Weekly Cryptocurrency Market Analysis

The cryptocurrency market bounced back last week, with the overall market increasing by 9.7% to \$326 billion.

Bitcoin rose this week by 14% to \$8,500 while Ether's price increased 9% to \$520. The current market capitalization for Bitcoin is \$142,000,000,000 and other altcoins is \$184,000,000,000.

We saw that the demand increased last week when the cryptocurrency market dropped around 14% within 24 hours and there afterwards a lot of buying took place with high volume. Crypto traders have jumped in seeing this buying opportunity.

First conclusions of the G20 meeting for the purposes of the Cryptocurrency scenario, in case you are interested in:

Australia = Legal

Brazil = Legal

Canada = Legal

China = Temporarily prohibited (illegal)

France = Legal

Germany = Legal

India = Neutral

Indonesia = Neutral

Italy = Legal

Japan = Legal

Mexico = Restricted

Russia = Restricted (previously illegal until the recent unlocking of 40 encryption sites)

In the last few days, we started seeing selective coins/tokens break out, meaning that some investors are willing to put money back into the market.

The G20 Financial Stability Board hasn't seen the danger in cryptocurrencies and has rejected the appeals of several countries urging them to regulate, as cryptocurrencies do not pose a risk to global financial stability. Admit it, after this news everyone expected, even if in their dreams, BTC to go to 12-15k? As a result - more than +\$1k was added to the price of Bitcoin, and the market briefly turned green.

Saudi Arabia = Restricted

South Africa = Legal

South Korea = Restricted (Regulatory action previously legal but pending)

Turkey = Legal

UK = Legal

US = Legal

Countries invited for the 2018 G20 meeting

Chile = Legal

Jamaica = Neutral

The Netherlands = Legal

Rwanda = Neutral

Senegal = Neutral

What's more, Japan went to war on the Binance cryptoexchange. Regulators are angry, Binance retreated from Hong Kong to Malta, as a result, Bitcoin fell below \$9000. Manipulators? And yes, the Maltese government invited CEO Binance as an expert to discuss the bill, which is designed to create favorable conditions for the development of cryptoindustry in this country. Which, by the way, is also very good.

Curious news came from the UK, in short, a 15-year-old teenager Salim Rashid said that he has written a code that gives detour access to the Ledger Nano S hardware cryptowallet that is used by millions of people around the world.

Having been informed about the vulnerability, Ledger said it released a fix for the security system of Nano S. But there is a problem: some believe that this vulnerability affects another model of the wallet - Nano Blue - and its correction will not appear in a few weeks.

Spring. We are looking forward and believe in the growth of everything and every coin, because the audience must watch the show, grinning. You don't have to be very smart for this - it's enough to have wild imagination.

Advancements in the Cryptocurrency World

Two Australian State Politicians Reveal Bitcoin Holdings

<https://news.bitcoin.com/two-australian-state-politicians-reveal-bitcoin-holdings/>

The updating of the register of Queensland's politicians' interests has revealed that two of the state's representatives currently own bitcoin. The register discloses the formal political affiliations of the state's politicians, in addition to revealing major assets and investments owned by Queensland's representatives.

Trump Prohibits U.S. Purchases of Venezuelan Cryptocurrency

<https://www.bloomberg.com/news/articles/2018-03-19/trump-prohibits-u-s-purchases-of-venezuelan-cryptocurrency>

President Donald Trump banned U.S. purchases of a cryptocurrency the Venezuelan government is rolling out, as part of a campaign to pressure the government of President Nicolas Maduro. Trump issued an order on Monday prohibiting U.S. citizens from engaging in transactions using the oil-backed currency, called the Petro. He authorized Treasury Secretary Steven Mnuchin to issue any necessary regulations to enforce his order. Maduro created the currency to try to salvage his country's failing economy, where inflation is estimated to spiral to 13,000 percent this year.

Binance, The World's Biggest Cryptocurrency Exchange, Is Heading to Malta

<https://www.bloomberg.com/news/articles/2018-03-23/the-world-s-biggest-cryptocurrency-exchange-is-moving-to-malta>

Binance, the world's largest cryptocurrency exchange by traded value, is seeking a fresh start in the Mediterranean. The company, founded last year in Hong Kong, is planning to open an office in Malta, Chief Executive Officer Zhao Changpeng said in an interview. Binance will soon start a "fiat-to-crypto exchange" on the European island nation, and is close to securing a deal with local banks that can provide access to deposits and withdrawals, he said, without providing a timeframe.

G20 leaders to hold fire on cryptocurrencies amid discord

<https://www.reuters.com/article/us-g20-argentina-bitcoin/g20-leaders-to-hold-fire-on-cryptocurrencies-amid-discord-sources-idUSKBN1GV2QR>

The world's financial leaders gathering in Argentina on Monday are likely to stop short of any specific action aimed at regulating cryptocurrencies such as Bitcoin, amid discord over the approach, sources at the summit told Reuters. Finance ministers and central bankers from the world's 20 largest economies meeting in Buenos Aires will be told on Tuesday that such "crypto assets" do not threaten financial stability but can serve to launder money or finance terrorism and hurt consumers who buy them.

Twitter and Square's Jack Dorsey: Bitcoin Will Be World's Single Currency

<https://bitcoinmagazine.com/articles/twitter-and-squares-jack-dorsey-bitcoin-will-be-worlds-single-currency/>

Twitter and Square CEO Jack Dorsey recently had some remarkably positive remarks about bitcoin. Predicting the future of finance, he suggested that the “father of cryptocurrencies” is likely to become the world’s only currency within the next 10 years. Dorsey stated: The world ultimately will have a single currency. The internet will have a single currency. I personally believe that it will be bitcoin. Dorsey’s optimism comes at a time when bitcoin and virtual money have been deemed “not that significant” by varying regulators. During Argentina’s recent G20 summit, several panel members stated their belief that it was not necessary to globally regulate cryptocurrencies just yet.

Governor of the Bank of England: Cryptocurrencies Do Not Pose Serious Risks

<https://bitcoinmagazine.com/articles/mark-carney-cryptocurrencies-do-not-pose-serious-risks>

When it comes to bitcoin and cryptocurrencies, Mark Carney, governor of the Bank of England and chairman of the Financial Stability Board (FSB), is known for being a harsh critic. Though Carney has praised the technology behind cryptocurrency in the past, he has often referred to digital money as a “bubble,” claiming it has failed users and is “no substitute for cash” or credit cards. Just days ago, Carney proclaimed that illicit activities surrounding cryptocurrencies were causes for major concern, citing everything from personal wallet thefts to terrorist funding, only now, it appears his sentiment has suddenly changed.

Satoshi's Vision 2018 Conference Report: Bolstering the Future of Adoption

<https://news.bitcoin.com/satoshis-vision-2018-bolstering-the-future-of-bitcoin-cash-adoption/>

This weekend many bitcoin cash supporters gathered in Japan for the Bitcoin Unlimited event, Satoshi's Vision Conference. The three-day conference was filled with synergy as the event was the largest bitcoin-centric conference to-date in Tokyo. Over the last three days, an event was held in Tokyo Japan aiming to bolster the adoption growth of bitcoin cash (BCH) and on-chain scaling called Satoshi's Vision Conference (SVC). The event was hosted by the Master of Ceremonies Taariq Lewis, the founder of Aquila, and saw many special guests including Bitcoin Unlimited's Peter Rizun and Andrew Stone, Bitcoin ABC's Amaury Sechet, Nchain's Craig Wright, the Satoshi Nakamoto Institute's Daniel Krawisz, Centbee's Lorien Gamaroff, and many more bitcoin cash evangelists.

NYC hotel hopes to launch \$400 million-coin offering

<https://www.cnn.com/2018/03/19/kevin-oleary-new-york-city-hotel-hopes-to-launch-400-million-dollar-coin-offering.html>

Kevin O'Leary told CNBC on Monday he's working on a deal to allow a "very prestigious brand hotel" in New York sell ownership in the company through a \$400 million cryptocurrency offering instead of a stock IPO. "There's a big deal coming in New York in the next three weeks," said the "Shark Tank" investor and chairman of the ETF firm O'Shares Investments. "It's a \$400 million coin issuance for a real asset you've heard of." However, O'Leary said he could not reveal the name of the hotel yet because of a nondisclosure agreement.

Bug Caught That Allowed Coinbase Users to Garner Unlimited Amounts of Ether

<https://bitcoinmagazine.com/articles/bug-caught-allowed-coinbase-users-garner-unlimited-amounts-ether/>

On March 20, 2018, it was revealed that a bug hidden in Coinbase's Ethereum smart contract setup could have given users access to unlimited amounts of ether. At press time, it does not appear as though the vulnerability was ever exploited or even noticed by users. The issue was first discovered last December by VI Company, a Dutch firm that specializes in fintech. The company was planning to give its employees ether bonuses in celebration of the upcoming holiday season when researchers noticed the issue with their "ETH receiving code" while garnering funds from a contract. They saw that by using a smart contract, a series of digital wallets could be "tricked" into recording ether transfers and purchases that had never actually happened.

Venezuelans to Buy Homes and Property with State Cryptocurrency

<https://news.bitcoin.com/venezuelans-to-buy-homes-and-property-with-state-cryptocurrency/>

Venezuelans will be able to buy houses and other property with their new national cryptocurrency. Real estate deals in petro will be authorized in April, President Maduro announced. The government will also finance the construction of 230,000 new homes using funds from the pre-sale of the oil-backed crypto. All citizens and legal entities in Venezuela can now buy the national cryptocurrency through its website and soon they will be able to spend their petros as well. Sales of real estate in the oil-backed crypto will be allowed from April 20.

Platinum ICO Information

DATARIUS

As a P2P platform, the system enables users to decide themselves whether to use any of variable services and applications. This in turn allows almost a complete reduction in transaction costs. Datarius serves as a direct link between lenders, borrowers, and the related services – managers, analysts, insurance companies, funds, trading terminals.

Project Details:

Fintech company iCrypto S.A., developing Datarius Cryptobank, is at the forefront of the new digital economy. The Datarius project is a new, social-type cryptobank with transparent conditions. In the cryptobanking industry, Datarius will become the first financial institution capable of offering its customers a full range of financial services implemented within a decentralized system.

The uniqueness of Datarius Cryptobank is that the project allows customers to get services, adapted to their needs. Datarius will operate on the basis of a P2P ecosystem (peer-to-peer), where transaction participants are private users, and not banking institutions. This is not a novelty in the financial market, but a system offered by Datarius which has inherited the best traits from traditional banking products, adapting them to the principles of decentralized system operation. Such a platform will be a perfect solution for people without a credit history, to whom traditional banks cannot provide loan proposals, or for whom current offers on the market will cost much more.

The Datarius project has a global value. It is designed to overcome current difficulties connected to the use of cryptocurrencies in the non-digital world, introducing options of integrated crypto and fiat money services into payment infrastructure for this purpose.

The primary mission of Datarius cryptobank is the creation of a P2P-system that would make use of the full potential of decentralized financial technology within the framework of a cryptocurrency payment system and real life.

Another substantial part of Datarius' mission is to provide the world community with access to major financial instruments in a P2P transaction format. In a relatively short time cryptobank clients will receive services that ultimately meet their needs, because transactions will be conducted in an automatic mode, while services will be customizable. Any transaction will be much more profitable since a P2P-platform does not split loan and deposit products and does not involve staff dealing with this.

Unlike most developers who continue promoting monopolization of the world financial market by large players, the Datarius team aims to create a perfect financial institution that would adopt all the advantages of traditional financial organizations, leaving behind their major disadvantages:

non-transparency, unpredictability, lobbying, and administrative burden. Datarius' model represents a decentralized system in exceptional and a most complete format. It includes blockchain technologies that ensure secure information recording and storage. This excludes the possibility of changing or falsifying any piece of data.

Usage of cryptocurrencies, which do not require central control, as well as smart contracts allows them to process transactions more efficiently and safely compared to conventional deals. Datarius is a decentralized and partially closed system which sometimes excludes bank participation that makes it possible for users to gain profits.

The system allows users to make their own decision when judging the appropriateness of certain services and applications, which minimizes the cost of processing transactions. The customer selects a service according to his/her own requirements and pays the price without a customer service charge.

ORIGIN PROTOCOL

The sharing economy without intermediaries. They empower developers and businesses to build decentralized marketplaces on the blockchain.

Project Details:

Origin is a sharing economy marketplace and set of protocols that enables buyers and sellers of fractional use goods and services (car-sharing, service-based tasks, home-sharing, etc.) to transact on the distributed, open web. Using the Ethereum blockchain and Interplanetary File System (IPFS), the platform and community are decentralized, allowing for the creation and booking of services and goods without traditional intermediaries.

They are specifically building a large-scale commerce network that:

Transfers direct financial value (listing, transaction, and service fees) from large corporations like Airbnb, Craigslist, Postmates, etc. to individual buyers and sellers

Transfers indirect financial and strategic value (privately aggregated silos of customer and transaction data) from those same corporations to the entire ecosystem

Creates new financial value for marketplace participants that contribute to the growth of the network (e.g. building new technology for the Origin network, bootstrapping new product verticals, and referring new users and businesses)

Is built on an open, distributed, and shared data layer to promote transparency and collaboration

Immediately allows buyers and sellers across the world to do business with each other without difficult currency conversions or tariffs

Promotes personal liberty by not allowing a central corporation or government to impose arbitrary and oftentimes onerous rules on how to do business

To accomplish these ambitious goals, the Origin platform is being launched with incentives from the outset to encourage other technologists, businesses, and consumers to build, contribute, and extend the ecosystem with them. They imagine a broad collection of vertical use cases (e.g short-term vacation rentals, freelance software engineering, tutoring for hire) that are built on top of Origin standards and shared data. Together, they will create the Internet economy of tomorrow.
