WEEKLY CRYPTOCURRENCY MARKET ANALYSIS

Hello crypto traders welcome to this week's 109th edition of Cryptonaire Weekly. The overall cryptocurrency Market Cap stands at \$199 Billion. We have seen a \$2 Billion increase in the Market Cap since the last week. Bitcoin price currently around \$7,328 and ether price is currently at \$149. The current market cap for bitcoin is \$133 Billion and for altcoins the current market cap is \$66 Billion.

For the past two years, November has been the worst month for Bitcoin price. In 2018, Bitcoin plunged 36.93%, whereas, this year, the decline was 17.51%. However, the picture brightens at the performance of the leading cryptocurrency in the last month of the year. Since 2015, December has seen a minimum movement of 30%, which offers a great opportunity for short-term traders.

Historically, halving has proven to be bullish for Bitcoin prices. With the next halving due in May 2020, many traders are positive about the prospects of a rally in Bitcoin. However, a few influential voices in the crypto industry believe that halving will be a non-event this time. Jason Williams, co-founder at digital asset fund Morgan Creek Digital, believes that Bitcoin's price will remain unaffected during the next halving. Bitmain's CEO Jihan Wu also has a similar opinion as Williams.

While the volatility in Bitcoin is keeping the short-term traders on the hook, the long-term Hodlers remain unaffected. 64% of the total Bitcoin mined till now has not left respective wallets since 2018. This shows that the whales are confident of much higher prices in the future, hence, they are not participating in the short-term trades.

However, the volatility in Bitcoin offers an opportunity to the retail traders to grow their portfolio.

Percentage of Total Market Capitalization (Dominance)

| | |
|--------------|--------|
| Bitcoin | 66.52% |
| Ethereum | 8.13% |
| XRP | 4.77% |
| Tether | 2.07% |
| Bitcoin Cash | 1.96% |
| Litecoin | 1.47% |
| Binance Coin | 1.19% |
| EOS | 1.27% |
| Bitcoin SV | 0.91% |
| Stellar | 0.56% |
| Others | 11.15% |

TOP 10 COINS

The Hustle App is designed to reward you for participating in fitness and staying healthy. Earn bonus token rewards for helping others to stay fit & healthy through group fitness and exercise. The App includes a built in wallet and token transfer to convert HUSL Tokens to BTC, ETH or USD.

It's a TOTALLY FREE app with no memberships or fees of any kind All you need to do is participate. Multiple smart watch platforms are available.

The App can connect you with like-minded people. This inspires motivation through group fitness and support. You also have the option to be connected with professional trainers, professional athletes and healthy food providers to assist you with your training & diet in order to attain your goals.

And connections to major shoe brands & world-leading fitness companies providing you the option to use the HUSL token or other modes of switched currencies to purchase products at a reduced price.

CRYPTO TRADE OPPORTUNITIES

BITCOIN - BTC/USD

The pullback in Bitcoin, from the lows of \$6,526, hit a roadblock at the 20-day EMA. This indicates a lack of demand at higher levels. However, we like that the drop from the 20-day EMA has been gradual. This is a positive sign as it shows that the selling pressure has reduced.

If the cryptocurrency can bounce off the current levels or from the support line, it will indicate accumulation on dips. The first sign of strength will be a break above the recent highs of \$7,870.10. Above this level, a move to the resistance line is likely. We anticipate a new uptrend to start if the price sustains above the resistance line. We might suggest a long position on a breakout of \$7,900.

Our bullish view will be invalidated if the bears succeed in plunging the price below the recent low of \$6,526. Below this level, the decline can extend to the next support at \$5,600.

ETHEREUM - ETH/USD

COINBASE:ETHUSD, 1D 148.91 ▼ -0.06 (-0.04%) O:148.83 H:150.00 L:148.16 C:148.91

The relief rally in Ether stalled at \$157.73. The shallow pullback shows a lack of confidence among the bulls that a bottom is in place. With the 20-day EMA sloping down and the RSI in the negative territory, the advantage is with the bears.

If the bears can drag the price below the recent low of \$131.80, the downtrend will resume. The next support on the downside is \$120.

However, we anticipate the bulls to aggressively defend the \$140-\$131.80 support zone. If the bulls can carry the price above the previous support turned resistance of \$163.57, it will indicate that the markets have rejected the lower levels. Such a move will increase the possibility of a move to \$200. Therefore, we will watch the price action for the next few days and suggest a trade if the price sustains above \$163.57.

☎ +237 655 88 84 68

RIPPLE - XRP/USD

XRP has been trading between \$0.21262 and \$0.2365 for the past few days. Acceptance of the price below the previous strong support at \$0.2365 is a bearish sign. The downsloping 20-day EMA and the RSI close to oversold levels suggests that the bears are in command.

If the digital currency slips below the recent low of \$0.20256, the downtrend will resume. A fall to a new yearly low will be a huge negative. The next support on the downside is \$0.17.

However, if the current consolidation resolves to the upside, it will indicate demand at lower levels. If the price sustains above \$0.2365, a move to the 50-day SMA and above it to \$0.31533 is possible. We will suggest long positions after the price sustains above \$0.2365.

Bank of Hodlers

BITCOIN CASH - BCH/USD

COINBASE:BCHUSD, 1D 213.42 ▼ -0.59 (-0.28%) O:214.00 H:216.19 L:212.29 C:213.42

The rebound from the critical support at \$201.66 could not break out of the 20-day EMA. This suggests that the traders are closing their long positions on minor rallies. The 20-day EMA is sloping down and the RSI is in the negative territory, which suggests that bears have the upper hand.

The bears will now try to break below \$201.66 to \$192.10 support zone. If successful, the downtrend will resume. The next target on the downside is \$166.98.

However, if the bulls defend the support zone, the price might remain range-bound for a few days. The altcoin will pick up momentum on a break above the moving averages. We will wait for the price to sustain above the 20-day EMA before turning positive.

Take control of your automated crypto trading strategies

LITECOIN - LTC/USD

COINBASE:LTCUSD, 1D 45.51 ▼ -0.06 (-0.13%) O:45.55 H:46.20 L:45.25 C:45.51

The bulls have not been able to push Litecoin above the \$50.25 to \$47.22 resistance zone in the past week. This is a negative sign as it shows that the bulls are not buying aggressively even at these levels because they are not confident that a bottom is in place.

The downsloping moving averages and the RSI in the negative zone indicate that bears are in command. The price can retest the recent low of \$42.16. If this support cracks, the downtrend will resume. The next support on the downside is way lower at \$30.

Conversely, if the altcoin bounces off the current levels or from \$42.16 and breaks out of \$50.25, it will indicate accumulation at lower levels. We will wait for the price to sustain above \$50.25 before turning positive.

ADVANCEMENTS IN THE CRYPTOCURRENCY WORLD

Financial Giant SoftBank Breaks Into Crypto Payments, Launches New Bank Card With 10,000 Stores on Board

Tokyo-based SoftBank, a multinational conglomerate holding company, is introducing its own SBC wallet card, “Softbank Card 3.0,” which works like a traditional debit card and has a built-in cryptocurrency wallet.

According to the announcement, the card has been created through a partnership with wallet card development firm Dynamics. SBC wallet cards aim to provide improved security and better accessibility when compared to traditional wallets. The cards have their own encryption system and can perform both hot and cold wallet functions.

The cards are supported by an app that comes with the “legal currency storage function, credit card function and electronic payment service.” These features eliminate the time required for block confirmations when performing digital currency transactions.

“In the version of Softbank Card 3.0, the Wi-Fi function, the fiat and digital currency switching buttons, and the information display screen are integrated. In the Wi-Fi module, the SBC implements a hot wallet when the Wi-Fi function is turned on, and a cold wallet when the Wi-Fi is turned off.”

Bitfinex becomes the first exchange to support the Lightning Network

Bitfinex, a Hong Kong-based cryptocurrency exchange, announced support for Lightning Network deposits and withdrawals becoming the first exchange in the industry to do so.

Bitfinex adds support for the Lightning Network

The Lightning Network is a second layer solution to Bitcoin's scalability problem. It was created by Lightning Labs, a San Francisco-based company building the next generation of decentralized financial infrastructure.

The idea behind it was to increase the transaction throughput of BTC's blockchain network. This open-source protocol enables instant payments at exceptionally low fees with millions to billions of transactions per second, and cross-chain atomic swaps.

Starting on Dec. 3, Bitfinex will add support for Lightning Network deposits and withdrawals. The new feature would be offered to all users who would begin to enjoy faster and cheaper transactions. And, those running their own Lightning Node would also be able to connect with Bitfinex's Lightning Node.

Germany to Let Banks Sell and Store Crypto, Laws Changing in Asia

Some major regulatory developments in the crypto space have transpired this week. Not only has Germany passed a bill allowing banks to sell and store cryptocurrencies, but South Korea and Thailand are also amending their laws to better regulate the crypto industry. We also cover crypto news involving the governments of China, Japan, and the U.S., including the arrest of an Ethereum Foundation member.

German Bill Authorizes Banks to Deal in Crypto

A bill has reportedly been passed in Germany allowing banks to sell and store cryptocurrencies for customers. Starting in 2020, financial institutions in Germany will be able to offer cryptocurrencies, including bitcoin, alongside traditional investments such as stocks and bonds. They can also provide crypto custody services to customers. The bill proposes eliminating the requirement for banks to use third-party custodians to manage cryptocurrencies. Banks are currently required to use “external custodians or special subsidiaries” to store cryptocurrencies. They will need to procure a license to offer crypto services.

VeChain (VET) Jumps a Whooping 26%, Thanks to an Iconic Retro Game Remake

While the rest of the market continues to torment investors, one cryptocurrency is covering some significant ground. VeChain (VET) is up 26% today and showing no signs of slowing down, but what's driving the token?

Impressively, the token is back to price highs not seen since May this year.

It seems a trifecta of partnerships, progress, and listings still make the biggest difference in this market. There has been no lack of the aforementioned for VeChain of late, citing several bullish coalitions, all of which look to drive the project further.

A Retro Collab with Microsoft

By far, the biggest propellents thrusting VeChain moonward – is the project's recent collab with Microsoft on a re-release of the 1980's gamebook: "The Way of the Tiger."

Bringing together Microsoft, major game developer, Eidos, gamebook creator, fabled Lands, and, of course, VeChain, The Way of the Tiger, stands as a retro collaboration for the modern age.

The specific use of VeChain Thor enables the ability to create non-fungible tokens (NFT). These NFTs are unique tokens stored and transferred via the blockchain. They are most commonly used as blockchain game items (think CryptoKitties) and – thanks to their inimitability – can end up fetching exorbitant prices.

Binance Acquires Beijing-Based Blockchain Data Startup DappReview

Binance has acquired DappReview, an evaluation platform that offers data-driven research and advertising services to blockchain-based decentralized applications (dapps).

The acquisition of Beijing-based DappReview will help the world's leading exchange by volume to further develop its existing dapps and create new blockchain use cases, said Viktor Radchenko, founder at Binance's Trust Wallet.

"In the near future, Trust Wallet will integrate DappReview APIs to provide easy access to explore new dapps and crypto games, as well as more insight into DeFi [decentralized finance] services, analytics and usage," Radchenko said in an interview.

In return, Binance will offer support for DappReview in non-technical fields, including marketing and business development while the platform maintains its independence in technical development and operations, according to a statement from Binance.

"By working with Binance X [the company's developer network] and Launchpad, DappReview will bring in more talented Dapp developers and assist promising Dapp projects on fund-raising," Vincent Niu, founder of DappReview, said of the deal. "A lot more exciting synergies with Trust Wallet, Binance Research, etc."

Africa 'Will Define' the Future of Bitcoin — Twitter CEO Jack Dorsey

Bitcoin (BTC) will see its future “defined” by Africa, one of its best-known proponents has predicted after completing a tour of the continent.

In a tweet on Nov. 27, Twitter and Square CEO Jack Dorsey said that he would return to Africa in 2020 after spending time traveling in Nigeria and Ghana this month.

Dorsey highlights Africa’s Bitcoin potential

“Africa will define the future (especially the bitcoin one!),” he commented, revealing he planned to spend up to six months on the continent next year.

During his stint in Nigeria, Dorsey attended a Bitcoin meetup, continuing his personal advocacy of the cryptocurrency.

The tech mogul has become famous for his Bitcoin support, having pledged to integrate its functionality into both Twitter and Square. He has also publicly endorsed the Lightning Network as a payment solution, something which allows Bitcoin users to send funds instantly for next to no fee.

Blockchain In Retail Market Expected To Grow By 60% Through Next Five Years

As blockchain technology reaches countries around the world, retailers are starting to take note as well. Considering this interest, an analyst group called Research & Markets has recently released their report on the trends of blockchain around the world, covering the next five years. According to this data, the compound annual growth rate (CAGR) of the retail industry's use of blockchain technology will reach 60.4% from now until 2024.

Much of the discussions on this matter are predicted to involve solutions using smart contracts, when it comes to adopting blockchain technology. Billing, supply chain management, and inventory management are expected to be automated with the use of smart contracts, along with other internal business operations.

By using smart contracts for the automation of payment processors, companies are able to save money as they eliminate the gateway operators that ordinary charge massive fees for these transactions. The use of smart contracts also allows companies to spend less time and money on auditing and accounting.

The report states that Asia will continue its role as a major player in the retail industry, as it hosts multiple startups for e-commerce. Australia also stands to be a solid competitor, as Research & Markets draws attention to a new pop-up store by Alibaba. This store is presently backed with blockchain transactions.

Largest Indian State to Pilot Blockchain-Based Solar Energy Trading

The Indian state of Uttar Pradesh (UP) will pilot a peer-to-peer (P2P) solar power trading project in partnership with Australian blockchain energy company Power Ledger.

The state power utility UP Power Corporation Limited and UP New and Renewable Energy Development Agency have partnered with Power Ledger to launch a trial of P2P solar energy trading to examine its practicability, according to a Nov. 28 press release. The first phase of the project is set to be completed by March 2020.

During the trial, Power Ledger will integrate its blockchain-based platform with smart meter systems to enable residents with rooftop solar infrastructure to set prices, track energy trading and settle surplus solar energy transactions via smart contracts.

One of the main problems facing renewable energy sources is storing surplus energy when unpredictable elements like wind and sun create more or less power than is needed. As such, the project aims to make it easier for small producers to find users for surplus energy and make renewable sources more viable.

Once the pilot is completed, Power Ledger will examine the results and purportedly work with the local government to tailor regulations that further enable P2P energy trading.

Vitalik Buterin Supports Petition to Free Ethereum Researcher Arrested at LAX After Trip to North Korea

Virgil Griffith, the American programmer who traveled to North Korea and was later arrested at Los Angeles International Airport on Thursday, has ignited a fierce debate regarding his actions.

According to a criminal complaint released by the US, Griffith, an Ethereum researcher who spoke at a blockchain conference in Pyongyang, is accused of assisting North Korea in evading sanctions imposed by the US government. The charge carries a penalty of 20 years in prison.

While Griffith traveled to North Korea without a special validation from the US government, as required, Ethereum co-founder Vitalik Buterin believes the programmer spoke at the conference in order to bridge a divide.

In a tweetstorm on Sunday, Buterin tells his 882,000 followers that he supports Griffith. In response to a blog post entitled, “Let’s start a petition to free Virgil Griffith” penned by Enrico Talin, the founder of blockchain platform Commerc.io, the Ethereum co-creator says he’s prepared to sign a petition to set Griffith free.

Waves DEX Shuts Down and Relaunches as Hybrid Cryptocurrency Exchange

Decentralized exchange (DEX) Waves DEX shut down to resume operations as a hybrid exchange, Waves announced in a press release shared with Cointelegraph on Dec. 2.

Per the release, the exchange has already ceased operations on the old domain and the process of moving its activities to Waves.Exchange has already started. The company announced:

“From this point onwards, the old version of the exchange will be unavailable, and the website will offer only functionality to support migration. User funds held on Waves DEX will remain completely safe during and after the process.”

The hybrid exchange was already partially activated before the migration began earlier today and it expects to become fully operational before tomorrow. The company claims that the new trading platform combines the irreversibility of transactions, safety and user control of funds of decentralized exchanges with the features of centralized trading platforms.

TOP 5 WAYS TO EARN PASSIVE INCOME WITH CRYPTOCURRENCY

Hi Platinum Crypto Followers,

Firstly I wanted to spend a moment thanking all the subscribers and followers for all the positive messages we received about the my previous article '[INVESTING IN BITCOIN – THE PROS AND THE CONS](#)' I really hope this helped all the newcomers to the industry as well as the more seasoned hodlers.

Secondly well the markets have certainly seen some action this week with the early parts of the week showin major bullish momentum. Most of the major cap coins have seen some quality gains and the overall market cap has risen from the low 200B mark to \$220+ Billion. Market sentiment is still on the caucious side but lets see how the remainder of the week unfolds.

POPULARITY OF CRYPTOCURRENCIES

The popularity of cryptocurrencies in the different sectors of the economy has grown massively. Its growth comes despite the doubt revolving around its adoption. As part of the ways to use cryptocurrencies that are making it popular, is its ability to create an income. Yes, you heard right. While you can settle bills using cryptocurrencies, you also have the choice of making a passive income.

Earning a passive income with cryptocurrency is not just for people with knowledge on how it works or for people who own digital cash. Below, we will identify how to make money with digital currency as well as identify the best digital currencies for passive income.

HOW CAN YOU MAKE MONEY WITH CRYPTOCURRENCIES?

You will be glad to know that you can make money with cryptocurrencies online, even with no experience. If you are interested in knowing how to make money with cryptocurrency, well here is your chance. We will highlight the different ways you can earn money via this channel.

Buy and hold

When listening to investment advice on making money via cryptocurrency, buying, and holding is the most common method you will hear. You will buy currency then wait until it increases its value before selling it. You will then cash out when the prices are higher than your buying price. This process is similar to that of investing in stocks/shares.

Buy and hold for dividends

The above method will make you money by selling your crypto at a higher price than your buying price. However, buying and holding for dividends will pay you by for holding them. In this case, you do not own the cryptocurrency. Instead, your role is to keep it in circulation. Some coins that you can consider under this method include but are not limited to NEO and KuCoin.

Mining

Mining cryptocurrency is an excellent way of earning passive income with cryptocurrency. You will need to invest in the necessary equipment, set it up, and allow it to operate. This method works by having your computer solve complex mathematical concerns, and after solving the problem, you are rewarded with digital currency.

Staking cryptocurrencies

This method is a combination of holding and selling and holding and selling for dividends. This advantage is dependent on the currency you buy. For coins such as neblio, you can buy it and hold it to sell when the time is right while at the same time receiving dividends from holding it. You will be killing two birds with one stone.

Day trading

Day trading is a more advanced method, and it may not be everyone's cup of tea. It refers to identifying patterns in financial trading charts daily. Making money through this method is possible only if you are keen on following the market trends. You can buy and sell cryptocurrency by the hour. For example, you can buy bitcoin, litecoin, or any other cryptocurrency and sell an hour later when the prices increase. However, this can only happen if you are precise, knowledgeable, and fast. You will be able track trading volume and gather sufficient data to make the right decisions.

WHAT ARE PASSIVE WAYS OF EARNING CRYPTO?

As indicated, there are different ways of making money with cryptocurrencies and, more specifically, earning a passive income.

Staking cryptocurrencies

Staking coins is another simple way of earning passive income with cryptocurrency. For it to work, you will need to follow a proof of stake consensus mechanism. Also, put your coins in an open wallet over a period of time that will eventually generate new similar coins.

For example, you can consider Neblio, proof of stake cryptocurrency. By holding, let us say 20 of these coins, you can total the number to 23. The additional coins act as staking rewards, thus the source of income.

Holding Dividend-paying exchange coins

Dividends from a financial perspective do not require you to sell any product. With cryptocurrencies, all you have to do is identify the digital currencies that pay dividends regularly. Rather than sell, you can hold cryptocurrencies and receive dividends that will add value to what you are holding. This mode of passive income from cryptocurrency requires research on which coins are worth the buying and holding in terms of earning interest. Some key players in the market include BTMX, KuCoin, as well as TenX.

Run a Masternode

Masternodes on Proof of Work or Proof of Stake cryptocurrencies add to ways of making money from crypto by holding them. Masternode refers to a cryptocurrency full node or a computer wallet that plays the role of keeping the full copy of the blockchain in real time. In addition, running a masternode will help to perform specific tasks, which will earn you rewards.

The mentioned tasks may include partaking in instant transactions, increasing the privacy of the transactions, or getting involved in governing and voting. However, every currency comes with a limit on the minimum coin holdings to run a masternode. For example, you will need 1000 DASH units to run a masternode. Also, there will be a variance in the hardware required to run the different nodes.

BEST WAYS OF EARNING PASSIVE INCOME WITH CRYPTO

**THESE METHODS ARE GENUINE
AND ACTUALLY WORK!**

THESE 6 METHODS ARE TRIALLED AND TESTED

We at Go Cryptowise have researched the best ways of earning passive income from cryptocurrencies in 2019.

1 LENDING

If you have some cryptocurrencies you could lend them out to others and earn interest. Two great options of income from lending is BlockFi and ETHLEND

2 MARGIN FUNDING

With margin funding you fund your cryptos out for margin traders to use when opening long or short positions while margin trading

3 STAKING

With PoS you 'stake' your coins in a wallet. With added 'cold staking' feature it easier than ever. One of our favourite ways of earning passive income from crypto.

4 MASTERNODES

A Masternode is a full node that secures the blockchain network. When running a Masternode you earn a higher amount of coins than traditional non-node staking.

5 BRAVE BROWSER

With the Brave Browser you earn BAT for browsing ads on the web. With over 500 million people use ad blocking softwares.

6 BRAVE PUBLISHER

You can also income as a published on the Brave browser If you today run a website, Youtube or Twitch channel then you can earn BAT if users visit your site/channel

HOW CRYPTO DIVIDENDS ARE THE FUTURE OF PASSIVE INCOME

The crypto world is embracing the different modes of making an income via digital currency. However, looking at where the community is leaning towards, it is safe to say that crypto dividends may be the future of a passive income with cryptocurrency.

Earning interest/dividends on a regular is an excellent way of generating an income. With a majority buying cryptocurrency and retaining them in the long-term, thus, reducing trading fees, earning through dividends is a better alternative. Keeping in mind that cryptocurrency comes with a volatile trait on its prices; dividends will give an income source as you await a significant price increase.

WHAT ARE THE FIVE BEST CRYPTOCURRENCIES FOR PASSIVE INCOME?

As the popularity of crypto increases, many are embracing the technology behind it, blockchain. Others are also seeking alternative ways to make some extra income through cryptocurrency. It is not just about randomly picking a digital currency. You should lean towards a reliable and popular asset.

Some of the best cryptocurrency earners for a passive income currently include NEO, VeChain, Waves, Dash, and DCR.

NEO is unique due to its indivisibility, whereby you cannot subdivide one coin. It also has a “fuel” model used in the form of GAS tokens. NEO holders receive 7 GAS automatically every time the next block is found.

VeChain provides two types of coins, namely VET and THOR. VET token holders will receive THOR tokens from staking. There is no minimum of staking, making it affordable for right about any investor to join in.

WAVES is using a leased Proof of Stake algorithm allowing investors to rent their balance for full nodes. By renting WAVES, the contractors will be able to pay a percentage as a reward to the owner. You can also participate in the mining process, but you must own a minimum of 1000 WAVES.

DASH does not use the Proof of Stake algorithm, but it employs a masternode system. With DASH, token owners can receive dividends. To receive these dividends, you must own a masternode with 1000 DASH coins in your wallet. Annual earning interest is estimated between 7.5 and 8.4%.

Decred (DCR) allows users to receive passive income with cryptocurrency by purchasing “tickets.” These tickets allow investors to vote on significant issues on the Decred network. Also, by holding a given number of coins in their wallets, the users will receive a 30% block mining reward.
