Weekly Cryptocurrency Market Analysis

Hello crypto traders welcome to this week's edition of Cryptonaire Weekly. The overall cryptocurrency Market Cap stands at \$276 Billion. We have seen a \$12 Billion decrease in the Market Cap since the last week. Bitcoin price currently around \$10,123 and ether price is currently at \$214. The current market cap for bitcoin is \$181 Billion and for altcoins the current market cap is \$95 Billion.

Percentage of Total Market Capitalization (Dominance)

Bitcoin	65.21%
Ethereum	8.26%
Bitcoin Cash	1.98%
Litecoin	2.09%
Ripple	4.89%
Dash	0.36%
NEM	0.21%
Monero	0.51%
IOTA	0.30%
NEO	0.30%
Other	15.90%

For the past few days, Facebook's Libra project has hogged the limelight. The regulators and politicians around the world are voicing their concern on the project, with only a few in support. This has turned the sentiment decisively negative. As a result, the traders have changed their strategy from buy on dips to sell on rallies.

However, we expect the focus of the crypto community to soon shift from Libra to the institutional investors. The long-awaited Bitcoin futures platform Bakkt has finally begun testing from July 22. The launch of Bakkt is likely to attract institutional investors to Bitcoin futures trading. Another event that can bring some cheer to the crypto community is the lunch between crypto industry leaders and the legendary investor Warren Buffet. Many hope that the meeting can change Buffet's negative view on cryptocurrencies.

While the correction in a few altcoins has been harsh, we like the way Bitcoin has held during this period. This shows that strong hands have accumulated it during the recent rise from the lows. We expect buying to resume as soon as the positive news flow starts.

Crypto Trade Opportunities

BITCOIN - BTC/USD

COINBASE:BTCUSD, 1D 10759.90 ▼-94.57 (-0.87%) O:10856.41 H:11040.00 L:10631.23 C:10759.90

The recovery in Bitcoin hit a wall at 20-day EMA, which shows lack of demand at higher levels. The 20-day EMA has started to turn down and the RSI has dipped below 50. This shows that bears have the upper hand. They will now attempt to sink the price below the uptrend line. If successful, a drop to \$9,071 is likely.

Repeated breakdown of a support line weakens it; therefore, the bulls are unlikely to buy this dip aggressively. If \$9,071 breaks down, the price can drop to \$7,427. As the probability of a fall is high, traders should avoid buying at the current levels.

Our bearish view will be invalidated if the price rebounds off the uptrend line or \$9,071. If that happens, the bulls will again try to propel the price above 20-day EMA. We anticipate buyers to return if the price sustains above \$11,150. Above this level, a rally to \$13,202.63, followed by a retest of the highs is likely. Traders should wait for buyers to assert their supremacy before entering fresh positions.

ETHEREUM - ETH/USD

COINBASE:ETHUSD, 1D 227.90 ▼ -0.38 (-0.17%) O:228.20 H:234.58 L:225.44 C:227.90

Created with TradingView

The trend in Ether has turned down. It has made a series of lower highs and a lower low. This shows that every rally is being sold into. The downtrending moving averages and RSI in the negative zone confirm that bears are in command. The pullback from the recent lows of \$190.11 was shallow and could not extend beyond \$236.58. This shows a lack of buying at higher levels. The price has turned down and is likely to retest \$190.11. A drop below this critical support will attract further selling that can drag the price to \$146.

Buying in a downtrend can result in quick losses. Therefore, we suggest traders avoid buying until the trend changes from down to up. The first sign of a change in trend will be if the bulls push the price back above \$270 and break the lower high and lower low formation.

RIPPLE - XRP/USD

BITFINEX:XRPUSD, 1D 0.31166 ▼ -0.00050 (-0.16%) O:0.31218 H:0.31878 L:0.31004 C:0.31166

Created with TradingView

XRP is trading inside a large range of \$0.28524 to \$0.46669. The price has repeatedly bounced off the support since mid-December last year. This shows that buyers are active when the price dips to the support. However, the digital currency has a history of trading near the support for an extended duration, as seen during end-January to mid-May of this year. Therefore, we are not in a hurry to recommend a trade in it.

The bulls had purchased the recent dip to \$0.28524 on July 16 but they were unable to carry the price above the 20-day EMA. The price has turned down and might retest the support at \$0.28524 once again.

If the bears break below the critical support of \$0.28524, it will start a new downtrend. The first support on the downside is the yearly low of \$0.24653 but we do not expect it to hold. We anticipate the fall to extend to \$0.18.

However, if the next dip to \$0.28524 is purchased, the digital currency will remain range-bound. We might suggest long positions if the next rebound off the lows is strong and scales above the 20-day EMA. Until then, we remain neutral on it.

LITECOIN - LTC/USD

The trend in Litecoin has turned down. Every relief rally is facing stiff resistance at the 20-day EMA. Both moving averages are sloping down and the RSI is in the negative zone, which suggests that bears have the upper hand. They will now try to sink the price back to \$83-\$76.63 support zone.

If this support zone breaks down, the downtrend will extend to \$64.86. As the trend has turned bearish, buying is not advisable at the current levels.

Our bearish view will be invalidated if the digital currency rebounds off the support zone and climbs above the 20-day EMA. A breakout of the downtrend line will indicate a change in trend. We will wait for the price to sustain above the downtrend line before recommending any fresh positions in it.

BITCOIN CASH - BCH/USD

COINBASE:BCHUSD, 1D 310.43 ▼ -3.01 (-0.96%) O:313.10 H:318.30 L:301.06 C:310.43

Created with TradingView

Bitcoin Cash is in a downtrend. It is currently trading inside a descending channel. The rebound from the support line of the channel on July 15 turned around from the 20-day EMA.

Both moving averages are turning down and the RSI is in the negative zone, which suggests that bears are in command.

If the price slides below the recent low of \$255.06, it can correct to \$227.40. This is an important support. If the price breaks below \$227.40 and the support line of the channel, the fall can extend to \$166.98.

Our bearish view will be negated if the bulls propel the price above the channel. We will wait for the cryptocurrency to signal a turnaround before suggesting a trade in it.

Advancements in the Cryptocurrency World

Bank of America Patents Method Using Ripple Technology

A non-utility patent filed by Bank of America has Ripple fans in high spirits today. The patent, which is dubbed “Real-time net settlement by distributed ledger system,” directly references Ripple’s digital ledger technology in multiple illustrations.

Ripple Without the XRP

At no point throughout the abstract or supporting documents does Bank of America explain or much cite Ripple or XRP. The XRP token, which is the basis for Ripple’s family of blockchain products, is mentioned nowhere.

The patent cites “nostro accounts” – a term used to describe how banks secure money for each other – and points out that they are expensive. With the inspiration of blockchain technology, Bank of America wants to try something new, writing:

“[A] need for a flexible and cost effective accounting treatment and system for implementing the same are needed.”

Circle Moves Exchange Operations Offshore With New Bermuda Office

Due to mounting regulatory pressures in the United States, the crypto company Circle is moving the majority of its exchange operations offshore.

Circle announced Monday it received a full Digital Assets Business Act license in Bermuda for its crypto exchange Poloniex. Circle CEO Jeremy Allaire told CoinDesk that 70 percent of Poloniex users hail from beyond the U.S. and the new Bermuda-based entity will handle those accounts from now on. In May, the company geofenced some assets on Poloniex from U.S. customers.

“Europe and Asia are both pretty significant markets for us in particular,” he said, adding the USDC stablecoin is particularly popular with institutional Asian investors. “The lack of regulatory frameworks significantly limits what can be offered to individuals and businesses in the U.S.”

Circle laid off around 30 employees earlier this year to “ensure our costs were in line with the market,” Allaire said. The cuts were attributed in part regulatory uncertainty in the U.S. Circle now says it plans to hire around the same number of people over the next 24 months, perhaps with different roles, to focus on global markets.

Crypto Bullishness Spreads on Capitol Hill

Crypto Bullishness Spreads on Capitol Hill

U.S. Congress has shown that it is starting to care about cryptocurrency as a number of lawmakers spoke up in favor of it this week. "The world Satoshi Nakamoto had envisioned is an unstoppable force" and "there's no capacity to kill bitcoin" are some of the comments made by lawmakers. Meanwhile, the Fed chair said bitcoin is a store of value like gold and admitted that an era of many different currencies could return with the wider adoption of cryptocurrency.

Unstoppable Force, No Capacity to Kill Bitcoin

During congressional hearings on Facebook's Libra this week, a number of U.S. lawmakers spoke in favor of cryptocurrency. Among them was Rep. Patrick McHenry, the Republican Leader of the House Financial Services Committee.

At the Committee on Financial Services hearing on July 17, McHenry said: "The reality is, whether Facebook is involved or not, change is here ... Digital currencies exist, blockchain technology is real, and Facebook's entry in this new world is just confirmation albeit its scale." He elaborated:

"The world that Satoshi Nakamoto, author of the Bitcoin whitepaper, envisioned and others are building is an unstoppable force."

Bakkt Begins Testing Bitcoin Futures Platform Following Hype and Delays

Bakkt, the long-awaited Bitcoin (BTC) futures platform from the Intercontinental Exchange (ICE), has begun testing the delivery of BTC futures, according to an official tweet on July 22.

Per the tweet, user acceptance testing for Bitcoin daily and monthly futures began today with participants from around the world.

The platform initially announced the launch of futures testing in June, when Bakkt COO Adam White stated, "On July 22, two days after Apollo 11's 50th anniversary, Bakkt will initiate user acceptance testing for its Bitcoin futures listed and traded at ICE Futures U.S. and cleared at ICE Clear US."

White then said that the introduction of Bitcoin futures will help usher in more institutional participation in cryptocurrency markets.

Bakkt's Bitcoin futures are physically delivered via a process called "warehousing," which will purportedly bode well from a price discovery standpoint, but cause some concern among regulators.

Bakkt has experienced several delays regarding its launch as regulators like the United States Commodity Futures Trading Commission investigated the platform's compliance procedures and its possible effect on markets.

Blockchain analytics firm Chainalysis joins Duolingo, Patreon on Forbes' next billion-dollar startups list

Crypto compliance and investigation provider Chainalysis has become the only blockchain company to make Forbes' next billion-dollar startups list of 2019, joining the ranks of tech giants—Patreon and Duolingo. Its efforts to tackle crime in the crypto industry and build tools to enable easy regulatory compliance have made it one of the most promising companies in the industry.

Forbes believes Chainalysis will be the next billion-dollar startup

With crime and uncertainty plaguing every corner of the crypto world, it's no wonder why one of the industry's most valuable companies is a startup working on combating these issues. Chainalysis, a blockchain analysis company founded in 2014, recently became the first crypto company to make Forbes' "next billion-dollar startup" list of 2019.

Chainalysis has joined the ranks of 24 other tech giants, who Forbes believes have the potential to achieve a billion-dollar valuation (unicorns). The company has joined the ranks of Patreon, one of the most popular crowdfunding platforms in the world, and Duolingo, the globally popular language learning app, alongside a slew of other tech innovators that include Cyberason, Syntego, Truepill, and Front.

The legendary publication seems to believe that the astronomic growth the company has seen in the past two years will help Chainalysis join the handful of unicorns in the crypto business.

Precious Metals Rally but Are Gold Bugs Secretly Holding Bitcoin?

Gold stocks are on a tear. So much so that one analyst believes that they are about to become the next FAANG stocks, the latter of which represent high-flying tech companies that have been fueling much of the stock market's gains lately.

On CNBC, Wolfe Research Technical Analyst John Roque touts what he calls the BAANG stocks, which are a group of five gold companies that together have advanced more than 40 percent since May. These companies include Barrick Gold, AngloGold Ashanti, Agnico Eagle Mines, Franco Nevada, and Gold Fields. And while investors may be flocking to these gold names lately, don't be surprised if they are also "hodling" some digital gold – bitcoin – whether they admit it or not.

CCN previously reported that Bridgewater Associates Co-CIO Ray Dalio provided a bullish outlook for gold, describing a "paradigm shift" in which the No. 1 precious metal would be used to diversify investment portfolios in an environment of persistently low interest rates. In fact, this scenario has played out lately, with the price of gold up by a double-digit percentage year-to-date and hovering at \$1,427 while bond yields remain low.

In his argument for gold, Dalio recently wrote that while many expect "the best risky investments will continue to be equity and equity-like investments," he disagrees.

"I think these are unlikely to be good real returning investments and that those that will most likely do best will be those that do well when the value of money is being depreciated and domestic and international conflicts are significant."

Mercedes Parent Company, Daimler, is Allegedly Making Its Own Crypto Hardware Wallet for Its Cars

The parent and multinational corporation behind the internationally renowned Mercedes Benz manufacturer, has officially partnered up with the European blockchain interface solutions provider – Riddle & Code – in order to provide a seamless, open car hardware wallet for its fleet of cars.

The startup company officially announced this in a press release which was released to the public at the beginning of this week.

A Marketplace in Your Car – ‘Turn your Automobile Into a Future Marketplace’

According to the press release, having an already installed in-car wallet would, and already has a wide array of use cases that it can be put to use for. These include already existing solutions like car-sharing, autonomous vehicles, real-time exchanges of secure data on traffic between cars as well as other equipment within a smart city environment in order to alleviate the amount of congestion and significantly reduced insurance premiums.

According to the CEO behind Riddle & Code, Tom Füstner, making use of a blockchain solution for smart cities and vehicles are matches meant to happen.

“Autonomous cars must behave consistently to be trusted. Cars are already computing devices. A secure identity ensures that the right authorities have approved code executed inside vehicles and the trustworthiness of data exchanged. RIDDLE&CODE secures this with its cryptographic hardware and uses ledgers to turn automobiles into future market places.”

Global Accounting Firm KPMG Partners with Microsoft, R3 on Telecoms Blockchain

KPMG, a multinational accounting firm, is partnering with software firms TOMIA, Microsoft, and R3 to develop a blockchain for telecom settlements.

One of the “big four” accounting firms, KPMG has pursued industry-specific blockchain pilots in the past, always with an eye to settling cross-border, or network, complexities.

The latest partnership, with two distributed ledger (DLT) industry leaders, Microsoft and R3, continues in the vein of resolving the issues that arise from multi-party connections. Specifically, KPMG is looking to address the hard data issues that will arise from 5G connectivity.

The company states that “international mobile data roaming revenues are expected to reach \$31 billion in 2022, with an average annual growth rate of eight percent.”

It's that accelerating use of international data that Arun Ghosh, Blockchain Leader at KPMG, addressed in a blog post:

“While we will be able to consume more data more quickly and across more locations than ever before in this next wave of telecom advancement, it is becoming increasingly complex for telecom companies to track and settle interchange fees.”

The blockchain being piloted aims to reduce the future costs, number of disputes, and time involved in telecom settlements caused by “billions of mobile interactions flow[ing] through hundreds of connected networks managed by dozens of customers and suppliers.”

Uganda to Deploy MediConnect's Blockchain Platform for Tracing Fake Drugs

The Ugandan government has partnered with blockchain startup MediConnect to trace counterfeit drugs in the country, according to a press release shared with Cointelegraph on July 22.

The President of Uganda, Yoweri Museveni, Minister of Health Jane Ruth Aceng, and other government officials granted support for MediConnect's blockchain-based platform designed to deal with various issues in the pharmaceutical sector. Specifically, the government stated that it would deploy the platform for tracking counterfeit drugs.

The platform enables the recording of prescription medication, thus identifying counterfeit drugs and preventing their distribution in the pharmaceutical supply chain. Per the Ugandan National Drug Authority, 10% of medications prescribed in the country have counterfeit copies publicly available on the market. Dexter Blackstock, CEO of MediConnect, said:

"The Ugandan President, Minister of Health and National Drug Authority all understand the need to act fast to tackle the country's counterfeit drug problem and recognise the benefits offered by tracing medication on the secure, scalable blockchain framework we are developing. We see this as an important opportunity for MediConnect to form part of Uganda's national infrastructure and protect its citizens by ensuring all drugs in circulation are authentic and safe."

The parties entered into a partnership following the 2019 Africa Blockchain Conference in Kampala led by Museveni. Museveni reportedly supported the use of blockchain technology in Uganda during his inaugural speech.

Bitcoin Mining Hotspot Iran Drafts Electricity Tariffs for Crypto Miners

The government of Iran has opted to introduce specific electricity prices for cryptocurrency mining. The west Asian country, which has had a complicated relationship with cryptocurrency in the past, plans to set prices around the same tariffs that are used for exporting electricity.

The government's energy ministry deputy for power and electricity, Homayoon Ha'eri, announced the decision Sunday in remarks reported by Financial Tribune. The economic commission is now awaiting final approval from the wider cabinet. Although Ha'eri did not reveal the prices or rates, he did note that energy export prices can shift based on factors like fuel prices in the Persian Gulf region.

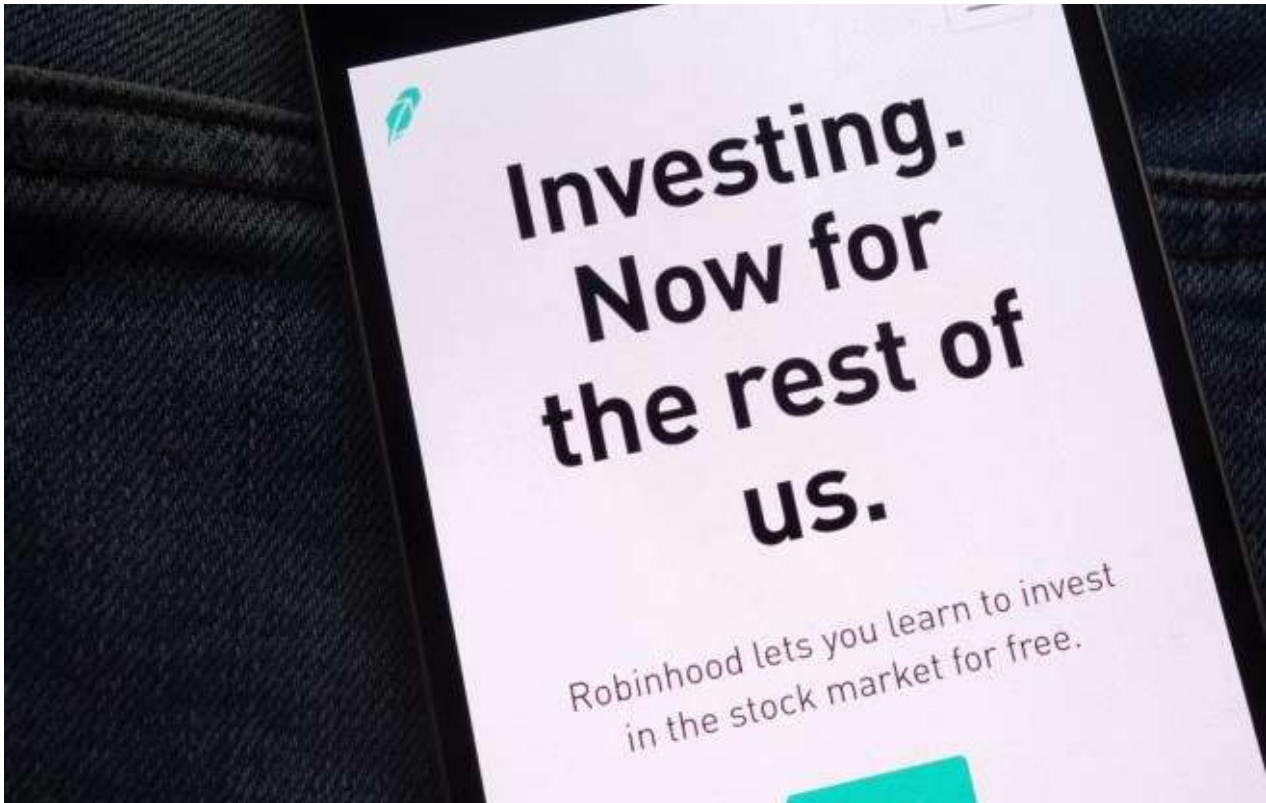

The move is a step toward greater legitimacy for cryptocurrency operations in Iran. The country has attracted miners with cheap electricity prices, but officials have warned about the strain on the national grid. With its own electricity tariff, cryptocurrency mining has been recognized by authorities.

Iran Could Be the Next Stop for Crypto Miners

Iran has become a popular destination for cryptocurrency miners in recent months. Attracted to cheap electricity, miners have been moving operations from China to Iran. It comes as the Chinese government places restrictions on cryptocurrency mining.

Robinhood Raises \$323 Million From DST, Sequoia, and Ribbit Capital

Robinhood, a trading platform for stocks and digital assets, announced a \$323 million Series E according to a Reuters' report.

DST Global, a prominent investor in internet startups led the financing round along with crypto-notables Ribbit Capital and Sequoia.

According to Reuters, the company will direct the capital towards expanding the business and offering new financial services.

"We'll use the funding to keep pursuing our mission of democratizing finance for all," a Robinhood representative wrote in a statement.

Since offering crypto assets beginning in January 2018, the Silicon Valley-based startup has rolled out a number of coins and crypto-related trading features. In May, Robinhood launched cryptocurrency trading for seven assets including bitcoin and ethereum in New York.

Notably, the firm added ethereum classic trading one day ahead of Coinbase in August 2018. It offers crypto trading in bitcoin, ethereum, bitcoin cash, ethereum classic, litecoin, and dogecoin to 20 states.

The platform has gained popularity through offering commission-free trades. It is also looking to add cash management services.

Platinum Project Information

Banksia BioPharm

BANKSIA BIOPHARM

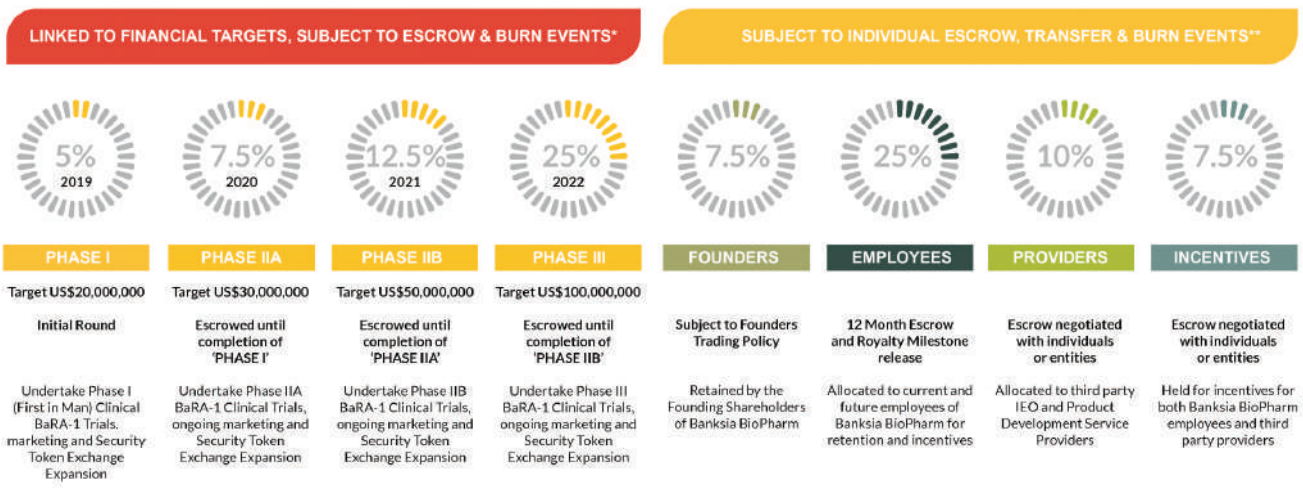

Project Details:

Banksia BioPharm is the first of a new generation of Biotech Companies embracing the new world of Blockchain. A fantastic lead product combined with a new type of funding model makes Banksia truly unique. Banksia's BaRA Therapeutic for Rheumatoid Arthritis (RA) aims to address this debilitating condition in a new and more effective way. No doubt you or someone you know suffers from RA or other chronic inflammation disorder, and the pain and limitations it places in their lives. Why reinvent the wheel? Mother Nature has spent millions, if not billions of years perfecting anti-inflammation agents in a range of organisms. These anti-inflammation agents or 'immuno-modulators' can be harnessed, modified and even improved to treat disease. Banksia aims to "Change the way we treat inflammation" and in doing so, we may very well change the way we do Biotech in a very positive way...

Official Video: <https://youtu.be/DeKMvNwPve8>

DISTRIBUTION OF TOKENS:

USE OF FUNDS:

INTELLECTUAL PROPERTY

MANUFACTURING

CLINICAL TRIALS

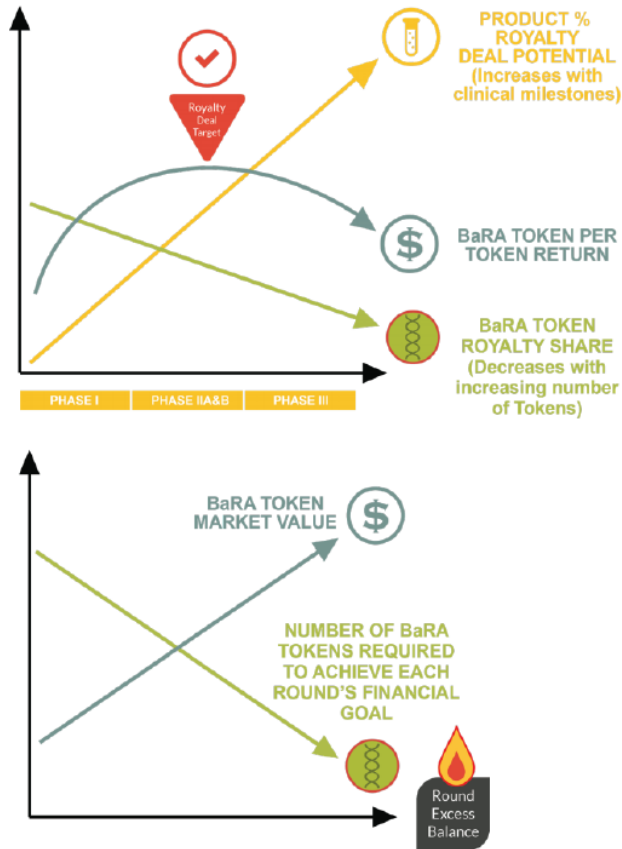

BaRA TOKEN EXCHANGE LISTINGS & MARKETING

BANKSIA BIOPHARM BUSINESS OVERHEADS & CONTINGENCY

Clinical Milestone - Escrow & Burn Strategy:

The Concept

Two competing forces will drive the value of the BaRA Tokens.

Clinical Progression

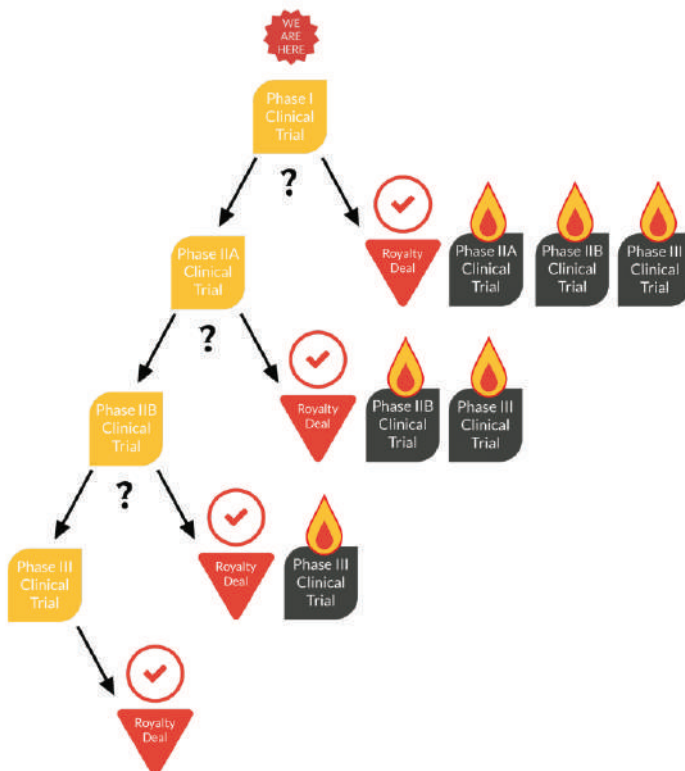

The further the product is driven through Clinical Milestones, the higher the % Royalty Deal that can be negotiated with a Large Pharma partner

Token Numbers

The further the product is driven through Clinical Milestones, the more expensive each phase becomes to execute. Ongoing BaRA Token 'rounds' must be un-escrowed and sold to the market to fund this. Their overall numbers on the market increase but their individual share of the Royalty Pool decreases (dilution).

Sweet Spot

The goal will be to lock down the highest possible Royalty Deal, utilizing the least amount of BaRA Tokens as possible. This in reality will not be as straightforward as the graphic to the left suggests. Careful management and attentiveness of the Banksia Team will be required to balance the competing factors and hit that 'sweet spot' for the benefit of all BaRA Token Holders.

The Challenge

The Banksia Team will at three points need to decide to settle on a Royalty Deal or progress to the next round

Escrowed Clinical Rounds

Each time a Clinical Milestone is reached, or within a reasonable margin of error 'likely to be reached' the subsequent Round is de-escrowed to fund that round.

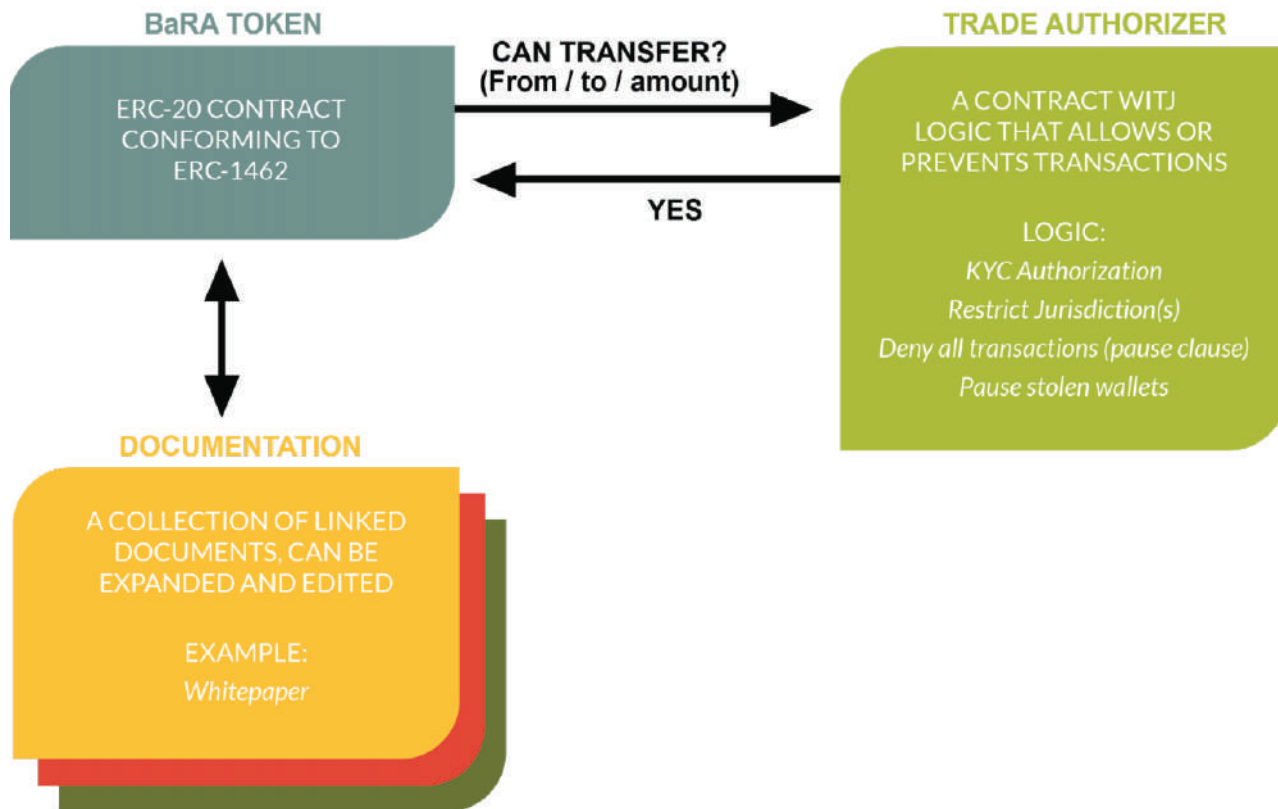

Burn Events

If a Royalty Deal is in place and there is no requirement to Clinically Develop the product any further all subsequent rounds of BaRA Tokens can and will be burned.

Benefits of the Burn

A BaRA Token burn event(s) will increase scarcity which would have a positive effect on their value. Further to this, all BaRA Tokens share an unchanging portion of the Overall Banksia BioPharm BaRA Royalty Pool. The fewer the tokens, the greater the individual token's percentage of the royalty pool. This increased yield potential would have a positive effect on their value too.

TOKEN STRUCTURE BREAKDOWN:

Platinum Project Information

Project Details:

Pukkamex is setting the gold standard for the exchange of the future. Pukkamex is the world's first leveraged cryptocurrency derivative trading platform that shares its revenue with its token holders. **Click to find out more.** Pukkamex is feature rich, easy to use, secure & reliable and is available in Arabic, English and other languages. Easy to use for the beginner and powerful enough for the most experienced trader. Pukkamex offers features never seen before. Pukkamex does everything our competitors do, we just do it bigger, faster and better. We also offer competitive features that will blow all other trading platforms right out of the water. With our copy trading platform you can copy top traders from the leader board in return for a percentage share of the profit you made; the platform does everything for you, all you have to do is follow your favorite trader. Our liquidation engine is forgiving, giving you a chance to make your money back and then some even if your position isn't initially going your way. No more waking up to blown up accounts, we liquidate positions incrementally. We support multiple languages including Arabic and English and offer a wide range of derivatives; whether you are day trading, investing or hedging you will find the best tools to compliment your trading strategy. Revenue share; 25% of gross revenue is distributed to PUX holders every Sunday at 12:00 GMT. Earn money by simply moving you're trading account to pukkamex and purchasing PUX tokens.

pukkamex just released its fully functional MVP and already has 50,000 users who have already registered on the platform after a highly successful referral campaign. The company's early private sale continues to attract very strong interest and is selling out quickly after opening early last week. The crowdsale will begin in July and run for a month or until the hardcap is reached. Interested parties are encouraged to contact contibute@pukkamex.com to secure a private sale allocation.

Token:

Roadmap:

Business And Media Partners:

ICO Details:

Ticker: PUX

Token Type: Go-20

ICO Token Price (USD): 0.050

Total Token Supply: 250,000,000.00

Available for token sale: 60%

Retained for team and strategic partnerships: 40%

Circulating Supply: 150,000,000.0

Market cap at ico price: 7,500,000.00

Fund Raising Hard cap (USD): 3,750,000.00

Soft Cap: 1,500,000.00

Hard Cap: 3,750,000.00

Whitelisting: Required

KYC: Required

Token Utility: Revenue share

The Team:

Ahmad Sharkatly
Chief Executive Officer

Mohammad Masri
Head of Compliance CTO

Fuad Abujaber
Chief Communication Officer

Mahmoud Sharkatly
Head of Business
Development

Laith Alghoul
Blockchain Engineer &
Frontend Lead

Alex Popov
Full Stack Developer &
Blockchain Engineer

The Advisory Board:

Nayef Copty
API, High Frequency &
Algo Trading Advisor

Shaikh Almualla
Director, Persici LTD

Naviin Kapoor
ICO and Blockchain Advisor

Kareem Darwazeh
Advisor on Ventures &
Strategic Partnerships

Sanem Avcil

Crypto Mining: An Additional Source of Income

Hi Platinum Crypto Followers,

In this article, we will cover if it is indeed possible to create an additional source of income from mining Bitcoin and Altcoins.

There is a lot some ground to cover, and we wanted to give you one comprehensive look at this particular type of passive income opportunity. But before we proceed please if you haven't already check out our previous article on Tether and impact on Bitcoins price..

What is it Cryptocurrency Mining?

Mining is the process of processing blocks on a blockchain, there are various systems, but Proof Of Work is the one which has had the most money thrown at it. This is because of its potential to generate passive income. How to start a mining quickly:-

- 1) Hook computers to a (preferably) cheap power source
- 2) Set them to process a special algorithm which determines the next Bitcoin or Ethereum block
- 3) If a specific computer gets the result right then, it is awarded a reward.

LEARN HOW TO TRADE CRYPTOCURRENCIES WITH A CRYPTO TRADER!

Additional terminology to help navigate this sector

Mining Crypto currencies has a mine field of terminology this section will help you navigate it

Mining Algorithm – The type of software which performs the “analysis” or “computing” needed to mine the coin this can be completed on Bitcoin, Ethereum and many other crypto currencies. A mining algorithm is best run on specific hardware or a mining rig.

Mining Rig – This is the hardware used to complete the mining

Cryptocurrency Block – This is the specific algorithm the Mining rig will be computing

HOW DO I START MINING BITCOINS?

Understanding bitcoins is just one aspect of jumping into the market. How can you make the most of your mining software to earn more bitcoins?

What Is Bitcoin Mining?

How did that fiver in your wallet get there? The U.S. government decided at some point to print and distribute it, and every business in the country (and others) agreed to accept it in exchange for goods and services.

Bitcoin mining is intentionally resource-intensive so that the number of blocks found each day by miners remains steady. This mimics the rate of availability of commodities like gold.

So You Want To Become A Bitcoin Miner?

STEP 01

Buy hardware

To begin mining, you have to use either a GPU card, FPGA or ASIC machine. If you're just starting out, an ASIC miner will be best for you.

STEP 02

Download free software

Your computer can become a bitcoin-mining zombie, even when you are not at the computer. If you want to mine more bitcoins, you need to buy some hardware. Most popular software: BFGminer, CGminer, EasyMiner

STEP 03

Get a wallet

You need a bitcoin wallet so you can keep track of and store the bitcoins you make from mining. Make sure you store your address in a safe and secure place and consider making a hard copy to be stored in a secret place. If your computer crashes and you lose access to your bitcoin wallet, you will lose your bitcoins. No one gets them; it is like burning money.

STEP 04

Join a pool

As more and more miners began competing for the limited supply of blocks, people found that they were working for months without finding a block and receiving no reward for their mining efforts.

This made mining something of a gamble. To even the odds, miners started organizing themselves into pools so that they could share rewards more evenly. Blocks are solved much faster by miners in pools, and bitcoins are distributed according to the amount of work each person put in.

\$942.63

Current market price of bitcoin

186

Blocks mined on a typical day

61,552

Number of transactions
on a typical day

7.74 minutes

Time between blocks

The logic behind is that Bitfinex prints more Tether, many people will invest in them. Investors may choose to either buy the Tether using fiat currency or exchange it with other cryptocurrencies: most prefer exchanging it with Bitcoin then later trade the Bitcoins for USD when the prices are higher. Consequently, the printing of Tether will result in a bullish movement in the market for Bitcoin. Changes in bitcoin's price will, in turn, affect other Cryptocurrencies.

How This Could Affect A Trader's & Your Portfolio

The investors will dominate the market, especially when it comes to Bitcoin. Efforts by sellers to bring the price down will be suppressed by the high volume of tether-bitcoin trade. Altcoins will be expected to follow the same trend as Bitcoin.

However, on the other hand, traders should beware of the devastating ripple effects that will be experienced in case Tether collapses. The collapse is indicated by the many controversies that are surrounding the Cryptocurrency. Many exchanges, which have their volumes trading against tether, will suffer together with the traders who rely on it during downtrends in the Crypto market.

Platinum Crypto Academy & How We Can Help

Do you want to build a giant Crypto Portfolio and learn exactly how to monetize it? Do you want to be free of your current role? Do you want to have the financial backing to do anything when and with you want?

There is a simple formula for what works, and anybody can do it: –

#1 Commit – This means sacrificing some things in life in order to commit to the goals you really want to accomplish

#2 Learn – Get Knowledge! If you lack anything, it's because you don't know something.

#3 Gain Confidence – This final point is a bi-product of commitment and knowledge, when you have this you will be able to navigate the markets with confidence and assertiveness, making decisions that will change your life!

Commit + Knowledge = Confidence

That's why when you get on **Platinum Crypto Academy** it may take a little time for the fruit of your time to begin to show but time does reveal everything.

Just as it was inevitable that the internet would be successful so it will be inevitable **YOU** will become more successful if you get on Platinum Crypto Academy and give it an honest effort.
