 200 ATMs.” According to the El Salvador president, there will also be 50 branches capable of withdrawing or depositing fiat for residents to hold crypto or immediately liquidate their salaries.

Bukele previously said that the government would be building the infrastructure to support a state-issued Bitcoin wallet, called Chivo. The president claimed that “Chivo ATMs” will eventually be “everywhere” and allow El Salvadorans to withdraw cash 24 hours a day without paying commissions on their holdings, but no one will be forced to use them.

GSX Gold Secured
Currency

World's First Growth Coin

GSX offers the asset backing (currently estimated \$3.2 billion USD) of a stable coin, the growth of a cryptocurrency. Combining all of the best elements in cryptocurrency into one secured coin.

Backed by assets
Increases in assets continually
Trust backed

Buy Now

GSX Benefit

Backed

GSX is a growth coin backed by gold and land mineral rights and assets

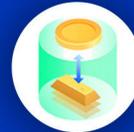

Audited

GSX will be continuously third party audited

Trust Ownership

GSX holders are the trust beneficiaries of the mineral rights and assets

Redeemable

GSX holders are the trust beneficiaries of the mineral rights and assets

Growth

Continual increase in asset value of land and gold backing GSX

Combination

GSX combines the best elements from a stable coin, cryptocurrency and investment coin

GOLD SECURED CURRENCY

Gold Secured Currency is the World's first growth coin and the first coin that rises in asset value. GSX gives its owners the benefits of having a minimum asset value, like a stable coin, while also facilitating growth in value like traditional cryptocurrencies.

As the trust backed assets grow, this will continually be adding to the value of GSX.

FTX Announces the First-ever Collegiate Crypto Naming Rights Sponsorship with Cal Golden Bears

Cryptocurrency exchange FTX's latest partnership is with the Cal Golden Bears, who will play their home games on newly rebranded FTX Field, starting this season.

The California university signed a 10-year naming rights deal for \$17.5 million with FTX.US.

In this first-ever collegiate cryptocurrency naming rights sponsorship, the signing amount will be paid entirely in crypto. Learfield will accept payment on behalf of the university, which will then pay Cal annually in cash.

While having no plans to accept crypto payments at this time, Cal said they "will consider how it can offer this at the right time."

Earlier this year, FTX won the naming rights to the area of the Miami Heat, FTX Arena, naming rights to eSports team TSM, partnered with MLB, and struck a deal with Tom Brady.

Through this historic agreement, FTX has received the naming rights to the field at California Memorial Stadium, which will now be known as FTX Field at California Memorial Stadium.

CONNECTING MUSICIANS, ORGANIZERS AND FANS, BEATBIND IS SCRIPTING THE FUTURE OF MUSICAL EVENTS

Music is something that everyone enjoys. Music has become an integral aspect of human life, regardless of genre. Music is not just simple entertainment, but it is a large industry.

As the music industry grows rapidly, individuals and companies are coming up with innovative ways to use blockchain technology. BeatBind is the result of such an innovative idea. This article covers a BeatBind review and discusses the BeatBind utility token, a new innovative crypto project targeting the music industry. The BeatBind utility token will allow music lovers to book tickets using cryptocurrency.

A BRIEF OVERVIEW OF BEATBIND

The worldwide music industry is estimated to be worth \$53.77 billion and is continuously growing every year. This all comes from the sale of tickets, albums, digital downloads, and so forth. The music industry has a lot of promise and will keep growing in the future.

BeatBind is a music event organizer using blockchain technology for the first time in the music industry. It is a blockchain event organisation and talent auction platform. Through it, performers, venues, event organizers, and fans combine forces to create the most unforgettable music experiences on Earth. BeatBind aims to be the long-awaited platform for organizing music events using the BBND utility token. BBND is BeatBind's utility token, serving as the global currency for all transactions.

WHAT PROBLEMS BEATBIND SOLVES

The music event sector is trailing far behind other industries in adopting open digital solutions. Scams and fraud in the ticketing industry undermine the value of many event organizers. Moreover, there is no data gathering in the event business, which causes revenue forecasts to be inaccurate. The situation is equally hazardous for performers, venues, and fans.

BeatBind hopes to handle each of these issues through the development of its platform and the wider ecosystem. The main aim is to make it as easy as possible for all participants in the event organisation ecosystem to connect and engage. It will take advantage of the huge demand for the best artists, organizers, and venues by leveraging multiple auction models. These auctions result in drastically enhancing the artist gig fees.

BeatBind will provide a better opportunity for emerging artists, both locally and globally. Additionally, fans will be able to buy tickets directly from event organizers via BeatBind. It results in reducing fraud, forgeries, and ticket scalping. This new, free market will include the establishment of all kinds of events, from concerts to exclusive private parties. As the platform grows, the barriers to admission for all parties will be dramatically reduced. Finally, as the official token, BBND will capture a significant portion of the new value created on BeatBind for the first time in the world.

BeatBind is establishing a multi-stage business model, with each level serving as a foundation for and accretive to the next platform level. This is done to address each of the industry's four major concerns by establishing the following solutions.

BEATBIDDER

BeatBidder is a platform that connects venues, DJs, artists, and all other parties engaged in the music event. This event planning helps to deliver a valuable experience for everyone. BeatBind uses auction methods to raise revenue for the most in-demand DJs and venues. Moreover, it removes barriers to entry and minimises expenses in the industry due to the sheer size of the market.

BEATBUY

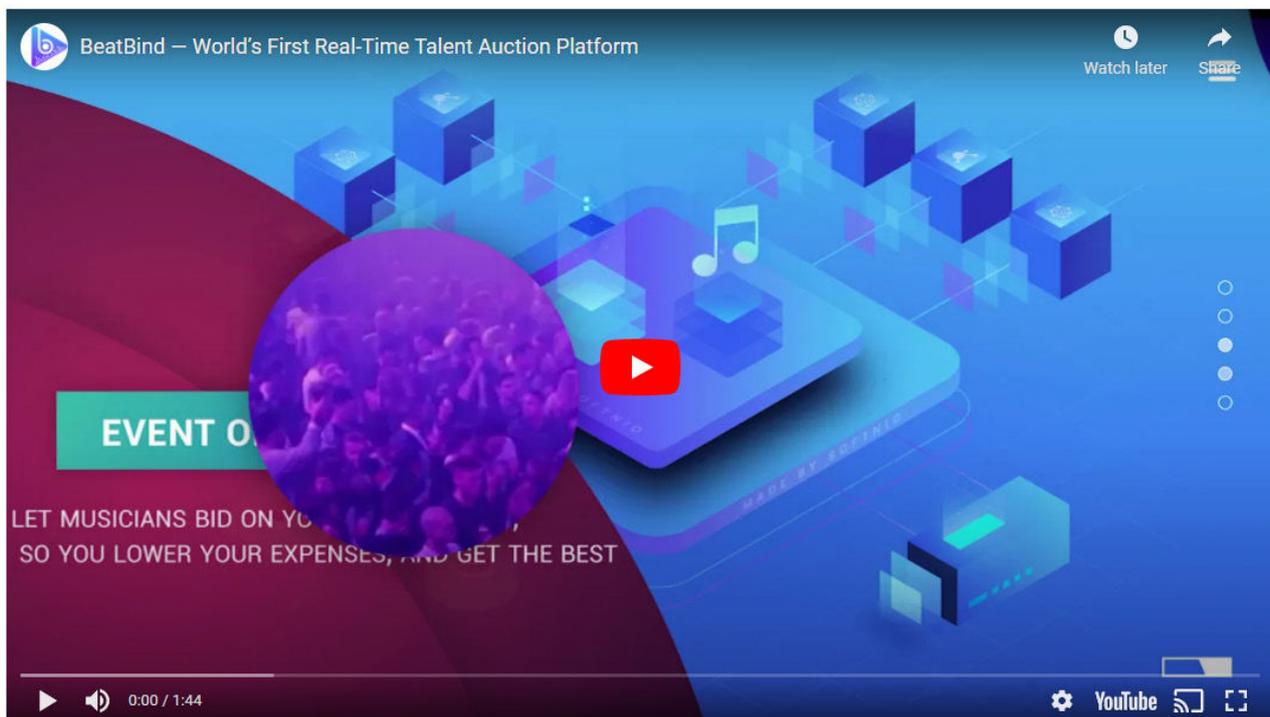

BeatBind events organised through BeatBuy will include ticketing as a standard feature. BeatBind fans will be able to get tickets directly from the band, lowering the entry barrier. Apart from removing those obstacles, BeatBuy also does away with the unnecessarily high fees charged to event participants.

BEATX

The BeatX app allows fans the power to shape the event they're attending. This also shapes event-related experiences like social networking and in-person interactions. Fans will have access to newsfeeds and will be able to participate in various ways to assist the organizers in better shaping the event. BeatBind uses a strict escrow procedure for refunding money in the event of failed transactions. Furthermore, it also resolves disputes between venues, artists, and event organizers to protect everyone and ensure integrity.

BEATAI

Machine learning is used by BeatBind's AI technology to provide revenue estimates. These estimates will be helpful for venues when justifying decisions throughout the planning process. It provides income estimates and other data. That helps all users decide who to recruit and where to perform, and other matters that will reduce risk and lead to even more growth.

WHAT IS BEATBIDDER?

The BeatBidder platform connects venues, DJs, musicians, and any other parties in the process of organizing a music event. Through BeatBidder, venues can access an international pool of musicians, thus filling their entire calendar with rewarding events. Furthermore, BeatBind will allow venues to bid on well-known DJs and increase their fees as the demand grows for them. It is also benefiting venues that would not otherwise be able to reach them.

If you are an event manager or you want to host an evening performance at your place, the BeatBidder search can help you to find a local artist available on your date. The first result of the search list will show you some prominent performers according to your needs. You will be able to check the DJ's experience, talent, and popularity through their track record. Also, BeatBind helps venues with revenue estimates for their chosen artist while at the same time allowing organizers of the event to use a crowdfunding feature to offset the cost of the event.

HOW BEATBUY OFFERS A SMART TICKETING SOLUTION

BeatBuy is one of the amazing features of BeatBind that offers a smart solution to the true fan base. Fans will get direct access to every BeatBind event through BeatBuy without any entry hurdle. This eliminates ticket fraud and the emergence of secondary markets. BeatBuy will remove these roadblocks, putting money back into the hands of musicians, organizers, and all other businesses engaged in producing a music event.

Additionally, if you want to return tickets due to any issue, BeatBuy offers users an option to return tickets and get refunded. Also, if you are a true fan of any performer and want to pre-purchase the tickets, you can do it as well. BeatBuy offers you the option to pre-purchase tickets for any event organized on the BeatBind multi-layered platform.

BENEFITS OF USING BEATX

BeatBind created this application specifically for fans. The app includes event-specific features such as newsfeeds, reviews, dating and connecting, and direct ticketing. It allows BeatBind fans exclusive rights to vote on a concert music programme. Besides the pre-concert selection vote, the fans can also vote to reduce the compensation of artists who perform poorly.

Almost every regular concertgoer has experienced a frustrating moment – one in which an alcoholic singer muttered a few lyrics before stabbing his followers and abusing them – but not BeatBind fans. Unlike other platforms, BeatBind hears your dissatisfaction in cases like this. You can show your dissatisfaction through the voting process. As a result, the fans will be partially compensated if they did not live up to the crowd's expectations.

If you want that DJ to play your favorite song or any song you want to play for someone, you can bid for that song. These platforms allow their fans to bid for their song. Eventually, the song that wins the contest will be played by the DJ. In short, you will get a completely different experience due to the BeatX fan based app that would allow you to experience music like never before.

WHAT MAKES BEATBIND PROMISING?

Perhaps you've been to a music event where your favourite musician performs. Thousands of people are expected to attend this event to witness their favorite artist perform. It is normal to see this occurrence for music organizers as well. Organizing music events is stressful because it is hard to coordinate musicians, advertise music events, sell tickets, etc. Having a small network makes it difficult for music promoters to receive aid. This is a prevalent issue when it comes to planning music concerts.

BeatBind is a platform designed to help people organise music events. Musicians, venues, event organizers, and fans can all connect and support one another using BeatBind. There are no issues with quality performers, a lack of connections, or agencies. It is because venues and organizers can bid on artists, and similarly, artists can bid on event organizers. The venue owners may outsource event organisations to managers using the BeatBind multi-layered platform. All parties involved in the music events sector will benefit in this way.

BeatBind isn't just for event planners and musicians; it's also for you, the enthusiast. BeatBind allows users to connect with other BeatBind users via the BeatBind application. Fans may buy tickets or raise funds for BeatBind Events using this app. This allows fans to engage with one another while also reducing fraud, forgeries, and ticket scalping.

BeatBind's ultimate goal is to become a universal token for the music business. BeatBind supports the use of its new crypto token for music genres. Additionally, BeatBind is an innovative crypto project since it offers a trusted, low-cost alternative to traditional payment methods. The BeatBind token (BBND) is a utility token that serves as the medium of exchange for all BeatBind platform transactions. It will also strive to unify all payment systems in music events. So, there will be no more physical chips, cards, or dozens of different currencies for events. BeatBind aims to collaborate and partner with the music industry to make the BeatBind utility token a universal and natural payment solution.

BeatBind's technology combines cutting-edge components with battle-tested technologies to enhance performance and increase flexibility. BBND tokens are based on the ERC20 standard and are managed on the Ethereum blockchain. BeatBind also uses smart contracts and guarantees its security by using the Ethereum blockchain. Such revolutionary features of BeatBind make it promising. It will change the look and feel of the music industry, enabling people to experience live music like never before.

CONCLUSION

Globally, there are an estimated 375 million active music fans, contributing to a music market that is worth \$53.77 billion. The data shows that the global music industry has a lot of potential and will continue to grow in the future. Organizing concerts, however, is typically difficult, despite the tremendous market potential. Many organisations have to deal with problems such as lack of quality artists, poor connectivity, and delayed third parties. An event involving music is slowed down because of this issue.

With BeatBind, concerts, parties, and festivals will be transformed into new experiences. The barriers to admission will be significantly lowered as the platform grows. BeatBind promises to increase artist booking rates by using multiple auction formats. BeatBind also harnesses the tremendous demand for top performers, event organizers, and venues. BeatBind offers emerging artists greater opportunities, both locally and abroad. Furthermore, fans will be able to purchase tickets directly from event organizers via BeatBind, which will reduce fraud, forgeries, and ticket scalping.

For more information, we invite you to visit www.beatbind.io or go to www.stex.com to learn more about BeatBind (BBND).

Cardano Reaches All-Time High As Rally Reaches New Heights

The price of Cardano (ADA) has reached an all-time high of \$2.64 this morning.

The price of Cardano (ADA) has reached an all-time high of \$2.64 this morning, breaking the previous record of \$2.54 set on Friday. ADA now trades for \$2.58, up 4.5% from yesterday, according to data from crypto metrics site CoinGecko.

Cardano is the native token of the eponymous blockchain project helmed by Ethereum co-founder Charles Hoskinson. The altcoin overtook stablecoin Tether on August 13 as the third-largest cryptocurrency, with a market cap of \$82 billion. ADA's up 17% over the past week and 116% in the past month.

Cardano's price surge began in earnest on August 10, when Hoskinson "pre-announced" the date when smart contracts would be integrated on the platform as part of the Alonzo network upgrade later this year. Three days after that "announcement of an announcement," the development company behind Cardano, Input Output, disclosed the date as September 12.

Last month, Cardano received a big boost when investment firm Grayscale's Digital Large Cap Fund included the asset in its portfolio. As of this writing, 4.26% of the fund is invested in ADA. 67.47% of the fund is held in Bitcoin and 25.39% in Ethereum.

Kenya does more peer-to-peer crypto trades than anywhere else in the world

According to Chainalysis, Kenyans lead the world in crypto P2P trading.

According to the recent Global Crypto Adoption Index 2021 report by Chainalysis, Kenya leads the world when it comes to crypto transactions in terms of peer-to-peer (P2P) trading.

The East African country's peer-to-peer exchange trade stands ahead of the over 150 surveyed countries, ahead of other African superpowers like Nigeria, South Africa, and Ghana.

The report had used an index that accounted for the purchasing power parity of the country's currency while also putting the Internet penetration of the country into consideration.

Weakening Kenyan Shilling is pushing people to crypto

It was deduced that the weakening national currencies in these countries played a role in pushing P2P trading higher. In Kenya for instance, the Kenyan Shilling has depreciated by 6.3% against the US dollar since January. This could grow much higher because the economy of most of these countries is still battling with the delta variant of the coronavirus epidemic.

As stated in the report, *"many emerging markets face significant currency devaluation, driving residents to buy cryptocurrency on P2P platforms in order to preserve their savings."*

Apart from the falling value of their national currency, another reason for the growth is tied to the faster and cheaper way cryptocurrencies allow for remittances back home.

INVESTORS ARE EXCITED ABOUT GAIN PROTOCOL THE HOTTEST STATIC REWARD TOKEN

The DeFi ecosystem is booming, to say the least. The biggest advantage with DeFi protocols is the potential to generate a substantial passive income with minimum investment. However, with more and more investors actively diversifying their conventional portfolios and investing in DeFi protocols, rug pull and scams are mushrooming.

It's concerning and explains why one must learn to distinguish between brilliance and mediocrity when choosing where to invest. At the Platinum Crypto Academy, we actively help traders and investors learn and make informed decisions. Here, we introduce you to a super-exciting and promising DeFi project – Gain Protocol – that's grabbing eyeballs for all the good reasons, which we explore in our in-depth Gain Protocol review.

TRUST IMBALANCE: WHAT'S WRONG WITH MOST MAKE-MONEY-FROM CRYPTO INITIATIVES?

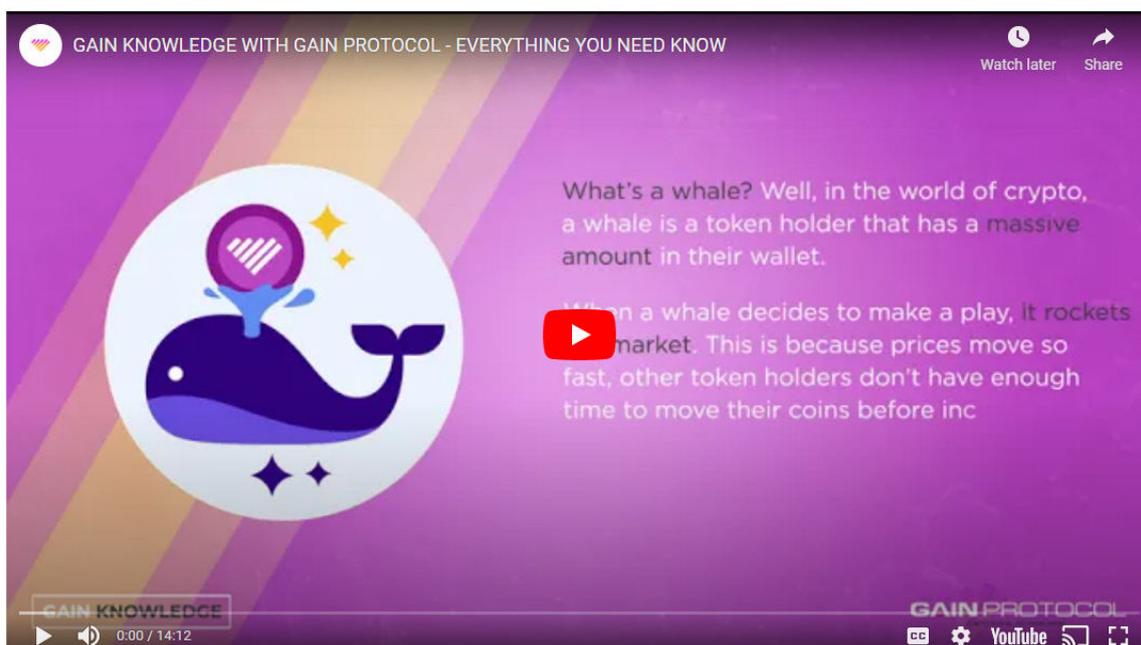

As DeFi makes it easy to enter a whole new world of finance with endless opportunities, the number of "options" positioning themselves as the ultimate make-money from crypto alternative is growing indiscriminately. Most of these projects have an inherent trust deficiency. With no vision or value, a significant majority of the projects mushrooming each week, get busy selling themselves as one

of the best fixed-reward tokens. Many investors have been preyed upon by organised groups of cybercriminals masquerading as blockchain pioneers dedicated to creating the most profitable DeFi solution. One of the key aspects of becoming a successful investor is to make informed decisions. However, we do acknowledge that the complexities involved in distinguishing DeFi projects based on their technical architecture and underlying infrastructure is beyond the abilities of an average investor. It leads to a growing trust imbalance. Most make-money-from-crypto-projects have nothing to fill the gap because investor protection and risk mitigation is what they are least concerned about. This is exactly where Gain Protocol represents investor interests. It ensures the highest levels of protection to the most vulnerable. As soon as the project hit the market, it has had an overwhelming response from the community. Because many investors are already excited about Gain Protocol's static rewards tokens, we believe they deserve an introduction as one of the top DeFi projects worth your time and money.

INTRODUCING GAIN PROTOCOL

Gain Protocol is one of the top DeFi projects with unique fixed rewards tokens to help investors create a fixed static income for themselves with their parked crypto assets. It also provides investors with the highest levels of transparency and security with their Whale Protection design, which keeps your investments safe from the market manipulators with big pockets. The Gain Protocol ecosystem features seven different ingenious protocols to protect investor interests.

Gain Protocol also features some exciting, unique opportunities through Sweepstakes, which allows token owners to earn exciting rewards every week. Its community-driven approach puts retail and individual investors at the forefront and extends the opportunity to earn big with crypto investments to those with limited means. The fixed rewards DeFi tokens that drive the Gain Protocol ecosystem are unique tokens built on the Binance Smart Chain (BSC).

Its distinguishing static rewards feature allows token holders to keep generating a fixed passive income proportional to their holdings. What makes it exciting is the static rewards keep growing in perpetuity as the transactions on the Gain Protocol network grows. Effectively, it means that as the community becomes bigger, your crypto wealth thrives. All you need to do is acquire Gain Protocol tokens at their best price for maximum returns. Following the cardinal rule, moonshots are the best investments when you act early.

INVESTOR PROTECTION

One of the most significant advantages of the Gain Protocol is that it follows a zero-compromise policy when it comes to protecting \$Gain Investors. One of the seven Gain Protocols – the Whale Protection protocol – is designed to protect small investors' capital from taking a hit due to irresponsible and sometimes purported manipulation of the market by big investors often referred to as “whales”.

When these big investors go on a dumping spree, they can easily contribute to plummeting the prices of any DeFi token. With the native “Whale Protection Protocol”, \$Gain Investors have nothing to worry about, and in fact, get to benefit from irresponsible indiscriminate selling attempts. Gain Protocol implements a fee that applies only to gainers who act irresponsibly and sell large amounts of coins all at once regularly.

The process from the “whale activity” charges are added to the static reward pools and redistributed to all token holders proportionally. Effectively, it means that \$Gain owners not only benefit from the 3% of each transaction that's shared with \$Gain holders but they also get a share of the “X%” fee collected from the bigger sales.

The Gain Protocol also has clearly defined what qualifies as large scale additionally chargeable transactions. “If the liquidity pool currently has 100 coins, holders can sell up to 2 coins without paying the additional fee. If a holder sells 6 coins within a day, an additional fee of 16% will be charged (6-2)². The additional fee has a maximum cap of 25%.”

As the DeFi markets are growing faster than ever, the number of whales looking to profiteer at the cost of smaller investors is also increasing. As a mid-cap or private investor looking to create a sustainable and scalable passive income, your digital assets must be protected from the activities of bigger investors. The gain protocol has meticulously designed its investor protection solution to charge such irresponsible and concerted selling activities and automatically and adequately compensate even the smallest investor.

GAIN PROTOCOL ADVANTAGE FOR RETAIL INVESTORS

\$Gain are getting increasingly popular amongst retail investors. One of the top DeFi tokens on the market, the Gain Protocol has unique advantages for its retail investors. Let's take a quick look at some of them.

1. Easily Accessible: Investing in Gain Protocol is easy. One can simply visit the Gain Protocol website and purchase \$Gain. The tokens are already listed on PancakeSwap.

2. Fixed Rewards: If you're an investor looking to create a fixed reward passive income from your crypto holdings, \$Gain is your best bet. \$Gain owners get access to the best and most secure earning opportunities to create a passive income for themselves. All \$Gain token holders continue to earn fixed rewards in perpetuity as the transactions on the network are taxed and proceeds redistributed to token holders. The best is the rewards keep on increasing as the transactions on the network grow.

3. Greener Tokens: With the debate around the energy efficiency of top tokens like Bitcoin and Ethereum ensuing, experts are raising their concerns about the environmental impact. \$Gain is created on the ultra-powerful and advanced Binance Smart Chain (BSC), which uses the Proof-of-Stake (PoS) consensus mechanism to validate transactions on the blockchain. It is highly energy efficient with a near-zero carbon footprint. Unlike conventional Proof-of-Work (POW) consensus mechanisms, \$Gain tokens don't involve the energy-intensive mining process. As such, by investing in Gain Protocol, you also get to contribute to creating a more sustainable and secure means of value storage mainstream. Gain Protocol offers a true sustainable passive income solution with the highest levels of transparency and security.

4. Additional Earnings With Sweepstakes: Gain Protocol provides users with additional earning opportunities through Sweepstakes. These are native draws – 7 Sweepstakes protocols are held every day using the 1.5%-3.4% fee. The proceeds from the draws are given to random token owners. Because the Gain Protocol Sweepstakes are automated, there is no chance of any fraud. To retail investors, it means there's always a chance to win big – seven times a week.

5. Reasons You Can't Ignore Gain Protocol

Cryptocurrency DeFi investments are soon going to take over conventional investments like stocks and precious metals for sheer utility and accessibility. Even the IMF and their counsellors now agree that the blockchain-based monetary system has the potential to provide financial services and solutions to the unbanked. Gain Protocol is committed to removing the biggest investor bottleneck in DeFi – and that's security. The project allows investors to earn static rewards and is one of the best DeFi projects offering highly profitable, fixed tokens designed to benefit private investors. If you're reading our Gain Protocol review this far, we understand that you have been looking to get a sustainable passive income solution with your crypto investments. Gain Protocol's fixed rewards tokens are simply something you can't afford to miss.

Here's why:

1) Whale Protection Protocol: Securing retail investors' assets from undue and artificial depreciation due to irresponsible activities of bigger investors who start selling indiscriminately, triggering a panic, which subsequently leads to a price drop, Gain Protocol's Whale Protection solution is designed to deter such attempts to manipulate the prices. Gain Protocol charges a separate fee for bigger transactions. The fees from these transactions are redistributed to token owners.

2) Swap X: As a retail investor, one of the biggest advantages you have with Gain Protocol is the ease of sale and purchase. You can easily acquire and diversify your \$Gain directly from their website's advanced Swap X feature. It allows users to directly purchase, sell and swap \$Gain.

3) Audited Smart Contracts by Solidity Finance: As DeFi gets popular, we see how rug pulls and Ponzi schemes are duping investors globally. The smart contract is the ultimate recourse to ascertain the legitimacy of the claims. Gain Protocol is increasingly drawing investor interest because it already has its Smart Contract audited by a reputable firm, Solidity Finance.

4) Dynamic Liquidity Protocol: One of the most critical components of any DeFi protocol is liquidity. While in conventional markets, we have an intermediary financial institution determining and influencing the price movements, the decentralised crypto exchanges function on Automated Market Makers (AMMs). The prices are determined by the free market forces and the availability of buyers and sellers. The dynamic liquidity protocol is designed to ensure there is no dearth of liquidity and \$Gain users get the best value for their assets. Gain Protocol's smart contract applies a fee on all transactions, of which 2% is automatically transferred to a dynamic liquidity pool to ensure seamless supply. This benefits token owners and helps stabilise the price and availability.

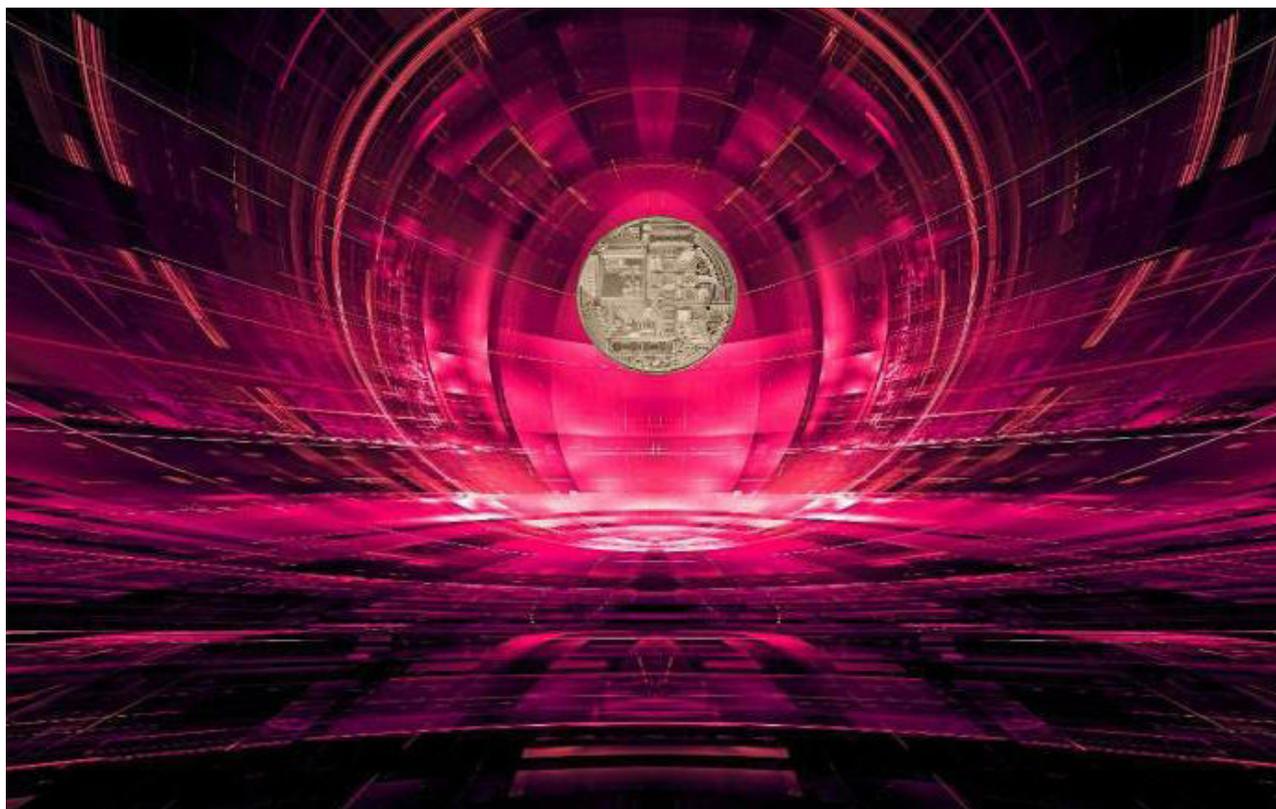

5) Pioneering Philanthropy 3.0: Integrating blockchain with charity, the Gain Protocol also features a dedicated charity pool. With an innovative and more transparent way to help promising charities, with \$Gain, you will also be pioneering Philanthropy 3.0, which is now happening through blockchain networks. One of the key advantages of Gain Protocol's charity pool is that it ensures the highest levels of transparency and allows you to be a part of a thriving charitable initiative while also earning fixed rewards from your crypto investments.

The Gain Protocol platform features many different opportunities for investors. Most importantly, the tokens and the ecosystem around them are designed to be highly secure, investor-friendly and provide consistent income, which grows with your token holding and transactions on the network.

CONCLUSION

DeFi projects, sloganeering "Make-money-from-crypto", are a dime a dozen. However, when the dust settles in the coming months, only the projects that prioritise investor protection, are rug pull-proof and have a solid foundation of advanced technical architecture will survive. Gain Protocol checks all the boxes and prioritises investor interests. Features like Whale Protection show the commitment and the underlying philosophy that inspires the Gain Protocol team. Gain Protocol also has Swap X features, which makes it easy for investors to buy, sell or swap the tokens directly on the Gain Protocol website, without having to visit Pancakeswap Dex. It shows that the platform is investor-oriented. With such advanced features, it's not at all difficult to filter Gain Protocol from the rest of the fixed rewards tokens. As a DeFi enthusiast or serial investor, you would definitely want to explore how to make \$Gain a part of your diversified portfolio.

Bloomberg Announces Launch of New Decentralized Finance Index for Institutions

Bloomberg, a global business and financial news giant, is expanding its coverage of the crypto markets with a new decentralized finance (DeFi) index.

In a new press release, Bloomberg says the company is teaming up with digital asset manager Galaxy Digital to launch Bloomberg Galaxy DeFi Index, which will use the ticker symbol “DEFI.” The statement adds that the DeFi benchmark is *“owned and administered by Bloomberg Index Services Limited and is co-branded with Galaxy.”*

Alan Campbell, head of product management for Bloomberg’s multi-asset index business, says that DeFi is growing as the next big trend in crypto investments.

“As liquidity and institutional custody solutions continue to grow, DeFi has become an increasingly compelling option for institutional investors, and we’ll continue working with Galaxy to expand our crypto index offering.”

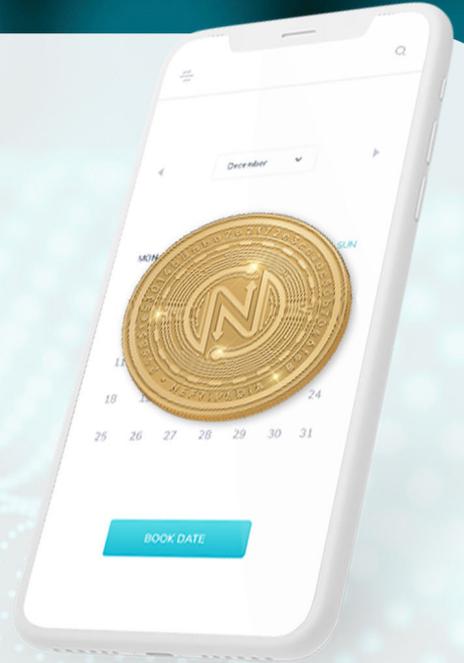

According to the statement, the index will track the performance of the largest DeFi protocols by market value that offer financial services without any central intermediary, such as banks, exchanges or brokerages.

US Mayor Says Bitcoin Will Keep Rising as the Fed Continues Printing More Dollars

The mayor of the U.S. city of Jackson, Tennessee, explains that the price of bitcoin will keep rising as the Fed continues to print money. He believes that bitcoin is “definitely the future monetary system.”

Mayor Explains Bitcoin’s Price Will Keep Rising as the Fed Continues to Print Money

Mayor Scott Conger of the U.S. city of Jackson, Tennessee, commented on the price of bitcoin Saturday in relation to the Fed’s money-printing policy. He wrote:

As the Feds continue to print more USD, this chart will continue to rise. Bitcoin could be the present, but is definitely the future monetary system, and after 21M, there isn’t any more.

The BTC price when the mayor tweeted was \$49,626.81. At the time of writing, the price of the cryptocurrency is sitting at \$49,775.13 after it surpassed the \$50K level Monday morning.

Bitcoin.com News reported in April that Mayor Conger was exploring payroll conversions for city employees as well as bitcoin mining to add BTC to the city’s balance sheet.

In July, he tweeted that his city’s blockchain task force is looking into how the city can “accept property tax payments in bitcoin and allow our employees to DCA in bitcoin.”

UNLOCK YOUR OPPORTUNITY TO EARN PASSIVE REWARDS WITH ALOHA'S REVOLUTIONARY DEFI ECOSYSTEM

Globally, more than 3.5 billion people use smartphones, and each of them is required to pay their monthly bills. Yet, nearly 76% of people find it either difficult to get online daily or fail to come online until the payment is made. Another fact worth noting is that nearly 67% of people don't use the entire bandwidth (or data) allocated to them, either on their smartphone contracts or business/home ISP contracts.

This is where Aloha comes into the picture. Aloha monetises all the unused data, enabling smartphones to share that data through the Aloha application by sharing data and WiFi in return for payments in loyalty tokens. Aloha is free of cost, highly secure, and open for everyone who wishes to use it. In this article, learn more about Aloha, one of the top Defi projects in the market, which also offers an excellent way to earn passive income. This Aloha Defi review will also help you understand how staking NFTs can be profitable at Aloha and help users earn Defi rewards.

WHAT IS ALOHA DEFI?

Aloha is one of the best Defi projects. Its decentralised finance ecosystem acts as your gateway to the world of Defi. Aloha offers NFTs, staking as well as DAO platform, which makes use of NFTs. Users can also earn exciting rewards if they choose to participate in the DAO. All of this happens at

an instant speed as well as for a minimal transaction fee. Crypto enthusiasts can do all of the above and more by using Aloha’s mainnet product. With the Aloha app, you can also earn digital tokens by simply sharing the bandwidth on your phone.

Both Aloha and Hotspot users can make money by choosing the Aloha platform. All they need to do is share the unused data on their smartphones and earn money in the process. The Aloha tokens earned can then be used for online shopping and even for staking Aloha NFTs.

ALOHA ECOSYSTEM: ALL IN ONE ONE-STOP DEFI SHOP

Aloha happens to be a decentralised P2P blockchain app for WiFi sharing. Aloha allows users to share their unused data or WiFi and receive tokens in exchange.

The Aloha application allows users to earn as well as buy Aloha tokens. It is designed to be simple and enables the Aloha community to make all the crucial decisions. Once on the Aloha platform, users can purchase Aloha NFTs through a simple gateway.

Aloha NFT Staking

- 1** Stake as many as 10,000 Aloha coins for 10 days and get a Rare NFT.
Rare x1 Vote
- 2** Stake 90,000 Aloha Tokens for 14 days to get your Ultra-Rare NFT.
Ultra Rare x5 Votes
- 3** Stake 200,000 Aloha coins for 21 days and get Exclusive VIP NFT.
VIP Exclusive x50 Votes

EXCLUSIVE VIP NFTs ULTRA RARE NFTs RARE NFTs

FOLLOWING ARE THE ALOHA ECOSYSTEM BENEFITS:

Hotspot hosts: If we talk about Aloha Ecosystem Benefits, then you must know that Aloha allows its users to easily share their unused mobile data through the app. Sharing unused mobile data helps users earn rewards that can be redeemed for Aloha tokens and marketable tokens.

Online Shopping: Users can also use their rewards for buying special deals offered by local businesses through the Aloha shopping mall. Aloha's online mall features trade functionality and quick exchanges for users. With the help of the Quick Exchange, users can convert Aloha digital tokens into ETH, BTC, as well as other currencies. Users can trade the tokens with the help of API access to any partner exchange platform. Hence, if a local company sends an offer voucher, then the recipients or the Hotspot Hosts shall receive a push notification informing them about the special offer in their dashboards.

The Hotspot Hosts can visit the View Local Offer section and view the multiple vouchers available before them. Users can download these vouchers and redeem them to get Aloha tokens. The Hotspot Hosts can go shopping at the Aloha online mall, where they will find multiple products, preferred retailers, and categories. Alternatively, hosts can also suggest products or/and retailers to Aloha. The hosts can then make payment with the help of their Aloha credit card or using another card. The Hotspot Hosts looking to purchase more tokens can buy Aloha tokens at the Buy More Aloha section.

ALOHA DECENTRALISED FINANCE

Aloha decentralised finance enables users to engage in the staking of Aloha tokens and earn NFTs. Thus, holders of the NFT enjoy exclusive advantages like perks and governance rights. With Aloha NFTs, users get the right to vote on important issues, like how Treasury funds should be used. The higher-level NFT holders get additional voting power.

On every transaction, Aloha applies a 3% transfer fee. This fee gets automatically divided between the Development Fund (20%), Treasury (70%), as well as NFT holders (10%). This creates a self-sustainable Aloha ecosystem that generates rewards for stakeholders on every single transaction. Apart from this, the Aloha community gets governance rights over the Treasury funds. As a result, holders are allowed to participate in regular buybacks with profit or burns sharing.

INCOME OPPORTUNITIES WITH ALOHA

If you are searching for some passive income to pay your bills, then you can easily use the Aloha app to fulfil your objective. With the Aloha applications, you can share all the free traffic and unused data and receive rewards in return. The app needs to function only for an hour every day, and you will receive your Aloha loyalty payments with minimal effort.

BELOW, FIND OUT HOW ALOHA PROVIDES USERS AND BUSINESSES WITH THE OPPORTUNITY TO EARN PASSIVE INCOME.

FOR USERS

As far as users are concerned, they share their bandwidth using the Aloha app with others in the Aloha community. As a result, the users (also referred to as the Hotspot Hosts) get to make some Loyalty Tokens.

FOR BUSINESSES

Boost Traffic: Businesses too can boost traffic to the desired venue with the help of Aloha, which is one of the top Defi projects. They can do this by increasing traffic by almost 50% and over three months. Apart from witnessing their business grow, owners also earn Defi rewards in the form of Loyalty Tokens.

Earning for Recommendations: Users can also recommend other suppliers, local businesses, etc. to become a business user, as well as earn Loyalty Tokens for doing the same.

ALOHA'S ADVANCED YIELD FARMING GAINS

A popular trend in the crypto world is the concept of lending money and earning interest in exchange. Thus, instead of simply waiting for the value of ETH, BTC, and other coins to rise, crypto enthusiasts are now earning returns by simply lending their cryptocurrencies or employing other strategies for earning yield. This yield farming can help them double their interest rates, much higher than what they can make with dollars. With Aloha, which is one of the best Defi projects for crypto lovers, users can earn by staking NFTs as well as through advanced yield farming gains.

STAKING WITH ALOHA

Several crypto organisations today offer NFTs. However, the Aloha NFT is unique. Each Aloha NFT has its votes, based on how rare the NFT is. One can easily purchase the Aloha NFT on the Open Sea market or even stake their Aloha tokens and earn them. Once the users have their first NFTs, they can stake them through a fast process. Aloha has integrated with Polygon, and thus the process of staking NFTs is both inexpensive and quick through the Aloha platform.

HERE'S WHY ALOHA NFTS ARE THE BEST:

Limited amounts every month: Users can sell or swap Aloha NFTs on different platforms in the future.

Voting power: NFT holders get exclusive voting rights with NFTs.

ALOHA NFTS

Aloha's decentralised platform allows users to engage in NFT staking. Thus, users can stake their Aloha Tokens as well as earn a unique NFT in return. These NFTs have distinct features based on the amount of Aloha that users stake. It also has features like governance, exclusivity, pools, partnerships, and more.

FOR EVERY ALOHA, THERE IS GOING TO BE A FEE OF 3%, WHICH WILL BE DISTRIBUTED IN THE FOLLOWING MANNER:

Treasury: 70% of the 3% fee.

Marketing, Operations & Development: 20% of the 3% fee.

NFT Holders: 10% of the 3% fee.

The above will not only help in creating a strong ecosystem but also assist in incentivising the NFT holders. How the Treasury funds will be used shall be decided after a community discussion through proposals within the governance platform.

Thus, Aloha's NFTs will be utilised in governance as well as provide a unique opportunity to both the community and the investors. Users of Aloha will get the opportunity to design proposals through the governance mechanism, as well as determine the future of Aloha. A user will typically have one vote for Rare NFT, five votes for Ultra-rare, and fifty votes for exclusive VIP NFT.

ALOHA NFT STAKING

Staking NFTs is quite simple when using the Aloha app. To acquire the Aloha NFT, a user will need to stake Aloha through their platform for a specific period and claim NFT after the staking period is complete. The NFT rarity shall depend on how much Aloha is staked. Thus, there will essentially be three distinct pools, including:

1.RARE: Stake as many as 10,000 Aloha coins for ten days and get a Rare NFT.

2.ULTRA-RARE: Stake 90,000 Aloha Tokens for fourteen days to get your Ultra-Rare NFT.

3.EXCLUSIVE VIP: Stake 200,000 Aloha coins for twenty-one days and get Exclusive VIP NFT.

Once the agreed period comes to an end, you can claim your NFT to the wallet. If a user un-stakes before that period, he/she won't be eligible for the NFT. But they will still get 100% of their Aloha returned to their wallet. Also, after the NFT has been duly claimed, users can un-stake their Aloha as well as re-stake to receive another NFT.

ALOHA DEFI ADVANTAGES

As far as the Aloha Defi project is concerned, it is the top Defi project available to crypto users globally. It offers a decentralised financial ecosystem, which is transparent as well as doesn't need plenty of resources. It uses blockchain technology that makes it accessible to more people with ease. The Aloha platform allows users to control all things, such as the changes that take place inside the network. Users can also decide on the changes that are to be implemented within the network. Apart from this, they can also submit proposals as well as vote on them.

The Aloha platform allows users to control all things, such as the changes that take place inside the network. Users can also decide on the changes that are to be implemented within the network. Apart from this, they can also submit proposals as well as vote on them.

FOLLOWING ARE A FEW ALOHA DEFI ADVANTAGES:

Any individual can participate in the Aloha Defi ecosystem. All they need to do is connect to the network through sharing their unused mobile data and make the most of it. To join and make the most of Aloha Defi advantages, one needs to just download the app as well as register through it.

The Aloha app is also highly secure and features best-in-class security elements that create an independent and unique wireless network.

With Aloha, users can also earn staking rewards. Since NFTs have become quite popular, users who purchase Aloha Tokens can consider staking NFTs and earn NFTs, which can be utilised for governing the DAO.

THE VERDICT

If you have read this Aloha Defi review closely, you will understand that the Aloha Defi ecosystem is undoubtedly the best Defi project that offers users the opportunity to earn passive income using Aloha's unique Defi ecosystem.

Whether you are new to cryptocurrency, or even if you are considering staking NFTs, and buying the best of the brands, products and services, with the Aloha Defi ecosystem, you can never go wrong. Our Aloha Defi review also explains how Aloha is the only app that supports WiFi sharing, allowing users to take advantage of their unused data, which would have otherwise gone to waste.

So, if you are searching for the next best crypto project, then the Aloha Defi project is a good option. For more details, visit [https://alohadefi.io/!](https://alohadefi.io/)

Grayscale Tops Up Ethereum Investment To \$10 Billion

Ethereum makes up a large part of crypto-asset manager Grayscale's portfolio. In a recent report, it shows that Grayscale now has over 3 million ETH in its asset under management (AUM), amounting to more than \$10 billion. This makes the asset manager one of the largest holders of Ethereum in the space.

The asset manager had gradually increased its ETH holdings over time, adding almost 20,000 ETH to its portfolio back in February. The recent filings show that the New York-based asset manager has increased its crypto holdings since its last report, which has raised the value of the total assets under management from \$33 billion to \$41.4 billion.

Ethereum Is Not The Only Interest

The fund had started out providing a way for investors to invest in Bitcoin through the stock market. But over the years, Grayscale has added more crypto-assets to its offering to provide investors more exposure to the markets. Grayscale's crypto management spans across a host of cryptocurrencies. Assets in its care range from Bitcoin to Ethereum, Litecoin, Ethereum Classic, and a host of others.

In addition to its \$10 billion ETH and \$29 billion BTC holdings, Grayscale also holds over \$700 million worth of Ethereum Classic and over \$300 million worth of Litecoin in its portfolio. The size of its assets under management puts Grayscale as the largest crypto asset manager in the world.

Binance Hires Former Abu Dhabi Global Market Head as Singapore CEO

The move provides an opportunity to get ahead of the regulatory curve – a sore point for the exchange in recent weeks.

Binance has hired Richard Teng, the former CEO of Abu Dhabi's financial watchdog, to head the exchange's operations in Singapore, the company said in a press release on Monday.

Teng had reportedly been in talks with the exchange's Singapore subsidiary business to join as early as last week, CoinDesk reported.

The move can be viewed as an opportunity to get ahead of the regulatory curve which has been a cause of consternation for the exchange in recent weeks.

Binance Singapore offers Singapore citizens and residents trading pairs for bitcoin (BTC, -3.35%), ether (ETH, -5.21%) and Binance coin. The platform provides SGD deposit and withdrawal functionality via Xfers Direct, according to a press release on Monday.

Teng spent six years at the Financial Services Regulatory Authority at Abu Dhabi Global Market as its head.

Crypto 'not protected by law,' rules provincial high court in China

A provincial high court ruling in China has set a potential precedent by declining to protect a plaintiff's \$10,000 worth of lost crypto tokens.

Yet another blow has been dealt to China's cryptocurrency community, with news of a new high court ruling in the Shandong province that has drawn out the consequences of crypto's lack of legal status in the country.

As the South China Morning Post (SCMP) reported, the case in question was an appeal against a ruling this January by an intermediate court in the city of Jinan. The plaintiff in the case had lost 70,000 yuan (roughly \$10,750) by investing in unnamed crypto tokens back in 2017, which friends of his had reportedly endorsed. Following the People's Bank of China's doubling down on its anti-crypto measures in 2018, the involved accounts were closed, leading to the loss of the tokens.

Shandong's high court has now ruled this weekend against the plaintiff's case, which rested upon allegations of fraud, by affirming that "investing or trading cryptocurrency isn't protected by law."

As previously reported, Shandong's ruling is in line with the judgment of some other provincial courts in China, as, for example, when a court in the Fujian province dismissed a Bitcoin-related case last year on the grounds that a digital commodity cannot be protected by Chinese law.
