Editor's Letter

Strong bull runs are followed by sharp bear markets and the moves are exaggerated in the crypto markets. Newbie traders had taken on too much leverage when the markets were on fire and it was not uncommon to load up to 100-to-1 leverage. When the going is good, such huge leverage can quickly grow the account but the problem happens when the market turns. A sharp fall can wipe out months of gains for such traders.

LEDGER NANO X – THE GATEWAY TO EVERYTHING CRYPTO

Bitcoin's relief rally again turned down from the 38.2% Fibonacci retracement level at £28,593.47 on May 27. This suggests that traders are selling on every minor rally. Both moving averages are sloping down and the relative strength index (RSI) is in the negative territory, indicating bears have the upper hand. The sellers will now try to sink the BTC/GBP pair below the £23,620 support.

If they succeed, the pair could drop to the critical £21,000 to £20,000 support zone. A break below this zone could result in panic selling, which may pull the price down to £15,000.

The longer the price remains below the 20-day exponential moving average (EMA), the greater is the possibility of a continued downside. This negative view will invalidate if the bulls push and sustain the price above the 20-day EMA. Such a move will suggest strong buying at lower levels and the pair could rally to £31,005 and then to the 50-day simple moving average (SMA).

We will wait for the price to break out of the 20-day EMA and sustain it for a couple of days before suggesting fresh long positions.

Lastly please check out the advancement's happening in the cryptocurrency world.

Enjoy the issue!

WEEKLY CRYPTOCURRENCY MARKET ANALYSIS

Hello, Cryptonaire Weekly Community welcome to this week's 184th edition of Cryptonaire Weekly Magazine. The global crypto market cap is \$1.63 Trillion. We have seen a \$20 Billion decrease in the market cap since the last week. The total crypto market trading volume over the last 24 hours is \$112.65 Billion, which makes a 3.29 % increase. The total volume in DeFi is currently \$10.74 Billion, 9.54% of the total crypto market 24-hour trading volume. The volume of all stable coins is now \$94.93 Billion, which is 84.27% of the total crypto market 24-hour trading volume.

Bitcoin price is currently around \$36,550 from \$38,500 since last week and has decreased by 5.06% and Ether price is now at \$2,640 from \$2,600 since last week and has an increase by 1.54%. The current market cap for bitcoin is \$683 Billion, and for altcoins, the current market cap is \$947 Billion.

Strong bull runs are followed by sharp bear markets and the moves are exaggerated in the crypto markets. Newbie traders had taken on too much leverage when the markets were on fire and it was not uncommon to load up to 100-to-1 leverage. When the going is good, such huge leverage can quickly grow the account but the problem happens when the market turns. A sharp fall can wipe out months of gains for such traders.

The crypto markets have witnessed massive selling in May, resulting in one of the worst monthly declines for Bitcoin. After such a sharp fall, institutional investors are unlikely to be in a hurry to invest. They will wait for the price to stabilize and a bottom to be confirmed before buying.

When the sentiment is bearish, the markets generally disregard the good news. Billionaire investor Carl Icahn recently told Bloomberg that he is waiting to invest in the crypto markets in "a big way." When asked about the total amount he is planning to invest, Icahn did not commit a number but said it may be in the range of a billion to a billion-and-a-half dollars.

Revolutionary, Efficient and Trusted Crypto Gateway Payment System

Comprehensive Decentralized Blockchain
Platform For Instant Crypto Payment and
Efficient Ecommerce System

Buy Token

We're Glad You're Here

By implementing Blockchain technology and Smart Contracts, TICAN Ecosystem will create a new decentralized blockchain and comprehensive crypto infrastructure for everyday banking and merchant transactions

High Speed

TICAN blockchain's block size and block time are influenced by Ripple, Steem and Waves-NG blockchains and use similar principles to have fastest transaction settlement speed

DECENTRALIZED BLOCKCHAIN & COMPREHENSIVE INFRASTRUCTURE

API Suite

The comprehensive and defined API Suite on REST API standard, has been designed to not only work as another income generation stream for TICAN coin and token holders but also to let anyone use TICAN as a white-label solution to acquire more customers.

TICAN is a decentralized blockchain and an exhaustive crypto infrastructure that's designed to merge users, merchants and developers on a single platform for cryptocurrency based transactions and exchanges towards daily purpose business and merchant transactions.

Tican Coin (TIA) is a currency option for blockchain-backed products and services geared towards mainstream consumers. The project wants to elevate everyday experiences in making payments online for websites, ecommerce, merchants, API and more as a major payment gateway system.

CRYPTO TRADE OPPORTUNITIES

BITCOIN - BTC/GBP

COINBASE:BTCGBP, 1D 25939.99 ▼-260.01 (-0.99%) O:26199.16 H:26640.00 L:25733.33 C:25939.99

Bitcoin's relief rally again turned down from the 38.2% Fibonacci retracement level at £28,593.47 on May 27. This suggests that traders are selling on every minor rally.

Both moving averages are sloping down and the relative strength index (RSI) is in the negative territory, indicating bears have the upper hand. The sellers will now try to sink the BTC/GBP pair below the £23,620 support. If they succeed, the pair could drop to the critical £21,000 to £20,000 support zone. A break below this zone could result in panic selling, which may pull the price down to £15,000.

The longer the price remains below the 20-day exponential moving average (EMA), the greater is the possibility of a continued downside.

This negative view will invalidate if the bulls push and sustain the price above the 20-day EMA. Such a move will suggest strong buying at lower levels and the pair could rally to £31,005 and then to the 50-day simple moving average (SMA).

We will wait for the price to break out of the 20-day EMA and sustain it for a couple of days before suggesting fresh long positions.

ETHEREUM - ETH/GBP

COINBASE:ETHGBP, 1D 1880.35 ▼ -22.93 (-1.2%) O:1901.41 H:1926.37 L:1837.07 C:1880.35

Ether broke above the 38.2% Fibonacci retracement level of £1,935.11 on May 26 but the bulls could not push the price above the 20-day EMA. However, the positive sign is that bulls continue to buy at higher levels. This has resulted in the formation of a symmetrical triangle pattern.

If buyers can propel the price above the triangle and the 50-day SMA, it will suggest the end of the downtrend. The ETH/GBP pair could then rally to the 61.8% retracement level at £2,379.25.

This level may act as a stiff resistance but if the bulls do not allow the price to dip below the 20-day EMA, the pair could rise further to £2,695.43.

The 20-day EMA is flattening out and the RSI has risen above 47, indicating the bulls are trying to make a comeback. Traders may buy 50% of the usual allocation size on a breakout and close above the 50-day SMA.

This is a risky trade as the trend has not yet turned positive. Hence, risk-averse traders may wait for a better entry opportunity. The stop-loss for the trade can be kept below the support line of the triangle.

RIPPLE - XRP/GBP

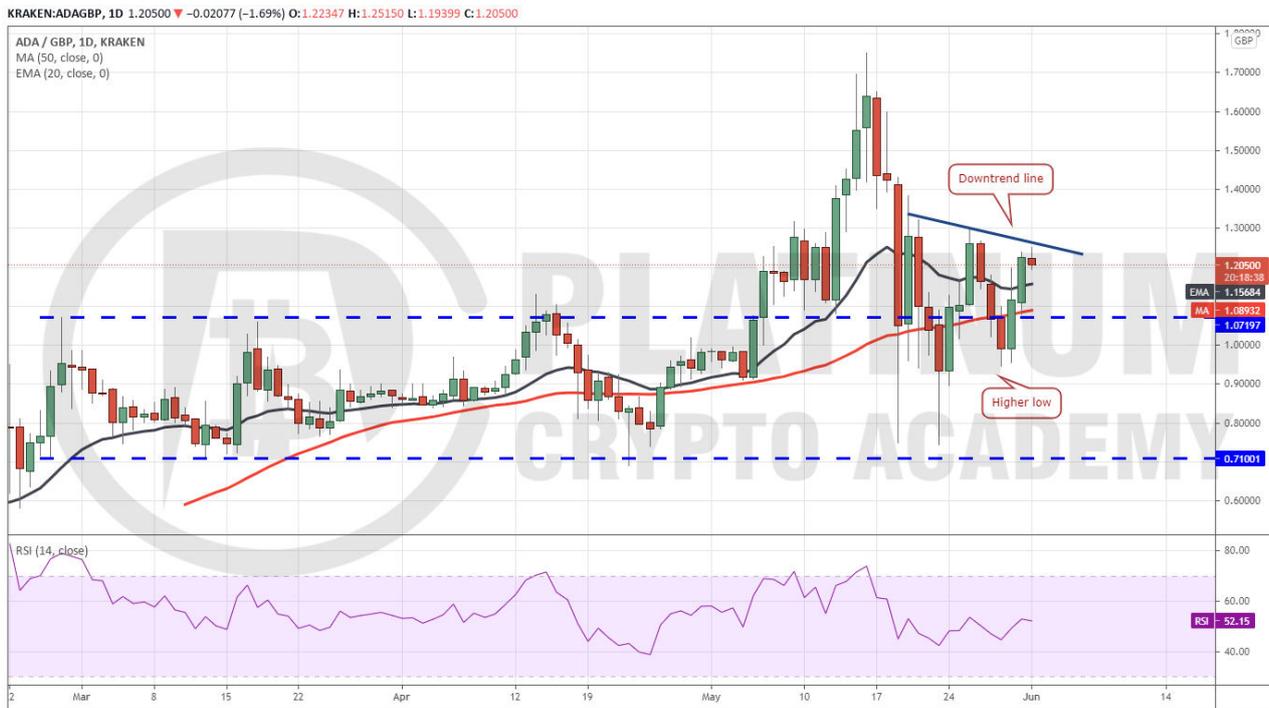

XRP is trading inside a descending channel. The bulls are attempting to stage a recovery but are facing resistance at the 20-day EMA.

If the bulls push the price above the 20-day EMA, the XRP/GBP pair could rally to the 50-day SMA, which is likely to act as a stiff resistance. The bulls will have to push the price above the resistance line of the channel to signal a change in trend.

Contrary to this assumption, if the price turns down from the current level, the bears will try to pull the price below £0.53566. If they succeed, the pair could drop to the support line of the channel.

The price action is likely to remain volatile for the next few days. As the pair has been a huge underperformer, we will wait for a reliable buy setup to form before recommending a trade in it.

CARDANO - ADA/GBP

Cardano is facing resistance at the downtrend line but the positive sign is that the bulls are attempting to form higher lows. The 20-day EMA is flat and the RSI is above the midpoint, indicating a balance between supply and demand.

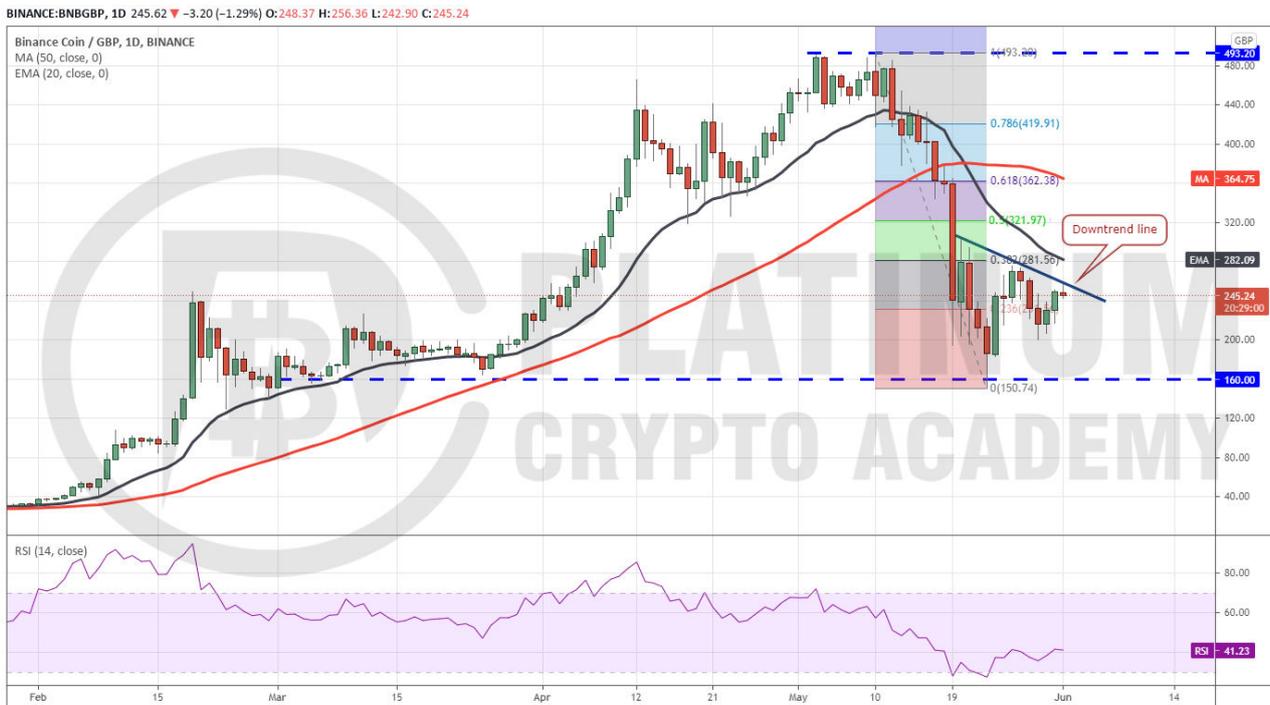

If the bulls push the price above the downtrend line, the ADA/GBP pair could move up to £1.40 and then to £1.60. If both these levels are crossed, the bulls may challenge the all-time high at £1.75137.

Conversely, if the price turns down from the downtrend line, the bears will try to pull the price below the £1.07197 support. If that happens, the pair could drop to £0.90. This is an important support to watch out for because if it cracks, the pair could witness sharp selling and drop to £0.71001.

Short-term traders may buy on a breakout and close above the downtrend line. This is a risky trade, hence keep the position size 50% of usual. The initial stop-loss could be kept at £1.05 but the stops should be raised quickly to reduce the risk.

If the price hesitates to climb higher after breaking above the downtrend line, positions should be closed as that could be a bull trap.

BINANCE - BNB/GBP

Binance Coin's relief rally hit a wall at the 38.2% Fibonacci retracement level at £281.56. However, the positive sign is that the bulls did not allow the price to drop below the support at £200. This suggests that traders are not waiting for a deeper correction to buy.

The relief rally is currently facing stiff resistance at the downtrend line. The downsloping 20-day EMA and the RSI below 42 suggest the bears are in control.

If the price turns down from the downtrend line, the bears will again try to break the £200 support. If they manage to do that, the BNB/GBP pair could drop to the £160 to £150.74 support zone. A break below this zone could start the next leg of the downtrend to £91.69.

On the contrary, if the bulls drive the price above the downtrend line and the 20-day EMA, the pair could extend its relief rally to the 50% retracement level at £321.97 and then to the 50-day SMA.

Aggressive traders may consider long positions on a breakout and close above £282. A close stop-loss can be kept as this is a counter-trend trade. If the price hesitates to move up after breaking out of the 20-day EMA, traders may close their positions.

PRESS RELEASE

AN INTRODUCTION TO AMBER GROUP – YOUR GATEWAY TO CRYPTO FINANCE

Amid greater crypto participation from an increasingly diverse group of investors, Amber Group is well-positioned to accelerate the democratization of crypto finance through highly accessible crypto finance tools.

Amber Group, the leading crypto finance service provider, is pleased to introduce its offerings to users of Platinum Crypto Academy and more users in the UK.

Amber Group is an integrated crypto finance platform that provides 24/7 global coverage for services, including market making, liquidity provision, asset management, and structured products. Founded in 2017, Amber Group is now a market leader in pricing, trading, and hedging cryptocurrency products. It has traded over \$330 billion since inception and exceeded \$1 billion in assets under management.

“Our goal is to help clients optimize investment flexibility and maximize investment returns over the long term,” says [Michael Wu](#), Co-founder, and CEO of Amber Group. “By working with Platinum Crypto Academy, we aim to offer our streamlined crypto finance experience to more clients around the world.”

With over 40 years in the financial education industry, Platinum Crypto Academy has been at the forefront of providing financial training for people looking to maximise trading opportunities and has successfully extended its in-depth educational resources to crypto enthusiasts over the last five years. Platinum Crypto Academy will release a series of materials exploring cryptocurrency adoption and Amber Group's crypto offerings as part of the partnership.

"Amber Group has emerged as a leader in the cryptocurrency space. The Platinum Crypto Academy team is proud to contribute to Amber Group's global expansion by leveraging its expertise in financial trading education," says [Karnav Shah](#), CEO of the Platinum Group.

Founded by finance professionals from Goldman Sachs, Morgan Stanley, and Bloomberg, Amber Group is trusted by over 500 institutions, family offices, and HNWIs. The company has partnered with industry-leading security infrastructure providers, including Fireblocks and BitGo. Furthermore, Amber Group is registered with US Financial Crimes Enforcement Network (FinCEN) as a Money Services Business and Canada Financial Transactions and Reports Analysis Centre (FinTRAC).

In 2019, Amber Group raised \$28 million in Series A funding led by global crypto heavyweights Paradigm and Pantera Capital, with participation from Polychain Capital, Dragonfly Capital, Blockchain.com, Fenbushi Capital, and Coinbase Ventures.

For more information about Amber Group, please visit www.ambergroup.io.

GAUGE CASH – A DEFI MONETARY SYSTEM

GAUGE CASH, the first DeFi Monetary System available to crypto users, recently appointed Platinum Crypto Academy and Cryptonaire Weekly Magazine to support and further their platform among cryptocurrency enthusiasts. The platform, expected to hit the market in the fourth quarter of 2021, with technology integrations on Avalanche and Chainlink, will solve the issue of decentralization, as well as the long-term stability of assets.

Post its appointment, Platinum Crypto Academy, along with Cryptonaire Weekly, will provide crypto users with the latest information and updates about the GAUGE CASH system.

Talking about the appointment, GAUGE CASH's Founder stated, *"We believe that Platinum Crypto Academy has the much-required experience and extensive knowledge needed to support as well as further our unique DeFi Monetary System. Our combined efforts and knowledge will help us create opportunities for the global crypto market."*

It must be noted that in the past century, more than 30 Non-Domestic Currency Debt Crises resulted in millions of individuals losing all their wealth, along with the transactional value. As far as the major fiat currencies such as EUR, USD, GBP, JPY, CHF are concerned, only CHF has been the currency in the twenty-first century that has managed to hold positive PP or purchasing power. This implies that its relation with inflation has been negative. Despite this, the Swiss National Bank in 2015 abandoned the EUR/CHF floor at 1.20 euros, which resulted in chaos around the fiat currency markets.

GAUGE CASH's Index helps solve this problem by ensuring that people get the best PP or purchasing power in the future. GAUGE CASH's Decentralized Monetary System has two primary components, including the index that comes from the Final Market Making of the FX market, and is much more stable when compared to other global currencies, including Silver and Gold. GAUGE CASH has also backed up its currency with the help of the blockchain class. This provides value to both users and investors in an immutable and decentralized manner.

GAUGE CASH aims to make its liquidity pool, GAUGE FIELD, a profitable investment by taking Tether's present volume of a hundred billion USD average per day. The company will ensure that GAUGE CASH gets globally adopted and becomes a benchmark for pricing and exchanging goods and services across the globe. Users interested in investing in GAUGE CASH can join the presale currently being held by the company. Once the tokens are sold out, GAUGE CASH will release its second 100M GAUF. Currently, 1GAUF is valued at 0.1 AVAX and brings a yield of 30x. GAUGE CASH's liquidity pool, GAUGE FIELD, will only wrap AVAXs for measuring Yield timelines for Staking, making it public. As a result, investors will incur huge gains for chasing Tether first and thereafter, the leading currency pair EUR/USD.

Individuals who don't prefer the obvious economic pitfalls and centralization offered by the Stablecoins, along with token representations USDC, Tether, TUSD, etc., can take their cryptocurrency and invest it in GAUGE CASH. GAUGE CASH shall come into existence in the form of a free-of-cost service, and covers all the market demands in the cryptocurrency space.

Manual Blanco Founder of Gaugecash expressed *"It's an absolute pleasure to be working with Platinum Crypto Academy to reach their audience. Gaugecash needs the support for quality organisations to bring attention to the project to help bring adoption, Platinum Crypto Academy having developed an audience dedicated to cryptos over the past 4 years is a perfect partner for us and we are excited to be featured in Cryptonaire weekly"*.

The Chief Editor of "[Cryptonaire Weekly](#)" [Karnav Shah](#) expressed It's extremely exciting to partner with a company like Gaugecash, A DeFi Monetary System. The protocol is a decentralized, digital asset-backed, peer to peer stable cash system, which provides incentives for crypto asset investors providing a stable cryptocurrency. The Platinum Crypto Academy looks forward to working with Gaugecash on gaining maximum exposure to the crypto community.

For more details about GAUGE CASH, visit <https://www.gaugecash.com/>

ADVANCEMENTS IN THE CRYPTOCURRENCY WORLD

Coincheck crypto exchange announces Japan's first ever IEO

The Hashpalette token sale on Coincheck is set to become Japan's maiden initial exchange offering event.

Coincheck's goal of conducting the first-ever initial exchange offering in Japan is moving closer to becoming a reality.

According to a release issued on Monday, the Japanese crypto exchange announced that the Hashpalette (HPT) initial exchange offering will take place in the summer. IEOs are a modified form of initial coin offering, where a crypto exchange platform acts as an intermediary between token issuers and investors.

Coincheck partnered with Hashpalette back in August 2020, with plans for HPT to become the first IEO-issued utility token in the Japanese crypto market. At the time, the plan was coming on the heels of newly passed cryptocurrency laws in Japan, creating a clear-cut legal framework for token sale events among other market segments.

Bitcoin Will Surge 500% This Year As Tsunami of Cash Comes Back to Crypto, Says BTC Firebrand Max Keiser

Early Bitcoin investor and proponent Max Keiser is undeterred by the recent crypto market crash.

In a new interview on The Wolf of All Streets podcast, Keiser says massive money printing and fresh signs of inflation will force companies to increasingly buy BTC this year.

He sees corporations taking part in a Bitcoin buying spree that fuels a 500% price surge by the end of 2021.

“When corporate America really runs out of room to finagle and to escape the Bitcoin reality, they’ve got to make the move. I think it happens in 2021. My price target for 2021 is still \$220,000 per Bitcoin. It’s an aggressive price target, but it’s based on the US dollar running into severe trouble.”

Keiser points to MicroStrategy’s initial \$1 billion Bitcoin purchase, spearheaded by CEO Michael Saylor, as the tipping point for an era of corporate investment in Bitcoin.

“He’s thrown down the gauntlet. And so now, every CFO and every CEO and every board member of every public company now has to take that on board.”

Keiser also highlights comments from legendary institutional investor Paul Tudor Jones, who says BTC is a digital form of gold that’s likely the fastest horse in the race in an era of inflation.

UK Banks Suspend Payments to Crypto Exchanges Due to “High Levels of Suspected Financial Crime”

Barclays, Starling, and Mozo are blocking their customers from transferring money to cryptocurrency platforms like Binance and Swiss Borg.

These banks are cracking down on transfers to crypto exchanges in recent weeks by suspending payments to the sector, reported local media.

Earlier this year, HSBC and other unmentioned banks had stopped processing cryptocurrency payments. Besides not allowing their users to make transfers between bank accounts and digital wallets, the banks also didn't let their customers use credit cards to buy or sell BTC.

Online bank, Starling has now suspended all payments to crypto exchanges, citing *“high levels of suspected financial crime with such payment.”*

However, *“This is a temporary measure that we’ve taken to protect customers,”* said the bank’s spokesman. The added,

“This is not just an issue for Starling, but for all banks. We apologize for the inconvenience that this has caused for some customers; we will be reversing this measure as we roll out additional checks specifically for payments to crypto exchanges.”

Average Bitcoin Transaction Fee Hits Lowest Level Since January As Market Cools Down

And thanks to new restrictions on Bitcoin mining in China, fewer computers are competing for blocks.

The average Bitcoin transaction fee is now 0.0002 BTC, or around \$7.

That's the lowest it's been since January 1, according to data from BitInfoCharts.

Average Bitcoin transaction fees have sunk to lows of \$7, according to data from blockchain analytics site BitInfoCharts. Fees haven't been this low since January.

The Bitcoin blockchain charges a fee for each transaction and distributes the proceeds to miners.

Fees rise when demand for processing transactions outstrips the supply of miners. On April 21, average fees hit a record high of \$62.8 per transaction.

Conversely, fees fall when mining supply outstrips demand. The drop in fees suggests Bitcoiners aren't as interested in placing transactions as they were just over a month ago.

That could have something to do with the recent crash in the crypto markets, which sent the price of Bitcoin down from \$60,000 to \$36,000 in just a few weeks.

DeFi Tokens Rally As Ethereum Jumps 11%

As the crypto market rises from its weekend slumber, Ethereum racks up some significant gains.

The price of Ethereum has increased by 11% in the past 24 hours to highs of \$2,640. The rise caps off a 24% increase in the past week.

Ethereum has brought several coins that use its smart contracts along for the ride. Most of the top decentralized finance (DeFi) tokens have also increased in price in the past day.

DeFi growth

Uniswap (UNI), which has a market cap of \$15.6 billion and is the largest DeFi token by this measure, has risen by 12% in the past day. At a price of \$27, the coin, which powers the governance protocol of the eponymous decentralized exchange, has increased by nearly 28% during the past week.

Chainlink (LINK)—UNI's closest competitor with a market cap of \$13.4 billion—has increased by 15% today and by a staggering 32% during the past week. Currently, LINK, which powers a decentralized oracle network, is worth \$31.

Other DeFi tokens have also grown in the past week. Aave (AAVE) and Maker (MKR) have increased by just over 10% in the past day and by 6% and 1% over the past seven days, respectively.

Binance NFT Marketplace looks to capture market share via ‘100 Creators Campaign’

In an effort to attract users, Binance is casting a wide net to bring in artists, celebrities and athletes.

In an increasingly crowded marketplace for marketplaces, Binance is going on the offensive with a business development push aimed at bringing “100 Creators” to their forthcoming nonfungible token (NFT) platform.

In a press release today, Binance announced an NFT drop from Misha Most, a noted street artist who currently holds the world record for the largest wall mural. Most will be making 10 NFTs in collaboration with other artists, and the pieces will be available for sale in the first week of launch of the marketplace, currently scheduled for June 24th.

“Digital art is imbued with the spirit of the community. As a street artist, it's very close to me, and I'm used to working in a team with other creators,” said Most in the press release. “Working on NFT is a unique opportunity for me to collaborate with digital artists. For me, the transformation of familiar works into digital art is primarily an experiment, and real art is about that.”

Most joins a host of other artists, celebrities and athletes who have been courted by Binance, including soccer players Michael Owen and Alphonso Davis, singer-songwriter Lewis Capaldi and artist Trevor Jones.

Tech Giants 'Invading the Currency Area' Are The Real Threat, Not Crypto: Denmark's Central Bank Governor

While Lars Rohde doesn't see Bitcoin as more than a speculative fad, neighboring Sweden's Riksbank First Deputy Governor, though "observant," is not concerned about cryptos.

Bitcoin and cryptocurrencies are little more than a speculative fad, said Lars Rohde, Denmark's central bank governor.

Rohde said he's "*tempted to ignore*" Bitcoin and other crypto-assets. "*It's a very speculative asset at best. There is no stability and no guarantee from any side about the value of cryptocurrencies.*"

According to him, central bankers can probably ignore cryptocurrencies as there are much more serious threats coming from big tech.

In an interview with Bloomberg, he said, if the tech giants start "invading the currency area" and the means of transaction, then "*that could be very interesting and maybe also a real threat to the autonomy and independence of central banks.*"

Similar warnings about the dominance of digital payments upending the age-old framework within which monetary policy has operated were given by Bank of England Deputy Governor Jon Cunliffe earlier this month. Pointing to the "*financial stability implications*" of such a development, he said governments and policymakers need to ensure they don't get overtaken by private providers of payment services.

BitMEX, Human Rights Foundation Award Bitcoin Developer Grants Worth \$150K

South Korea-based Calvin Kim works primarily on the bitcoin scaling project Utreexo.

Calvin Kim, a developer who works on improving Bitcoin's scalability, is to receive \$150,000 in funding to support his work.

Announced in a blog post on Monday, cryptocurrency derivatives exchange BitMEX said it will extend Kim's funding until June 2022 with a grant for \$100,000. He previously received \$30,000 in August 2020, the exchange said.

BitMEX said it has also collaborated with the Human Rights Foundation, which is also now funding Kim to the tune of \$50,000 in bitcoin (BTC, -0.09%).

South Korea-based Kim primarily works on the Utreexo project, which has developed a way to store all of Bitcoin's unspent transaction outputs (the record of who owns which bitcoin) in less than 1 kilobyte instead of in gigabytes.

"We are delighted to extend our financial support for Calvin for another year," said BitMEX CEO Alex Höptner. "In particular we are pleased to support a Korean developer such as Calvin, as ensuring the geographic diversity of Bitcoin development is an important factor to consider."

Reserve Bank of India slams banks after they stop services for crypto users

The nation's central bank said an old report from 2018 was no longer valid for actions taken by private banks today.

The Reserve Bank of India, the country's central bank, released a new directive today after local banks ceased crypto services for users citing a directive from 2018, an official filing shows.

"It has come to our attention through media reports that certain banks/ regulated entities have cautioned their customers against dealing in virtual currencies by making a reference to the RBI circular dated April 06, 2018," the bank stated.

Not in effect

It added that such references to the above circular by banks/ regulated entities were "not in order" after the circular was set aside by the Hon'ble Supreme Court on March 04, 2020.

India has a rather shaky relationship with cryptocurrencies, primarily due to the way its financial structure is governed. The country's Financial ministry, which oversees all financial innovation in the country, is suggestively more crypto-friendly than the RBI, which controls how the rupee is issued and circulated and views cryptocurrencies as a 'threat.'

Singapore Bank DBS Issues \$11.3 Million in Blockchain Bonds

The announcement comes just a few months after DBS launched its crypto exchange.

DBS, a multinational bank based in Singapore, has announced a new tokenized bond. It's part of an \$11.3 million (S\$15 million) STO.

Southeast Asia's largest bank, Singapore-based DBS, has become the latest bank to issue a bond on the blockchain.

Issuers hope that couching traditional securities in a crypto framework can make them easier to trade. The process also allows for fractionalization; cutting up bonds and turning them into fungible tokens can make unwieldy investments a little more digestible.

DBS announced today that it has priced the blockchain bonds that will power its upcoming security token offering at \$11.3 million. STOs sell cryptocurrencies that represent off-chain securities (like stocks). As with ICOs (initial coin offerings), they're a way to raise capital.

Santander Bank, Société Générale, and the World Bank have all issued blockchain-based bonds in recent years. Last month, the European Investment Bank sold \$121 million worth of two-year notes on Ethereum.

TICAN – THE TRUSTED AND EFFICIENT CRYPTO PAYMENT GATEWAY

Today's article explores a crypto payment gateway solution Tican, examining the need and requirement in the emerging space.

WHAT ARE SMART CONTRACTS ON BLOCKCHAIN?

Smart contracts are self-executing business automation applications that run on a decentralised network such as blockchain.

And because they're able to remove administrative overhead, smart contracts are one of most attractive features associated with blockchain technology. While blockchain acts as a kind of database, confirming that transactions have taken place, smart contracts execute pre-determined conditions.

While blockchain acts as a kind of database, confirming that transactions have taken place, smart contracts execute pre-determined conditions

WHAT IS TICAN CRYPTO INFRASTRUCTURE?

TICAN Crypto infrastructure is a decentralised blockchain that's designed to merge users, merchants and developers on a single platform for cryptocurrency based transactions (payment gateway) and exchanges towards daily purpose business and merchant transactions.

HOW DOES THE TICAN ECOSYSTEM IMPLEMENT BLOCKCHAIN AND SMART CONTRACTS FOR BANKING MERCHANT TRANSACTIONS?

Running inside the TICAN iFiat ecosystem on the TICAN blockchain is a merchant app that provides near instantaneous transactions with nil transaction fees. A blessing the merchants world-over were waiting for. The merchant application works in our TICAN iFiat Ecosystem that runs on TICAN blockchain, which is one of the cheapest and fastest blockchains to date; and our fiat pegged tokens, which we call iFiats (i.e. iUSD, iEUR etc.), are floating in this ecosystem, such that when users in the TICAN user app exchange, their crypto assets and transfer them to their iBucket (either by TICAN Trading Bot, TICAN AI engine or manually), they can instantly spend the funds in the TICAN merchant app, and the merchant would receive the funds in less than three seconds, and it can handle up to 6,000 transactions in one minute.

Once merchants receive the funds in their own iBucket, they can either order a card and load the fund onto the card or withdraw the money into their local bank accounts, or simply spend it in any of other TICAN Merchant applications (payment gateway), POS terminals or online merchants. The other advantage of this method is that merchants won't bear the crypto market fluctuation risks, as they would receive the exact fiat value in their wallets; also, they don't need to acquire a complicated system to keep track of the market to translate the dollar value to crypto value of users, which means there is no need to have multiple labelling and pricing systems for their goods or services.

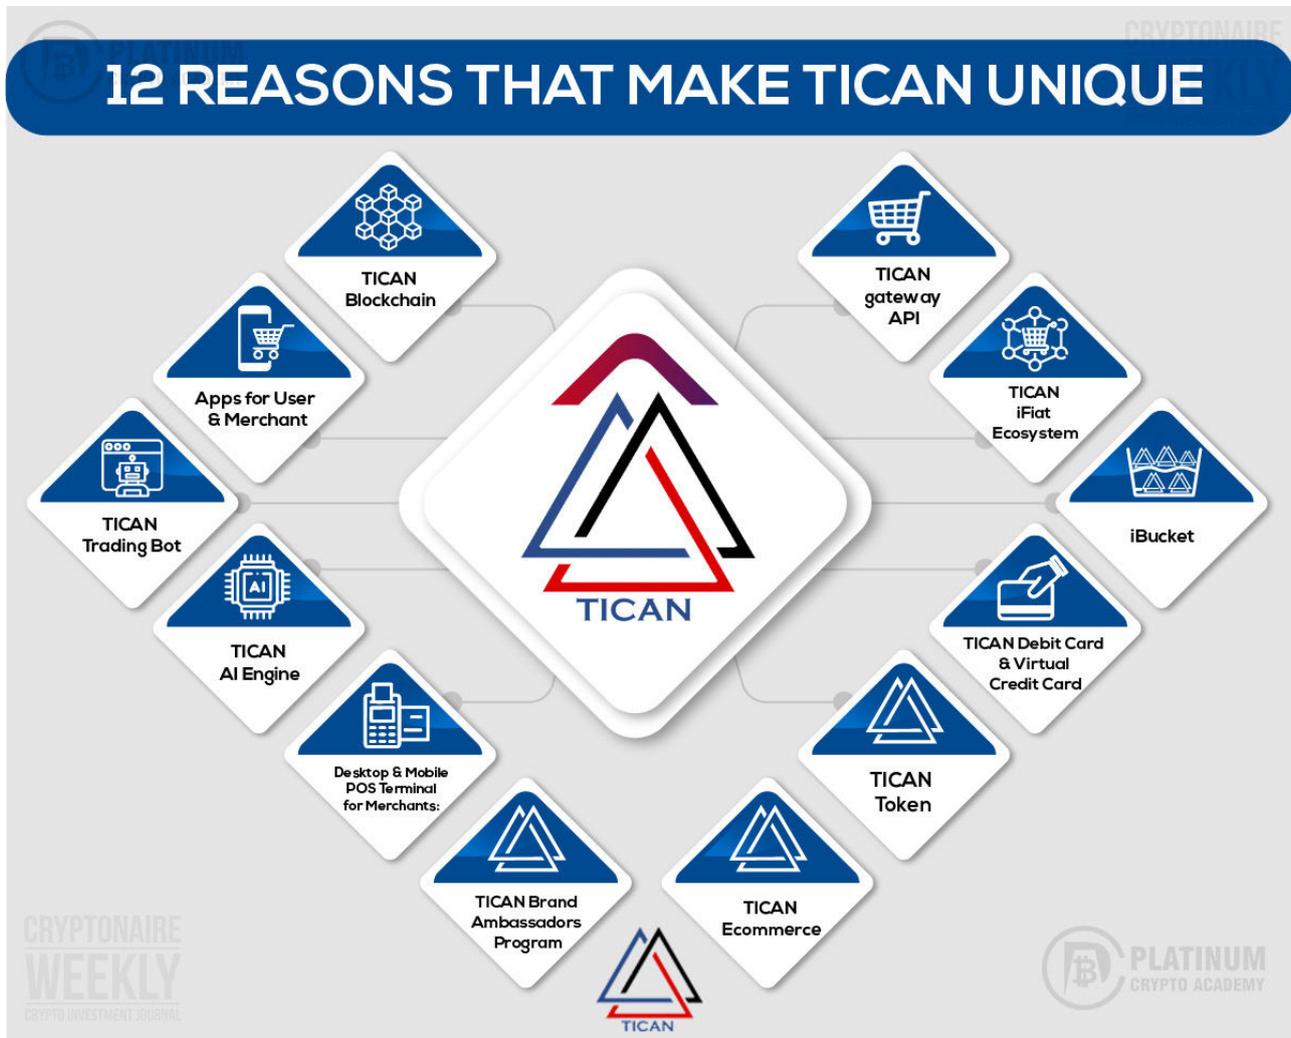

WHAT MAKES TICAN UNIQUE IN THE CRYPTO SPACE?

Given the current market scenario and the competition that it offers in terms of new crypto economy based companies, here are 12 reasons that make TICAN unique and way above the rest:

TICAN Blockchain: With its high speed and very low transaction fees, the TICAN Blockchain is way different from the rest. Completely decentralised and highly scalable, the blockchain has Smart Contracts for daily transactions with total reliability and security. TICAN Blockchain's block size and block time are influenced by Ripple and Stellar Blockchains. Using similar principles, TICAN Blockchain has the fastest transaction settlement speed ever. Using our tailored blockchain, we can greatly reduce the cost of transactions, making them almost free. Users and merchants need not worry about transaction fees. A token generator engine and a block explorer to duly record every transaction with transparency are other added highlights.

Apps for User & Merchant: For the very first time, merchants along with the users would have a specialised app that's simple and easy to use. Running inside the TICAN iFiat ecosystem on the TICAN Blockchain, the app provides near instantaneous transactions with nil transaction fees. A blessing the merchants world-over were waiting for. For regular users, the multi-currency wallet app is designed to accommodate up to 20 various cryptocurrencies – one of the highest in terms of wallet capacity in the prevalent market.

12 REASONS THAT MAKE TICAN UNIQUE

A TICAN Trading Bot: A smart trading bot that allows users to load multiple assets, thereby providing maximum gain from the cryptocurrency transactions. The bot also lets users to set conditions for transactions and the bot executes the trade when the conditions are met. This gives enormous freedom to users in customising trade conditions for maximising gains.

TICAN AI Engine: Based on the machine-learning and decision-making algorithm, the AI Engine is designed to advise users the best time for cryptocurrency to iFiat conversion to obtain the highest gain. The engine also uses several other sophisticated trade algorithms and market forecasts to deliver the most accurate outcome.

Desktop & Mobile POS Terminal for Merchants: Again, the first-of-its-kind, the POS terminal lets merchants receive any cryptocurrency and conversion of iFiat to Debit Card, Virtual Credit Card or bank transfers to account. The POS terminal offers 0% transaction fees, near instantaneous transaction speeds (as it runs inside the TICAN iFiat ecosystem) and can be installed at any location world-over. With this in place, virtually every retail store in the world can use the POS machines to receive cryptocurrency as means of exchange.

TICAN gateway API: Available in GitHub and an open-source, the API lets the user create a payment gateway of his/her own. With this enhancement, any online store can now accept cryptocurrency transactions simply by connecting to the TICAN payment gateway API. Ready and easy to install plug-ins offer additional benefits.

TICAN iFiat Ecosystem: The ecosystem runs on the TICAN Blockchain, thereby eliminating the need for any third-party untested, expensive and slow blockchains. The ecosystem offers the usage of iFiat like any other cryptocurrency with very small transaction fees. The iFiat runs through a decentralised exchange (DEX) on the blockchain.

iBucket: This can be termed as a decentralised wallet for iFiat tokens. Merchants are not charged any transaction fees when dealing with iFiat tokens, hence this makes it a coveted transaction method. Whether converting cryptocurrency to iFiat or using iFiat tokens for transactions, the iBucket provides the repository for any-time use, thus shielding the users from market volatilities and thereby maximising gains.

TICAN Debit Card & Virtual Credit Card: Designed to be accepted by over 25,000,000 stores world-wide, the unique feature of this card is the provision that it provides to the users to load the card for any transaction settlement within a few seconds. Various transaction limits have been set depending on complete or partial KYC that's bound to suit everyone's specification and need.

TICAN Token: TICAN's internal cryptocurrency TIA is different from the rest in a way that it offers multiple revenue generation sources. All internal transactions, purchases and trading are charged in TIA, thereby ensuring liquidity and long-term stability. TIA is truly a value-added coin for users.

TICAN ECOMMERCE – PAYMENT GATEWAY

The TICAN ecommerce platform is revolutionary, featuring low-cost quality products from around the world. People from wherever can buy stuff using TIA via TICAN wallet and avoid unnecessary charges/spending, and get products shipped to their locations. The ecommerce platform also features all the necessary tools for creating and developing online shops. Unlike similar projects, the TICAN ecommerce platform is powered by blockchain and uses smart contracts. This innovation differs the platform from other e-commerce platforms. Manufacturers also don't have to spend a lot of money and resources just to create an e-shop. They can upload their products to the platform and receive purchases from buyers from around the world.

TICAN BRAND AMBASSADORS PROGRAM

With The TICAN BRAND AMBASSADOR PROGRAM, members can enjoy benefits quickly and easily via TICAN users' network and products. A TICAN Brand Ambassador can accumulate TICAN Coins (TIA) and enjoy special bonuses with sales from TICAN products/services and affiliate benefits.

CONCLUSION – TICAN CRYPTO PAYMENT GATEWAY

TICAN (TIA) is a payment gateway innovation; a multi gateway payment system that accepts Bitcoin, Ethereum, Litecoin, and USDT.

By implementing blockchain technology and Smart Contracts, TICAN Ecosystem has created a new decentralised blockchain and comprehensive crypto infrastructure for everyday banking and merchant transactions.

TICAN ecosystem offers the usage of iFiat like any other cryptocurrency with very little transaction fees. The iFiat runs through a decentralised exchange (DEX) on the blockchain.

IZOBI ECOSYSTEM – BRIDGE TO THE CRYPTO COMMUNITY

The cryptocurrency industry keeps getting better and bigger each passing day. Would you like to be part of it? That has most likely been on your mind, and the only problem is a chance to do so. You might not need to look for it longer. As an investor looking for a cryptocurrency-investing opportunity with high chances of it paying off eventually, look no further. After all, the iZOBi Ecosystem offers you precisely that. Would you want to buy a crypto token for as low as €0.05? Your answer will most likely be yes, since such opportunities are hard to come by. However, it exists no doubt, and all you have to do is take that first step.

However, before doing so, it would be nice to understand what you are getting yourself into to be sure it is worth the risk. That's why this article focuses on the iZOBi Ecosystem, its crypto token, and the cryptocurrency-investing opportunity it offers anyone looking for ways of joining the crypto sector. Read on to find out that and much more about the platform.

HOW DOES THE IZOBI ECOSYSTEM WORK?

PLATINUM **CRYPTONAIRE WEEKLY**

THE IZOBI ECOSYSTEM OFFERS YOU THE OPTIMAL SOLUTION

The infographic illustrates the IZOBI ecosystem. At the center is a smartphone displaying the IZOBI app interface with the question "What service are you looking for?" and a grid of service icons: CLEANING, ENVIRONMENT, ELECTRICIAN, PLUMBER, HANDYMAN, REFURBISH, CARE/ASSISTANCE, TEACHER, BABY SITTING, and PET SITTING. Each service is represented by a circular icon with an illustration of a professional. The background features a light blue grid pattern. At the bottom, a "SERVICE PROVIDER" in a suit and a "CUSTOMER" in a yellow shirt stand on either side of a large black diamond-shaped logo containing a stylized yellow and orange number "2".

THE IZOBI TOKENS MAKE IT POSSIBLE FOR PEOPLE IN CRYPTOCURRENCY INVESTING TO BENEFIT FROM IT DAILY.

iZOBi Ecosystem will be created for a platform that offers services to homeowners on demand. It will use blockchain technology and will keep evolving as time goes by. With its help, its users will readily engage with various service providers. Doing that will be as easy as it could get. The Ecosystem will also prioritise safety and security due to their importance in such a situation. Last but not least, the transaction cost will also be affordable and reasonable.

However, unlike other on-demand ecosystems, this one will be controlled by the iZOBi token. Interestingly, any platform offering home services on demand will be at liberty to utilise iZOBi technology and iZOBi Ecosystem. After all, they will be free and open-source.

This Ecosystem will have two major modules. One of them will focus on the service providers, whereas the other will serve the customers in this case. As a customer, you will have two different hourly rates to choose from every time you want to order a service. Upon doing so, what you will have to do is wait for a handyman to accept your work. Once it is complete, you will pay the service provider using a credit card, debit card or iZOBi tokens.

The bottom line is that it works like most similar apps, including the famous Uber app. Using it is as simple as searching for a service provider and then getting in touch for the job to be completed as per your requirements. You get the job done and the handyman earns some bucks. Since you may need those services daily, the designers have made it as simple as possible. It is a win-win situation for both homeowners and handymen, indeed.

PROBLEMS WITH THE CURRENT ON-DEMAND ECOSYSTEM

As of now, the on-demand ecosystem is facing several challenges. Let's take a look at them.

1) High risk during hires

One of them is having to take a huge risk as you hire a service provider. There is no way of being guaranteed that the person you hire for the job will do well. For instance, what do you do upon hiring a cleaner who doesn't do your floors the justice they deserve? How fair is it to pay someone your hard-earned money who hasn't done the job well? There is nothing acceptable about it. However, you find yourself having to do so to avoid confrontation. Otherwise, you might end up exchanging insults, which is also degrading. Who wouldn't want an ecosystem that makes that a thing of the past?

2) A time-consuming and complicated hiring process

Another issue with the current on-demand ecosystem is the complicated process. It makes it hard to locate a specialist who will do an excellent job in the first place. As a matter of fact, customers spend a lot of time finding a service provider. There is a wide array of listings, apps and websites offering platforms where customers and service providers can communicate and even initiate a collaboration. Unfortunately, they ended up doing more harm than good. They are confusing, with unfair terms and conditions.

3) Availability of middlemen

The on-demand ecosystem also faces the common issue associated with go-betweens. The platform owners end up pocketing quite a chunk of the money. As much as a platform fee is justifiable, the fraction is often too significant. As a result of that, service providers may receive peanuts, despite customers paying handsomely for their work.

4) Lack of industrial leadership

The biggest company in this ecosystem takes up a small percentage of the entire market – 10% to be precise. The fact that it is that small means that the industry doesn't have giants. The missing industry leaders have left the sector without role models or a particular path to follow. Without that, a problem is bound to happen. Last but not least, worldwide standards are still not well outlined.

These are problems that could have been solved like yesterday. As long as they remain unsolved, the involved parties will continue suffering and being inconvenienced. The customers are the most affected, and so are the service providers to some extent. Is it all lost, and they have to learn to live with them? Not at all.

THE IZOBI ECOSYSTEM OFFERS YOU THE OPTIMAL SOLUTION

Fortunately, the iZOBI Ecosystem has what it takes to solve the issues. The main problem with the existing on-demand ecosystem is conflict. iZOBI Ecosystem designers understand that all too well, explaining why they have chosen to adopt blockchain technology.

Thanks to such cryptocurrency investing, you will also save a lot of time. For instance, there are over ten services provided on the Ecosystem. As a result, you don't need to have several apps for the various services. Instead, visit the site and get almost every service you may need to maintain your house. One can say without any fear of contradiction that it manages all home services.

Equally importantly, all the services are already described in the app. Consequently, you won't spend a lot of time jotting down the services you are looking for. On the contrary, your job will be checking the boxes, which doesn't take much of your time. Therefore, a homeowner will book a handyman to do what's needed to be done within a short time.

The Ecosystem also eliminates middlemen who have for a long time exploited customers and service providers. That would be good news to the two parties since the customer will pay less, whereas the service providers will pocket more.

Last but not least, you only pay once your job is completed as per your requirements. Interestingly, you have a myriad of options when making payments. From credit cards to debit cards, there are various payment methods. The most outstanding one is using crypto tokens to pay for the services. The iZOBI tokens make it possible for people in cryptocurrency investing to benefit from it daily. After all, you get to pay for your home services using crypto tokens.

WHAT ARE TOKENS IN THE IZOBI ECOSYSTEM?

Tokens in the iZOBI Ecosystem will be the main currency for every transaction or payment carried out using the platform. The crypto tokens are built using the BEP-20 protocol, which is based on the Binance Smart Chain. Additionally, it ensures any buyer owns a certain percentage of the funds going towards the investment of the iZOBI platform. Each crypto token is created and sold under iZOBI, whereas a Smart Contract regulates the sales. The Binance Blockchain deploys it on this platform as a decentralised BEP20 token. All that is done to protect every participant and at the same time maintain a high level of transparency.

As far as the iZOBI Ecosystem is concerned, the crypto token is used in various ways. First, a customer can use them to pay a handyman for his services. Secondly, the service providers receive them as bonuses. Therefore, they are a crucial part of this Ecosystem as they benefit all the involved parties.

HOW IZOBI ECOSYSTEM IS THE SAFEST

The importance of safety is indisputable, especially when working with home service on-demand services. For instance, the customer wants a place to get service providers who will work as per their demands. They don't want to pay for mediocre services since everyone appreciates the value for money. On the other hand, the service provider doesn't want to work hard only to go unrewarded. Fortunately, the iZOBI Ecosystem uses blockchain technology to make its platform as safe as possible.

It will ensure that every contract signed between a customer and a service provider is recorded. To avoid duplication that could lead to confusion, each record has a unique digital code. In addition to that, the records are stored in a shared database to ensure transparency at all times. However, no one can delete, edit or update existing records.

Under such circumstances, conflicts would be minimal. What do you expect when each payment, task, process or agreement is in the form of a digital record with a signature? First of all, sharing and storing the records would be a breeze. One would also easily identify a transaction and, above all, validate it.

Consequently, intermediaries and mediators may be unnecessary. Bankers, brokers and lawyers will no longer be part of the equation. On the contrary, organisations, individuals, algorithms and machines will interact seamlessly and perform various transactions without conflicts. That is only possible with the blockchain, and that's why the iZOBI app has prioritised it.

IZOBI ECOSYSTEM OFFERS CRYPTOCURRENCY-INVESTING BENEFITS

If you are looking for a cryptocurrency-investing opportunity, the iZOBi Ecosystem is worth your time and money. The platform has an ICO program that gives you a chance to get a crypto token or as much as you wish. By buying them, you become an owner of a certain percentage of the investment. You can exchange it with any asset or choose to trade them, and in both cases, you are most likely going to gain profits. The good thing is that the ICO enables you to buy them at a relatively low price. There are high chances that the value of every crypto token will increase over time. Once that happens, you are at liberty to exchange them with other currencies or assets. However, that's not the only option because you can continue owning them and instead, use them for cryptocurrency trading.

Do you feel like this is the cryptocurrency-investing opportunity that you have been waiting for all along? If your answer is a resounding yes, then you'd better grab the opportunity. iZOBi has an ICO program that closes at the end of the month. Its price is quite reasonable since one crypto token will only cost you €0.05. Besides Euros, they also accept Bitcoin, Ethereum and Binance Coin. With up to 2,400,000,000 tokens, equivalent to 2.4 billion, that's quite an opportunity.

CONCLUSION

Clearly, the iZOBi Ecosystem is changing homeowners' lives for the better. Through crypto token, it is enabling the use of cryptocurrencies to pay for house-related activities. It is also simplifying how customers find and hire handymen. The designers have identified the problem facing the current system and have gone ahead to look for solutions. It saves time, since you only need a minute to book a service provider. The absence of middlemen is also a breath of fresh air to customers and service providers. It has what it takes to change how customers pay the service providers for work done. Besides cards, one can also use a crypto token.

Last but not least, its ICO is an incredible cryptocurrency-investing opportunity. With less than a month left to benefit from it, one better hurry up and do the necessary before the time lapses. It may mark the beginning of a great crypto investor in the future.

LEDGER NANO X – THE GATEWAY TO EVERYTHING CRYPTO

Ledger Nano X – The growth & emergence of cryptocurrencies

The crypto market is forecasted to increase from \$2.3T in 2021 to \$8.5T by 2026, growing at 30% CAGR. Some of the key drivers of this growth in cryptocurrency are DLT (or distributed ledger technology) and increased investments in venture capital.

As far as consumers are concerned, cryptocurrency investing opportunities offer them faster and cheaper P2P payment options when compared to those provided by traditional money service providers, without requiring any personal details from them.

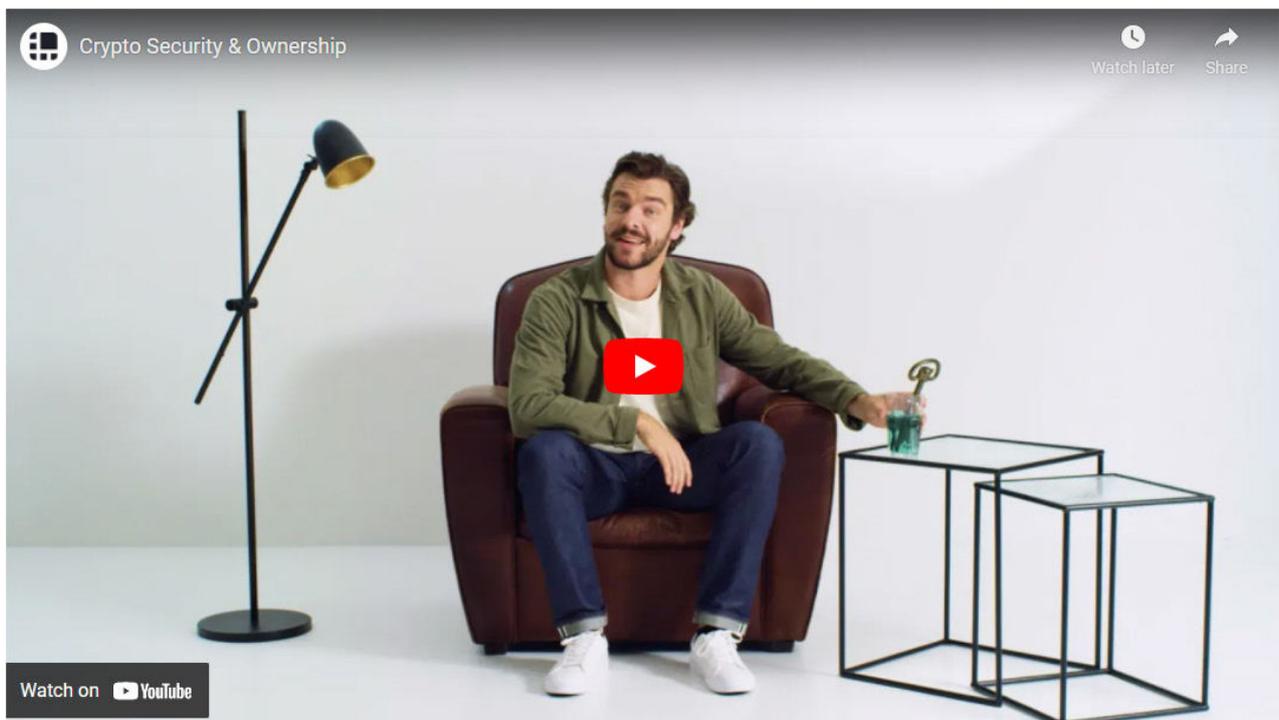

The price volatility of these digital currencies and the fact that consumers get the opportunity for speculative cryptocurrency investing are two reasons why consumers use cryptos for trading rather than buying goods and services.

On the other hand, merchants and businesses have also helped drive the growth and emergence of cryptocurrencies. With cryptos, they enjoy a low transaction fee and lower risk of volatility, thereby offering an instantaneous settlement. Cryptos also help merchants and businesses to eliminate chargebacks, which have only encouraged them to accept and pay in cryptos.

Additionally, tech developers have also contributed to the growth of the global crypto market. Many have focused on developing crypto exchanges, wallet services, as well as alternative cryptos. Others who have joined the cryptocurrency bandwagon (eventually resulting in cryptos becoming more popular) have been the millions of crypto investors globally. Cryptocurrency-investing enthusiasts are aware of the opportunities offered by these digital currencies and cryptography. As a result, they have always been optimistic about the growth of cryptocurrencies and have also been the key drivers of crypto adoption and the economy.

In this article, learn more about the Ledger Nano X wallet and what makes it the gateway to cryptocurrencies. Also, find out why hardware wallets are crucial for storing cryptocurrencies.

THE IMPORTANCE OF HARDWARE WALLETS FOR STORING CRYPTOS

When Bitcoin was first launched and was only a few years old, cryptocurrency-investing enthusiasts had little option but to pick between online crypto wallets that offered a lot of conveniences but not to secure and hardware crypto wallets, which were highly secure but slightly difficult to use. However, today, crypto hardware wallets have gained much popularity. Hardware wallets have not only matured but also offer ease of usage, ownership, and security simultaneously.

So, if you are interested in cryptocurrency investing and trading and are searching for a cold storage wallet, then hardware wallets are undoubtedly the best option.

Hardware wallets store your [private keys](#) away from the internet or any devices connected with the internet, which keeps your cryptocurrency asset safe from any cyber attack. These keys are stored on a piece of hardware, which implies that you won't lose the wallet until it is stolen or you end up misplacing it. Also, you still have the option of recovering your private keys with the help of the seed phrase. Additionally, hardware wallets are very easy to use. They store several coins as well as tokens, including ETH, Bitcoin, Litecoin, etc.

WHAT IS LEDGER NANO X?

Ledger Nano X is essentially a hardware wallet that provides users with the much-needed opportunity to start their crypto journey, while ensuring a whole new level of security. If you are fond of cryptocurrency investing and would like to trade cryptos while ensuring they remain safe, then it is best to choose a wallet, such as the Ledger Nano X. It offers the highest level of safety or protection as your private keys remain safeguarded in a certified as well as secure chip.

The chip has been designed to safeguard your wallet against sophisticated attacks. It also features a custom OS for additional protection. The Ledger hardware wallets happen to be the only wallets to come with custom OS (called BOLOS) that safeguards your funds against all kinds of malicious attacks. The wallet also offers a genuine check or an authentication process, which ensures that no one can tamper with the device or it becomes compromised by any third party.

Another benefit of using the Ledger Nano X is that it allows you to install as many as 100 apps (simultaneously installed). The wallet comes with 5-times additional storage space available for apps, compared to the Ledger Nano S wallet. All the apps that are supported by the Ledger Nano S wallet also operate on the Ledger Nano X wallet with the help of a USB cable, as well as the desktop computer.

With Ledger Nano X, you can easily manage your cryptos while on the move by connecting the hardware wallet to your smartphones using Ledger Live. Once connected, you can manage your crypto assets everywhere.

HOW IS LEDGER NANO X THE GATEWAY FOR EVERYTHING CRYPTO? WHAT SERVICES DOES IT PROVIDE?

As far as the Ledger Nano X is concerned, it comes with the Ledger Live application. This combination works together to provide users with a single solution. The Ledger Live app allows users to purchase, trade, grow, and sell their crypto assets (with our partners). Ledger hardware wallets when used in combination with the Ledger Live app, lets you store, secure as well as manage your cryptos with ease. With the app on your smartphone, you no longer need to go through an exchange since everything can be easily managed through the Ledger Live app. The app is highly secure and allows crypto users to store and manage more than 1800 cryptocurrencies easily. While the Ledger Nano secures their cryptocurrencies and transactions.

When you own cryptocurrencies, you require a safe place for storing your funds. Those who engage in cryptocurrency investing are aware that one shouldn't be storing their cryptos on any exchange. This is why hardware wallets are the best way forward!

With Ledger Nano X, users enjoy a whole new level of financial freedom, security, and convenience. Below, find some of the many advantages of the Ledger Nano X wallet.

Financial Freedom

As the owner of cryptocurrencies, you are the only person who should have access or complete control over your private keys. But you must also keep it highly secure. The Ledger Nano X wallet, in combination with the Ledger Live application, is the ideal way to securing your funds. The hardware wallet allows you to keep your private keys safeguarded under all circumstances in a secure and certified chip. No one can access the wallet apart from you.

The Ledger Live app lets you purchase, grow and exchange cryptos safely using a single app. It is this excellent combination that provides users with complete ownership.

One-Stop Destination for Cryptos

Using the Ledger Live app, cryptocurrency-investing enthusiasts can use their Ledger Nano X wallet to manage more than 1800 coins, as well as tokens directly from their desktop or smartphone. As a result, users can access multiple crypto services as and when required.

Buying and Selling Cryptos

As the owner of the Ledger Nano X wallet, users can purchase BTC, ETH, Bitcoin Cash, Stellar, USDT, Polkadot and Dogecoin directly via the Ledger Live app from Coinify. The Ledger Live app also lets users sell Bitcoins in exchange for fiat currency as and when needed.

Exchange Cryptos

The wallet also allows users to swap one cryptocurrency for another and gain value, as well as try new crypto assets. The Ledger Nano X wallet enables users to swap cryptos quickly and easily while also diversifying their crypto assets directly via Ledger Live.

Grow Crypto Assets

Another benefit of using the Ledger Nano X hardware wallet is that it allows you to easily grow your crypto assets by staking cryptocurrencies such as Cosmos, Algorand, Tron, Polkadot, and more. One can also lend cryptos to maximise their interest.

Stay in Control

With a clear and simplified interface in place, the Ledger Live app allows you to monitor your existing balance, as well as manage all the transactions. Thus, you remain in complete control every time you access your wallet.

Manage Your Actions

Users can view everything they do on the Ledger Live app on the screens of their Ledger Nano X wallet. This implies that they can control whatever is happening at any point in time and that too in a safe as well as secure manner.

Use more than 50 Compatible Wallets

For crypto assets that are not supported by the Ledger Live app, users also get the option to use a compatible external wallet to manage their cryptos. This is one of the best services offered by Ledger, especially for those keen on cryptocurrency investing.

Industry-grade Security

The Ledger Nano X is one of the certified hardware wallets available in the market today. All Ledger hardware wallets are the only and one of the first wallets certified for offering industry-grade security by ANSSI, the leading cybersecurity agency in France.

CONCLUSION

To sum up, if cryptocurrency investing is something that you have always been interested in, then having a secure and easy-to-use wallet should be your priority. Remember, crypto trading isn't just about buying and selling cryptos alone. You also require a secure digital hardware wallet, such as the Ledger Nano X wallet, to keep your funds and private keys safe. Also, the Ledger Nano X that comes along with the Ledger Live app offers the ideal solution for secure storing, as well as managing your cryptocurrencies. With the Ledger Nano X wallet, which is also one of the world's leading hardware wallets, users can trade more than 1800 cryptocurrencies while maximising their gains.
