EDITORS

Without a major trigger, Bitcoin prices have been range-bound in 2022. While long-term investors seem to be accumulating on dips, the short-term traders who have purchased at higher levels may be liquidating their positions on rallies near \$47,000 to “get their initial investment back,” said Brett Munster at Blockforce Capital.

During this period of uncertainty and high inflation, Tesla CEO Elon Musk advised his followers to “own physical things like a home or stock in companies you think make good products, than dollars when inflation is high.” Musk added that he owns Bitcoin, Ethereum and Dogecoin and does not plan to sell his crypto holdings.

Although a Bitcoin rally to \$100,000 seems like a distant dream at current levels, several investors remain bullish for the long term. Apple co-founder Steve Wozniak while speaking on the podcast “Steve-O’s Wild Ride,” said he expects Bitcoin to reach \$100,000 due to the high interest in crypto.

LETTER

Bitcoin has formed a descending triangle pattern which will complete on a break and close below \$37,020. The BTC/USD pair could then decline to the strong support zone of \$34,322 and \$32,933.

Contrary to this assumption, if the price rebounds off \$37,020, it will suggest that bulls are accumulating near this support. The buyers will then attempt to push and sustain the price above the downtrend line and the 50-day simple moving average (SMA).

Such a move will invalidate the bearish setup, which could attract buyers. The pair could then start its northward march toward the overhead resistance at \$45,500 where the bears are expected to mount a strong defence.

The flat moving averages and the relative strength index (RSI) near 47 point to a possible range-bound action in the short term.

Traders may wait for the price to break and close above the 50-day SMA before turning positive. Bottom fishing may be avoided if the price sustains below \$37,000.

Lastly please check out the advancement’s happening in the cryptocurrency world.

Enjoy the issue!

WEEKLY CRYPTOCURRENCY MARKET ANALYSIS

Hello, welcome to this week's 225th edition of Cryptonaire Weekly Magazine. The global crypto market cap is \$1.73 Trillion, up \$10 billion since the last week. The total crypto market trading volume over the last 24 hours has increased by 9.85% to \$72.84 Billion. The DeFi volume is \$12.45 Billion, 17.10% of the entire crypto market's 24-hour trading volume. The volume of all stable coins is \$61.60 Billion, 84.56% of the total crypto market's 24-hour trading volume.

Bitcoin's price has increased 0.65% from \$38,550 last week to around \$38,800 and Ether's price has decreased 0.2% from \$2,550 last week to \$2,545. Bitcoin's market cap is \$736 Billion and the altcoin market cap is \$994 Billion.

Bitcoin investors weighed a sigh of relief after the European Union shot down a proposed rule that could have limited the cryptocurrencies that use proof-of-work. The focus will now shift to the United States Federal Reserve policy meeting on March 16, which could result in increased volatility.

Without a major trigger, Bitcoin prices have been range-bound in 2022. While long-term investors seem to be accumulating on dips, the short-term traders who have purchased at higher levels may be liquidating their positions on rallies near \$47,000 to "get their initial investment back," said Brett Munster at Blockforce Capital.

A positive sign of accumulation by long-term investors can be seen in the Bitcoin balances on major crypto exchanges, which have been reducing. Data from on-chain analytics firm CryptoQuant shows that combined Bitcoin balances across 21 major exchanges have dropped to their lowest level since August 2018.

During this period of uncertainty and high inflation, Tesla CEO Elon Musk advised his followers to "own physical things like a home or stock in companies you think make good products, than dollars when

inflation is high." Musk added that he owns Bitcoin, Ethereum and Dogecoin and does not plan to sell his crypto holdings.

Although a Bitcoin rally to \$100,000 seems like a distant dream at current levels, several investors remain bullish for the long term. Apple co-founder Steve Wozniak while speaking on the podcast "Steve-O's Wild Ride," said he expects Bitcoin to reach \$100,000 due to the high interest in crypto.

CoinShares' latest Digital Asset Fund Flows Weekly Report showed an outflow of \$110 million after seven consecutive weeks of inflows. This shows that some investors may be reducing their crypto exposure due to its lacklustre performance compared to gold.

Percentage of Total Market Capitalization (Dominance)

Bashoswap DEX

Bashoswap DEX is a new DeFi protocol on the Cardano blockchain that will utilize the AMM protocol for token swaps.

We will also be introducing a single token design for liquidity pools (instead of using the regular pool pairs).

This will be made possible by grouping deposited tokens into a virtual pair with the Bash Virtual USD stable coin.

Our first product is an Automated Market Maker using the Paired token liquidity pool design.

Liquidity pools are smart contracts to which Liquidity Providers (LPs) deposit funds. Once the funds have been deposited to the pool, the AMM's algorithm creates the market for the digital assets to be traded, instead of using an order book.

Truly Decentralised

Non Custodial And Permissionless

Liquidity Providers are rewarded in fees for each transaction

Multiple Protocols To Ensure The Best Liquidity & Fees

We are one of the foremost projects on cardano to utilise The AMM & Programmable Orderbook Model

Earn Passive Income On Your Holdings

[Whitepaper](#)

CRYPTO TRADE OPPORTUNITIES

BITCOIN - BTC/USD

Bitcoin has formed a descending triangle pattern which will complete on a break and close below \$37,020. The BTC/USD pair could then decline to the strong support zone of \$34,322 and \$32,933.

Contrary to this assumption, if the price rebounds off \$37,020, it will suggest that bulls are accumulating

near this support. The buyers will then attempt to push and sustain the price above the downtrend line and the 50-day simple moving average (SMA).

Such a move will invalidate the bearish setup, which could attract buyers. The pair could then start its northward march toward the overhead resistance at \$45,500 where the bears are expected to mount a strong defence.

The flat moving averages and the relative strength index (RSI) near 47 point to a possible range-bound action in the short term.

Traders may wait for the price to break and close above the 50-day SMA before turning positive. Bottom fishing may be avoided if the price sustains below \$37,000.

[Previous Analysis...](#)

ETHEREUM - ETH/USD

Ether's rebound off the support line of the symmetrical triangle fizzled out at the 50-day SMA on March 9. This indicates that bears are selling at every resistance level.

If the price breaks and sustains below the support

line of the triangle, it will suggest that the bears have overpowered the bulls. That could indicate the resumption of the downtrend.

The ETH/USD pair could drop to \$2,159 where the bulls may attempt to stall the decline. Any rebound is likely to face stiff resistance at the breakdown level from the triangle. A break and close below \$2,159 could open the doors for a possible decline to \$2,000.

Alternatively, if the price bounces off the support line, the bulls will make one more attempt to push the pair above the 50-day SMA and the resistance line of the triangle. Traders could turn positive in the short term after the price closes above the triangle.

[Previous Analysis...](#)

RIPPLE - XRP/USD

The buyers attempted to push the price above the resistance line of the triangle on March 12 but the bears were in no mood to let go of their advantage. The price turned down from the resistance line but a minor

positive is that the bulls are attempting to defend the 50-day SMA.

If the price rebounds off the 50-day SMA, the buyers will again try to drive and sustain the pair above the resistance line. If they succeed, the XRP/USD pair could turn positive in the short term and rally toward the psychological level at \$1.

On the other hand, if the price breaks below the 50-day SMA, the bears will fancy their chances and try to sink the pair below the support line.

This is an important level to keep an eye on because if it cracks, the pair could plummet to \$0.62 and later drop to the critical support at \$0.54.

[Previous Analysis...](#)

CARDANO - ADA/USD

The bulls have been attempting to defend the \$0.78 level for the past few days but the failure to achieve a strong rebound off it indicates a lack of demand at higher levels.

If the bulls fail to push and sustain the price above

\$0.87 within the next few days, the possibility of a break below \$0.78 increases. If that happens, the ADA/USD pair could drop to the critical support at \$0.74. A break and close below this level could signal the resumption of the downtrend. The pair could then slide to \$0.60.

Alternatively, if the price rises from the current level and breaks above \$0.87, the bulls will attempt to push the pair to the 50-day SMA. The positive divergence on the RSI indicates that the bearish momentum may be reducing.

A break and close above the 50-day SMA could provide an opportunity to short-term traders with a target objective of \$1.26.

[Previous Analysis...](#)

BINANCE - BNB/USD

Binance Coin has formed a symmetrical triangle pattern, indicating indecision among the bulls and the bears. While the bulls are buying on dips to the support line, the bears are selling on rallies to the resistance line. The price action inside a triangle is usually random and volatile.

The price rebounded off the support line on March 14 but the bulls are struggling to sustain the higher levels. If bears succeed in sinking the price below the support line, the downtrend could resume.

The pair could first drop to \$300 and then to the pattern target of the setup at \$246. The RSI in the negative territory indicates the path of least resistance is to the downside.

This negative view will invalidate in the short term if the price rebounds off the support line and breaks above the 50-day SMA. Such a move will indicate accumulation on dips.

A possible trend change will be signalled after the price breaks and sustains above the triangle.

NFT MARKET SUMMARY

The year 2022 started on a relatively optimistic note but things changed very soon and we have moved in to a situation which is besieged by war, meltdown in financial markets and high inflation in most countries around the world. The financial markets have been witnessing significant sell-offs on a regular basis although commodity prices are rising, thereby exacerbating the cloud of uncertainty around us.

In the midst of all these, we are witnessing a war in which cryptocurrency and even NFT are playing a part. Who would have thought that such digital assets would one day play a role in wars that involve battle tanks and fighter jets?

Ukraine has been seeking donations and contributions from people in all forms including cryptocurrencies and its leaders are regularly tweeting the address of their digital wallets where people can send their contributions in digital currencies.

As the story below points out, Ukraine has already received millions of dollars as donation or contributions in cryptocurrencies and has used a part of that on military equipment and on civilian needs. Read on to find out more about how the current war situation in Ukraine is quite unlike what have seen or know so far.

CryptoPunks NFT donates to Ukraine's campaign

One of the world's most sought after NFT projects, CryptoPunks NFT, has transferred US \$33 million

in cryptocurrency to Ukraine's Ethereum wallet on Tuesday. It came on a day when almost \$10 million was donated just in Ethereum and other crypto tokens, thereby making it the greatest single day since Ukraine started seeking contributions.

By some estimates, at least \$14 of the total donated cryptocurrency so far, has already been spent on military equipment and civilian supplies including food and fuel. It may be recalled that Ukraine has appealed for assistance in the form of money and weaponry to help it fight against Russia, which invaded the smaller European nation last month.

CryptoPunks is a collection of 10,000 distinct digital characters including Apes, Zombies, etc and reside on the Ethereum blockchain. All the 10,000 NFT were bought within few hours of its launch and the same can now be bought from the secondary market.

Ninja Fantasy Trader NFT

Ninja Fantasy Trader is the first financial NFT game in the metaverse. Their first NFT collection is 31,700 rare NFTTraders called Samurais. Upon owning a Samurai, you get access to the first financial NFT game where you play to earn in live markets such as cryptocurrencies, stocks, forex and commodities.

You can test your skills as martial artist in trading battles and tournaments against other Ninja players. You can also create companies, get investors, own buildings and offices and make profits from the real estate. Your ownership of a Samurai also gets you a VIP membership to trading course, daily market analysis, signals, access to VIP trading group and a community of thousands of real traders.

Around 10,144 Samurais are available for pre-sale at discounted prices and they are the rarest ones, which possess unique features and superior genes compared to the other NFTTraders.

The mission is to build a community where players are an active part of the first financial play-to-earn game, that has a real-world reference on the movement of assets in different markets. The vision of the team behind the project is to start a revolution where everything in commercial finances can be represented in a more fair and accessible way in a game that has a direct impact on the lives of its users by achieving enormous growth in both knowledge and earnings.

Generic Heroes League NFT

Generic Heroes League (GHL) NFT is a collection of 4,444 Heroes living in the Ethereum metaverse, whose minting will begin over the weekend. Holders of the Heroes NFT can earn \$POWER tokens daily, take part in NFT claims, giveaways and be part of a Decentralized Autonomous Organization (DAO)

responsible for the first ever community-driven comics storyboard. All comics will be hand-drawn and launched as an NFT with lot of utility as well.

Each first edition Heroes NFT will produce 10 \$POWER tokens every day for the next 10 years and you can use them to name your Hero, write his history or stake to earn more \$POWER and even vote on the future of GHL.

There will be a Heroes Vault and holders of the Heroes NFT will be able to take part in coordination of the Vault. This Vault will receive 20% of all royalties from the present and future initiatives and holders can vote about the usage of the funds.

In the third quarter of 2022, the project will be ready for the metaverse and all the assets of the NFT can be used in the metaverse. It will also be extended to Sandbox, where a field will be bought once the entire project is sold out. The field will be their Diamond League Hall, where all the Heroes will meet and host special events.

Femmes Bizarre NFT

The Femmes Bizarre NFT is a collection of 11,111 NFT, handcrafted by a young feminine artist and placed on the Ethereum blockchain network. The creative desire of the 17-year old artist has brought to life varying fashion statements, eye-catching styles and different perspectives.

The NFT has three female characters – Gangsta Wife Matilda, Wild Hunter Uma and Secret Agent Baby Lilu. In addition to the over 300 hand-drawn qualities, there are a number of very unusual ones as well. This number has the potential to produce more than 11,111 NFT pieces.

One of the main goals of the project is to create a global art brand around the work of Salamandre, the artist behind it.

In terms of the roadmap, there are giveaways too. For instance, 25 randomly picked Femmes Bizarre NFT will be delivered to wallets holding at least one Femmes Bizarre NFT once 25% of the collection is sold out.

Similar or corresponding ratio of giveaways will be followed when 50% and 75% of the collection are sold out respectively. In addition, a collection of customized couture merch will be launched when 75% of the sales is achieved. When the entire 100% of the collection is sold out, they will sponsor a project of chess classes for autistic kids.

Conclusion

As we have seen in the past as well as from some of the stories mentioned above, NFT continue to make forays into hitherto unimaginable areas of real world and will soon be very much part of our mainstream lives apart from its diligent and consistent moves in the metaverse.

We have heard about NFT helping struggling artists, supporting efforts to save endangered species,

helping mental health issues of humans and even supporting causes related to environment conservation. The interests of young children in launching their own NFT projects also augurs well for the community.

The latest to be added are the world's first financial NFT game and Ukraine seeking contribution in cryptocurrencies and one of the world's most popular NFT collections donating funds to help in the Ukrainian cause. However, as more such utilities of such digital assets evolve over time in our mainstream lives, we have to be careful of its misuse and falling victims to frauds using the same digital assets.

We have seen and learnt a lot in the realm of digital world and lot more still remains to be learnt and discovered in the metaverse and real-world use cases of digital assets. Hope you enjoyed reading it. Thank you.

NINJA FANTASY TRADER

FIRST FINANCIAL NFT GAME IN THE METAVERSE.

HAVE NFT SOON TO LAUNCH WITH MEDAL OF HONOR RECIPIENT FLORENT GROBERG'S SUPPORT

HAVE (Humble Alpha Veteran Empowerment) is launching an NFT (non-fungible tokens) project, on 10 March 2022, designed specifically to address the ongoing needs of Veterans. HAVE recently was honored to receive Florent Groberg's support, one of 67 living Medal of Honor recipients, to the project. The project aims to raise funds through four drops (launches) of Veteran-inspired NFTs, to further the development of the HAVE ecosystem of support and financial services designed to empower Veterans. Funds will also be donated to 25 Veteran-focused non-profit organizations (NPO) each drop. NFTs developed for Veterans by Veterans, HAVE NFT connects the Veteran community to support, opportunities, and funding through the NFT industry.

"This is a journey and HAVE NFT is leading the way into this whole new world. I'm excited to be a part of it because of the people involved on this journey", explained Groberg. "One thing I learned a long time ago, whether it was on a soccer field, on the track, or in the mountains of Afghanistan, it's a lot easier to get things done with a team of like minded people who are committed to the mission. We have an objective, and we're gonna make a difference in the Veteran community."

HAVE founders, Steven Kuhn and Lane Belone, have been working diligently for the past 4 years in building organizations like the Vetpreneur Tribe and Warrior Council with other Veterans to address the healing and business needs of Veterans. HAVE NFT was born from an idea to tokenize Challenge

Coins as NFTs as a way to raise awareness and funds, and to accelerate the impact that HAVE is making.

What are HAVE NFTs?

HAVE NFTs are being launched on the Ekta blockchain, combining the concept of traditional Challenge Coins with the emerging technology of NFTs. Challenge Coins are collectible coins or medallions that carry a unit's emblem. With use dating back to Roman soldiers, Challenge Coins are regularly used to prove membership to a unit, to strengthen camaraderie, and recognize valor and success.

The HAVE team connected Challenge Coins to the burgeoning world of NFTs and the metaverse to create HAVE NFTs. NFTs are unique digital tokens with verifiable ownership, created on blockchain networks and can represent a unique digital asset or something unique in the physical world. HAVE NFTs are unique digital Challenge Coins that establish membership into the HAVE ecosystem, giving the owner access to all the services and benefits that both HAVE and the Ekta blockchain provide.

How HAVE NFT funds will be used

- Launch the full HAVE ecosystem, connecting Veterans to the decentralized finance economy for access to capital, opportunities, and empowerment programs like the Vetpreneur program

- Continual development of HAVE Events, online and offline, that promote networking, education, and

entrepreneurial development

- HAVE NFT will donate 5% of the funds raised to Veteran nonprofits – 25 nonprofit organizations per NFT Drop until 100 nonprofits are supported over 4 separate mints

- Fund Veteran gatherings, retreats, and healing work, virtual and in-person; in collaboration with Veteran nonprofit partners

The benefits of owning a HAVE NFT

HAVE NFT owners enjoy benefits in both the real world and the blockchain world. In the physical world, holders gain access to all the events and activities within the HAVE platform as detailed above. In the digital and blockchain world, HAVE NFT holders can earn passive income by staking their NFTs for cryptocurrency returns. Holders also gain access to the growing investment tools and financial opportunities with the Ekta blockchain ecosystem. This can take the form of investment pools, fractional real estate investment, and access to early-stage startup investment through the blockchain.

“HAVE NFT is the digital arm of the Humble Alpha Veteran Empowerment movement. We connect the real world with the digital world while maintaining the authentic connections and work we’ve been doing in person for years. Having the support of someone like Florent is huge, and validation that HAVE is moving in the right direction. As we develop and give back to the community, we’ll continue to develop HAVE based on what is good and needed for the community.” says Steven Kuhn, HAVE co-founder.

The whitelist (waiting list) is open now for the first

NFT to launch, the HAVE Veteran Bulldog. Go to havenft.io to learn more and to get on the whitelist. HAVE NFT Co-Founder Steven Kuhn stated, “We believe that Platinum Crypto Academy, with their 7 years’ experience, were a first mover for good reason. Simply put: They possess the required experience and extensive knowledge needed to support and further our unique ecosystem. In this new market it is next to impossible to find any company with such a wide experience for such a long time. Together we are confident in growing the already largest profit for purpose project in the Metaverse.”

Karnav Shah, Editor in Chief at Cryptonaire Weekly thinks highly of the HAVE NFT project, he explained, “HAVE NFT is the first and only one of its kind Veteran-Focused NFT. We make sure to help them reach the larger crypto community by sharing more about these shapeshifting solutions with our readers and across our community channels.”

Hopefully, you have enjoyed today’s article for further coverage please check out our crypto Blog Page Thanks for reading! Have a fantastic day! Live from the Platinum Crypto Trading Floor.

NINJA FANTASY TRADER ANNOUNCES ITS FIRST TRADING CONTEST OF NFRADERS OR SAMURAI

Ninja Fantasy Trader is all set to become the world's first financial NFT game operating across the metaverse. The game will provide its users a platform to play under the P2E mechanism, which would be processed and operated with the help of dedicated NFTs known as NFRaders or Samurais. Before Ninja Fantasy Trader makes a statement across the digital ecosystem with its state-of-the-art model, the game is all set to bring its first presale of 3000 Samurais on the 18th of March for its users. This is only the first batch out of three collections.

While becoming part of the launch of the project, it is important to be aware of its dynamics. Ninja Fantasy Trader, by default, is a play-to-earn trading game. It offers users a competitive trading platform that deals across cryptocurrencies, forex, stocks, and commodities. Users become a part of the platform through their NFRaders and perform trading across real-world data for winning prizes and rewards across the game. As it completes the essence of trading with cryptocurrencies across the platform, it gamified the complete trading process under the GameFi concept, combining the real and virtual world to perfection.

As this project is a combination of three different domains across the digital ecosystem, it has grabbed the attention of the major players across the market. Ninja Fantasy Trader combines cryptocurrency, NFTs, and metaverse to present the world with the first financial NFT game featuring multiple levels. The metaverse, known as Traderland, which has been

built to cater to this concept, is built across eight different cities. The NFTs, which are minted across this first scheduled presale, along with the NFT drops that would follow this, act as the in-game characters that would power the metaverse. These NFTs or Samurais are known as NFRaders across the game with the motive of trading across the metaverse. The gameplay would be supported by a BEP-20 token, NTC (Ninja Token Coffee), acting as the in-game currency for this metaverse.

Ninja Fantasy Trader is bound to present one of the most important events of the project on the 18th of March. It will be featuring its first NFTs drop, which is referred to as the "First Trading Contest of Ninja Fantasy Trader." This event will act as the moment that would drive the future of this game to excellence. Ninja Fantasy Trader will be introducing its first batch of 3000 Samurais for minting with two more to come later. As a user mints an NFRaders across this contest, they will be provided an option of opening a trade, which is one essential benefit of being a part of the VIP membership. This trade would determine the value of the NFRaders corresponding to how that trade is going. Along with that, Ninja Fantasy Trader also announced a prize worth \$10,000 in NFRaders and ETH for the people who would take part in the Trading Contest. This prize shall be distributed among the first three winners of the first batch of the presale, as this Trading Contest is only available for those who participate in the minting of the first batch.

CEO Ariel Eduardo Morales and his team are excited

to welcome players into the first Trading Contest of Ninja Fantasy Traders, scheduled for the 18th of March. This shall provide them with the options of becoming a part of Traderland and numerous other planned projects which are a part of the game's roadmap.

About Ninja Fantasy Trader

Ninja Fantasy Trader is all set to become the world's first financial NFT Game that features a metaverse offering unique gaming features to people. The project intends to provide traders with a haven, known as NFT-Companies, to structure their personal companies across the metaverse through NFTraders. This would be implemented and practically utilized across the project's metaverse, Traderland. Ninja Fantasy Trader has great potential and believes in improving the prevailing P2E structure positively.

Transfers of non-fungible tokens or NFT have surpassed those of US dollar-pegged stablecoins and altcoins, while the supply of wrapped Bitcoins remained relatively stagnant in the last few months, according to an update from Coin Metrics.

Daily NFT transfers topped 50,000 on average since July and maintained an upward trend to such an extent that the daily NFT transfers are now averaging 300,000. On the other hand, transfers of altcoins and stablecoins have decreased steadily since July.

Altcoin transfers have fallen to 30,000 per day from 42,000 while transfer of stablecoins are down to 18,000 per day from an average of 24,000 per day in July. These numbers make it clear that NFT have become more popular than they have ever been.

Last weekend, however, the NFT world was briefly thrown into chaos when some OpenSea users were hit by an email phishing scam and NFTs worth millions of dollars were stolen. The chaos was temporary, as transfers of ERC-721, the token standard for NFT on the Ethereum network, barely slowed down at that time but soon bounced back to all-time highs.

OpenSea is currently the all-time leader in NFT trading volume with US \$21.85 in traded value but other marketplaces like LooksRare threatens to challenge the dominance of OpenSea. LooksRare, launched in early January, was able to bring in a large swathe of customers by offering only 2% of basic sales and zero fees on private sales, compared to

2.5% fees on every transaction on OpenSea.

The NFT collections that helped LooksRare zoom on popularity charts are Meebits, that come from LarvaLabs, the same creators behind CryptoPunks and Autoglyphs.

LooksRare also allows traders to earn rewards in the form of its native LOOKS token for buying and selling NFTs. However, the rising popularity of LooksRare is also seen as controversial, as there are reports of the platform overflowing with wash trading to rig the token-based rewards system. Some users and journalists have observed and reported a number of repeated false transactions.

Meanwhile, the surge in trading volumes on OpenSea in recent weeks appeared to be fueled by the price increase in Bored Ape Yacht Club (BAYC) and its sibling collections Mutant Ape Yacht Club (MAYC) and Bored Ape Kennel Club (BAKC). BAYC, which has a large number of celebrity owners, is still the most popular NFT collection on OpenSea.

OpenSea, incidentally, announced a US \$300 million Series C funding early this year, led by venture capital firms Paradigm and Coatue. The fresh infusion of funds raised OpenSea's valuation to US \$13.3 billion and the firm plans to use the funds for product improvement and hiring of new employees.

The popularity of NFT is partly attributed to the expansion of pro sports and music industry into

NFT and the growth of virtual real estate. For example, NFL superstar Tom Brady raised US \$170 million in January to help scale up his Autograph NFT marketplace and recording artist John Legend launched an NFT platform in February for musicians to tokenize their work.

Besides, many NFT projects or collections are collaborating with strong thought leaders, brands and communities to increase their overall value in terms of social and investment capital.

TREESOME NFT: TREE-INSPIRED NFTS LIVING ON THE ETHEREUM BLOCKCHAIN NETWORK

The Treesome NFT project is a collection of 10,000 tree-inspired NFTs living on the Ethereum blockchain network. The NFT collection will not only bring benefits to its holders but the developers also intend to plant half a million trees and further donate funds to relevant charities. In other words, a project that is dedicated to fight deforestation and out to make a difference.

One of the biggest objections to the crypto and the NFT spaces are the high amount of energy required to mint as well as run them. The team behind Treesome, Sapling Daddy and ultimateSEED, have

been studying the NFT space and agree that there should be more focus on sustainability and the environmental aspects of NFTs.

Although the minting date is yet to be announced, the developers have also confirmed that upon selling out, each holder of a Treesome NFT will have funded the planting of 50 trees, which means 500,000 trees will be planted in all. The tentative date is reported to be sometime in mid to late February and each NFT will cost 0.08 Ethereum.

The project developers have already started their presale promotions and have collaborated with other NFT projects for giveaways. For instance, in late January, it has partnered with Angry Boars project to give away two free Angry Boars NFTs and 10 Whitelist spots for Treesome NFT through promotions on their social media channels.

Thereafter in February, it gave away 5 whitelist roles to anyone with a wallet address but without whitelist roles, as a mini-giveaway.

Meanwhile, although the developers of the project acknowledge the importance of their community, they also want everyone to feel safe and welcome. Their main goal is to help the environment and lead a good example for future NFT projects, as well as give back to the community.

The people behind the Treesome project is a group of friends who are passionate about crypto and NFTs. The project's name – Treesome – was derived from wholesome and tree.

The Swiss startup “bitcci” has launched its first local token store in the heart of the emerging European crypto hotspot Northern Cyprus to market its own payment token “bitcci cash” to the general public. bitcci is a consortium of Swiss enterprises that is currently in the ICO phase and doing an IEO on several exchanges at the same time. The ICO’s soft cap of \$5 million has already been reached.

bitcci frees the sex business from tensions and problems by establishing a new, modern culture of acceptance, transparency, trust, and individual autonomy. bitcci optimizes, regulates, and decentralizes the whole sector, creates new business areas, introduces cutting-edge technology, and makes the industry and its players free and secure.

bitcci Founder Christoph Elbert says:

“We have chosen Northern Cyprus as the location for our first bitcci Token store because in northern Cyprus we can observe a lot of high profile crypto investors, crypto-based Exchange offices, and very crypto-friendly surroundings. Citizens can buy even plots of land, houses, cars & more directly with crypto in northern Cyprus. The bitcci Token store is located on the main road at a high traffic circle, has 100 square meters of store space, and lots of international walk-in customers. The purpose of our token stores is to show the bitcci cash Token and its use cases to the public. We plan to open up the next bitcci store in other locations soon.”

The bitcci ICO has raised over \$6 million USD and

attracted over 4,000 token holders until now. With approximately 8.5 billion bitcci cash tokens sold for 0.0018 USD a piece, the ICO is now 43% complete. The ICO will continue for another 25 days before all unsold tokens are burnt.

To entice new partners, bitcci has placed 200 massive posters around Crypto Valley hotspots in Switzerland.

Cryptocurrencies are notorious for their anonymity, making them perfect for companies that value privacy. This is where the adult entertainment industry fits in. Blockchain has the potential to revitalize the escort and adult entertainment industries by providing a solution to the industry’s lack of transparency and decentralization. bitcci is a set of publicly traded firms based in Switzerland and Lichtenstein’s crypto valleys that will transform the sector.

Why could bitcci make a difference?

Adult entertainment is one of the world’s fastest-growing industries, with demand rising every year. As a result of this necessity, the sector is being investigated more closely in order to improve transparency and compliance with data rules.

The bitcci ecosystem has different companies and departments designed to ensure it is sustainable and achieves its intended goals.

bitcci Nightclub Network:

bitcci has already started to establish the “bitcci Nightclub Network” and is prepared to buy land. The bitcci Nightclub Network is a worldwide network of

world-class physical sauna clubs. bitcci plans to build the first nightclubs in Europe by the 4th quarter of 2022 as part of the first phase. After this phase, the company will expand to more regions globally.

bitcci Bank:

The sex industry suffers a lot from rejection by financial institutes and banks.

The bitcci Bank AG will be founded in Q3 / 2022 and will solve this problem. The company will have a fully regulated banking licence and will provide professional financial services for all participants of the sex industry, like IBAN Accounts, Crypto Debit Cards, ATMs, and more.

bitcci Academy:

The main purpose of the bitcci academy is to help sex workers to improve their lives and stay healthy, secure, and become wealthy and happy. The bitcci Academy runs the bitcci LIFE platform. bitcci LIFE is the next generation, blockchain-driven lifestyle program and wellbeing package for sex workers. It consists of modern infrastructure, professional services, trustworthy future planning, exciting education, inspiring teachings, and state-of-the-art online and offline tools.

bitcci TV:

bitcci.TV is an internet-based TV channel on which our anchorwomen present the latest news from the bitcci ecosystems and Blockchain news on weekly basis. The programmes are editorially prepared to appeal all partners of the bitcci ecosystem, Escort Girls, Customers, Investors, Affiliates, Marketing Experts, Exchanges, and Authorities. We have already expanded our existing team for our studio operations, content creation, guest interviews, interaction with viewers, etc. bitcci.TV will go live with its first Trailers in the First Quarter of 2022.

bitcci portal and its App:

The bitcci portal is currently under development, which includes “bitcci.com” and new live communication features such as chat, phone, and webcam with a fully integrated payment system “bitcci cash”. The bitcci.com portal and the bitcci app are expected to launch in Q2 2022, and bitcci expects to reach 1 million registered escort and adult service providers by Q4 2022.

bitcci ID and bitcci connect:

bitcci also creates an API interface for government agencies. Regulators can use the interface to provide secure and real-time access to all data of escort providers in the bitcci ecosystem. This will enable the bitcci Group AG and the entire bitcci ecosystem to be recognized by the authorities as a professional

partner.

bitcci cash:

The Payment Token “bitcci cash “ can be used as a currency to pay for all products and services inside the bitcci ecosystem.

The project makes use of blockchain technology to build a stable and secure foundation for the emerging global sex economy. Tokenization is the process of converting an asset’s rights into a digital ‘Token.’ Stocks, bonds, ETFs, and other financial instruments are examples of security. Rather than a “physical” document, the digital token “certifies” the asset’s ownership.

XMETAFANS

DEDICATED VR CONTENT STREAMING PLATFORM FOR ENTERTAINMENT

The adoption of blockchain technology in the adult industry is on the rise, as blockchain brings huge benefits to consumers, models, and companies. With cryptocurrencies, you can pay with ease and in an effortless manner, eliminating the barriers and censorship which are present with traditional payment processors. One such project is XMetaFans, a VR-based, adult industry project that will bring content creators onto the blockchain. By offering censorship-resistant, affordable, legal, and compliant services, the project aims to specifically address the needs of the \$100B entertainment industry.

XMetaFans' crypto-based business model will also give adult industry workers more control over their finances when they use them in the adult industry. Our wallets will prevent pimps, brothels, or corrupt government officials from pocketing the earnings of adult content creators.

The XMetaFans Project: Some major features

Stream VR content on a dedicated platform. XMetaFans utilises VR technology to create a platform for streaming VR content.

Getting paid for live performances. Using native tokens and incentive models, we are creating a revolutionary platform to monetise content and live

performances in full HD, 4K, 3D, and VR.

Decentralised payment platform. Content creators will be rewarded for their work and provided with an anonymity layer.

Marketplace for NFT. On XMetaFans, fans can purchase and trade unique collectibles such as non-fungible tokens and other unique collections.

XMetaFans launchpad. The mission of XMetaFans is to establish itself as the governing ecosystem of the crypto world in the adult entertainment industry. As part of our launchpad, all technical, legal, marketing, and community growth aspects are handled by our team.

XMetaFans will be the industry's first mover, leading the charge. It's a fact that performers and content creators don't receive adequate compensation in the entertainment industry. XMetaFans will allow creators to maximise their income by ensuring instant payment. They can then devote their efforts to what they love. Content creators and performers will be able to access a native currency instead of intermediaries who currently extract exorbitant commissions. XMetaFans will be provided with instant, safe, and secure online payments by using a tokenised system.

The Editor-in-Chief of Cryptonaire Weekly, Mr. Karnav Shah, talking about the potential of XMetaFans, has said, “The company’s mission is to bring the entertainment industry into the blockchain era. Their goal is to mobilize models and fans by providing an open platform, decentralized for peer-to-peer interactions. This will provide adult models and fans with a way to harness the power of anonymity through cryptocurrency. In general, the project has great potential to disrupt the current model of the adult industry.”

Tiberiu Nedelea, co-founder and CEO of XMetaFans says that, “The world has never seen anything like this, it’s ambitious, everybody told us but we’re not afraid— it’s exciting and just the type of project we love to take on! We really hope to get maximum exposure to our project with Platinum’s help and we’re also offering the weekly users the chance to take an active role in growing this project together.

We are determined to empower our referrals through a highly rewarding affiliate program. Take part now!”

**MAKE MONEY
 HANDS-FREE WITH MAXXER,
 THE FIRST SOCIAL TRADING EXCHANGE!**

Social Trading (a form of investing that allows investors to observe and directly copy the trading behavior of expert traders) is a concept you may have seen on traditional trading sites, but maxxer does things differently. They are a community driven & regulated crypto exchange, that brings crypto novices and experts together.

‘The aim of our exchange is to lower the doorstep for people who want to get involved, but have no idea where to start.’ – Salomo van Mook, CBDO of **maxxer**.

Users can either follow top traders on **maxxer** and automatically copy their trades, or become Social Traders themselves and compete in the **maxxer** social trading league for huge rewards. The league also acts as a qualifier for users to choose the best Social Trader, with badges and achievements clearly shown on their profile pictures! Social Trading is such a simple concept that is yet to be used on a crypto exchange, with massive upside potential; ‘it allows people to make money hands-free’.

maxxer was founded by veteran crypto enthusiasts who have combined decades of experience in crypto investing and business development. The group is now 30+ people, made up of worldwide skilled developers, marketers and young crypto adopters who have put extensive work and research

into producing the best exchange possible.

The development of the **maxxer** exchange started in 2020, with over €1.5m raised in seed capital alone. It will have all the functions of a crypto exchange like Binance or Kucoin, as well as intuitive copy trading features, a social network and an incredibly interactive league system. They are serious about bringing social trading to crypto!

‘A sense of community and gamified experience are what the biggest exchanges are missing’.

To help facilitate the exchange, **maxxer** also has its own \$MXXR token. The €1m private sale was filled by keen investors, and is in its 25% discount stage until the 14th March. \$MXXR has major benefits for holders, like 50% discounted trading fees when using \$MXXR as a pair, automatic raffle entry into quarterly lotteries and even having a say in major charity donations along with much more! If you’d like to learn more and get in early on \$MXXR it’s currently purchasable at a discount here: ieo.maxxer.com. The **maxxer** exchange launches in Q2, with the closed beta trading ‘Kickoff Competition’ starting in April they are welcoming applicants now! They truly believe their exchange will make Social Trading the new meta in crypto, and with the advantage of being the first major movers, **maxxer** is the one to watch in 2022.

Discussing the Maxxer Project, Editor in Chief at Cryptonaire Weekly Mr Karnav Shah noted, “ It’s rare you come across a project that explores wider utilities of the blockchain technology and expands the horizons like how Maxxer does. We are truly excited to share the Maxxer project and explain its fundamentals to our readers and how maxxer is the first centralised and regulated crypto exchange that focuses and rewards a communal and social trading system! We are certain that we will have more about this promising venture in our subsequent publications.”

A quote from Salomo van Mook, CBDO of maxxer, “Not only from a numbers driven viewpoint but also for the friendly team, Platinum have been great for maxxer’s exposure. Our goal is providing a community driven, gamified trading exchange and Platinum have helped us in showing this to a new audience! Their response time is great and the

finished product is more than satisfactory, looking forward to our next publication!”

London, UK – Cardano Startup Bashoswap announces the launch of its Cardano-Powered decentralized exchange and launchpad project.

Bashoswap is a decentralized exchange (DEX) based on Cardano network that aims to facilitate swaps between ADA and other crypto assets built on the Cardano Blockchain. Founded in late 2021 by a group of blockchain experts led by Beri Ardas with years of experience in the crypto industry.

Bashoswap is on a mission to develop a fully featured de-fi product that will be of huge benefit to the Cardano ecosystem. Bashoswap will join together elements already existing on other blockchains like the AMM model on Uniswap and Pancakeswap, readapting it for the Cardano Blockchain to develop de-fi Apps powered by the Bash token.

\$BASH, Bashoswap’s utility token, will be utilized by the bashoswap community in multiple ways as they can Stake, Farm their \$BASH tokens to earn more rewards and can also be used for governance.

When launched, users can swap their Cardano tokens, add liquidity to earn LP fees and also a launchpad that will support Cardano startups.

Bash Private sale whitelist is currently ongoing for early adopters who would want to become part

of the project. Early adopters wishing to partner with Bashoswap can email partnership@bashoswap.finance or fill the whitelist form.

Bashoswap is on a mission to develop a suite of disruptive DApps ranging from a permissionless on chain stakin, vesting protocol and also a governance protocol tailored specifically for the Cardano ecosystem which holders of \$Bash token would be able to get on the Governing DAO by staking \$Basho tokens which would in turn revolutionize the decentralized finance industry and cryptocurrency as a whole.

Cardano startup Bashoswap is utilizing the vast experience of its founding team and the power of blockchain technology to fund, develop a truly novel and disruptive product.

Bashoswap Team

Behind the Bashoswap project are a team of experienced developers and project managers.

The core founding team comprises of developers and crypto enthusiasts with a deep understanding of native assets, smart contracts on Cardano, and the overall blockchain ecosystem.

FREN FEATURE- RICH SOCIAL COMMUNITY LAUNCHED ON THE BLOCKCHAIN

Fren is a unique social landscape leveraging blockchain technology. It intends to create a community where members can meet to learn together, play together and invest in projects jointly. It has already gained traction and currently boasts of over 5,000 token holders. This token is currently trading in three exchanges and plans are underway to list it in more centralised exchanges. It is currently listed in Poloniex, BKEX and Uniswap. This token has a current market cap of over \$400K. Its social media handles are also active and it currently boasts of a membership of over 2,000 members on its telegram group.

This platform is redefining social networking by introducing new features to its community members. All these are against the backdrop of blockchain technology, which promotes anonymity and privacy. Firstly, the platform has a unique social platform known as OnlyFrens. This is a social platform where members come together to share experiences, network and interact with each other. OnlyFrens also organises feel-good events, where members meet to have a great time. Content creators within this network are also rewarded with tokens.

Secondly, the platform has a Decentralised Exchange, known as FrenDEX. On this exchange, members come to gain insight on the markets, as well as ideas on which assets to trade. Top traders within the platform share strategies on how best to beat the market. Other traders get a chance to learn and profit from these strategies.

Thirdly, the platform has a DAO known as FrenDAO. This DAO is responsible for voting on the direction of the platform. Token holders can vote directly or assign a proxy to vote on their behalf. Whatever the DAO votes on is what the developers will work on. The DAO will be responsible for voting on things such as new features and products to be added on the platform, rewards to be given to community members, and also influencers that the platform can approach.

Finally, the platform has exclusive NFTS that will be given to community members. These NFTs can be traded on secondary exchanges. They can also be used as profile pictures.

REEFER TOKEN GETS RHYMES FROM ISLAND BOYS, POSSIBLE NFT COLLECTION IN DEVELOPMENT

REEFER Token adds its first dispensary in Wisconsin

REEFER Token (<https://reefertoken.io/>) (\$REEFER), the revolutionary crypto platform for the cannabis industry received a video message from the Island Boys promoting the platform in the form of a short rap. The full video, available here is another indication of how REEFER Token is taking the cannabis industry by storm. REEFER Token has also started discussions with the duo about a Island Boys inspired collection of REEFER Token NFTs to be sold on the platform. In addition, American Cannabis Society at Green RX in Madison, WI, is now accepting REEFER Token at its business.

Figure 1: REEFER Token Gets Rhymes From Island Boys, Possible NFT Collection in Development

REEFER Token is listed on Crypto.com, the world's largest and fastest growing crypto application and index, Coinbase, the preeminent crypto currency platform, CoinMarketCap.com and CoinGecko.com. Currently, REEFER Token is only listed on these platforms and not available to be traded. REEFER Token is currently available for sale on Pancake Swap. Check REEFER's Telegram chat here for up to the minute details on new developments for the platform and token.

Reefer Token is supported by the Binance Smart

Chain. Identifying the need for a revolutionary universal solution that aligns the entire cannabis industry; growers, refiners, producers, manufacturers, retailers, and dispensaries, REEFER Token (<https://reefertoken.io/>) (\$REEFER) is launching to address the growing friction between cannabinoids and marijuana. REEFER Token aims to unite all parties in the cannabis ecosystem by providing a platform using blockchain technology to create more value for all stakeholders, including customers. REEFER Token will incorporate NFTs and gaming through an original game "Weed Wars" into this immersive ecosystem, bringing added value to producers and customers alike. The REEFER Token platform has already been adopted by 15 cannabis dispensaries & 5 vape shops in South Florida. Reefer Token also launched a line of merchandise which sold out on its 2nd day of availability.

OWN YOUR STAR OWN YOUR STORY

Dive into the ERNEST BEYOND Comic series and learn all about the characters, species and how to own your favorites as unique tradeable NFTs !

OUR MINTINGS

An overview about our Mintrounds and future drops. So checkout what you have missed and what you can get in future. Dont miss it!

ERNEST OG

Original Ernest in Disguise NFT + Spaceship Airdrop •

We sparked the collection with a Spaceship airdrop to all holders. These grant exclusive access + deals on our future launches and allow holders to travel across the Ernest Comics Universe.

STEALTH LAUNCH

Original Ernest in Disguise NFT + Original Orb •

A private sale for our holders, giving them increased chances at minting a Legendary Ernest NFT, as well as the chance to create their own character design for our season two collection.

ERNEST 360

Original Ernest in Disguise NFT + Lightning Cell + EVOs •

An exclusive sale, that gives all 360 minters a "lightning cell"- A pass to our one of one hoverboard sale. *Hoverboards belong to different characters in the comic, mint their board and you'll forever be airdropping that character's items.

ERNEST BEYOND

OUR FINAL PUBLIC SALE !!! •

Collect your Ernest now to begin your journey into the Ernest Comics Universe.

THE EVO TOKENS

Ernest Voyager Orbs (EVO) are our inhouse community currency. You won't be able to trade it on the exchange.

It is coupon that is redeemable for materials and goods produced within the Ernest Comics Universe.

THE EVO TOKENS

There is a total supply of 36,000,000 EVO tokens.

A max of 40,000 tokens will be distributed each month, through our rewards system.

21,500 will be distributed through our Ernest Engagement System (EES) *Weekly Distribution

18,500 will be distributed through our Ernest Holding System (EHS) *Monthly Distribution

The maximum amount of tokens an individual can collect per month is 1000 EVO tokens. *With our current supply, this is due to change once more Ernest's are minted.

ADVANCEMENTS IN THE CRYPTOCURRENCY WORLD

BINANCE AWARDED BAHRAIN CRYPTO SERVICE PROVIDER LICENSE

The world's largest crypto exchange will now provide various regulated crypto services to Bahraini citizens.

Crypto exchange Binance will provide fully regulated services to its first country in the Middle East thanks to a license granted by Bahrain's central bank.

Bahrain was able to issue the license through the Cooperation Council for the Arab States of the Gulf (GCC). The world's largest exchange and CEO Changpeng Zhao announced the crypto-asset service provider license on March 14.

Binance's new license allows it to offer crypto services, including trading, custody, and portfolio management for customers in the Middle East's smallest economy. Last December, Binance received an in-principal approval to operate in Bahrain. That approval has now become a full-fledged license.

Central Bank of Bahrain (CBB) governor HE Rasheed Al Maraj said that the bank was "developing regulations aligned with global trends" that "enable innovation and best practices."

The license allows Binance to continue its expansion efforts across global jurisdictions while complying with local regulations. Last week, CZ stated that he wanted Binance to "identify and invest in" traditional businesses in every economic sector worldwide with the express intent of tying them into cryptocurrency.

Despite its relative size to other countries in the region, or possibly due to that, Bahrain has been one of the most crypto-friendly countries in the Middle East. The CBB successfully trialed JP Morgan's crypto payment system Onyx in January.

10M Ether Now Locked on Eth 2.0 Staking Contract

The landmark figure represents over \$26 billion worth of the asset at current prices.

Over 10 million ether (ETH) is now locked on Ethereum's Eth 2.0 staking contract ahead of a planned upgrade to a proof-of-stake blockchain, data from analytics tool Dune Analytics show.

The landmark figure was reached nearly 15 months after Eth 2.0 staking went live in November 2020 following a consensus vote.

Eth 2.0 is the Ethereum network's multi-stage shift to a proof-of-stake consensus mechanism, which validates transactions using nodes run by "stakers." This is in favor of the current proof-of-work design, which relies on centralized entities called "miners" for validating transactions on the network.

The current design has resulted in a slow and expensive network, with fees reaching exorbitant prices of \$250 and above, during periods of congestion.

The Eth 2.0 deposit contract initially required 524,000 ether to launch but was oversubscribed by over 400% in the days closer to the launch after a slow start.

The data shows that 67,040 unique depositors have contributed to the staking contract. The contributed ether is locked and inaccessible but stakers are earning 4.81% in annual yields, data from Staking Rewards show. This month saw a spike of ether deposits to the Eth 2.0 contracts after a relatively lean period in January and February this year, charts show.

Former Walt Disney CEO Bob Iger Backs Metaverse Startup

Iger joins Genies, an NFT digital avatar platform as an advisor on its board of directors.

In brief

Bob Iger, a longtime Disney fixture, joined NFT producer Genies

LA-based Genies has raised \$100 million and has customer that include major record labels

Bob Iger, the former CEO of the Walt Disney Company, announced today on Twitter he is joining the board of directors of Genies, a digital avatar platform built on the Flow blockchain, a protocol for NFT collectibles and large-scale crypto games. Iger served as CEO of the Disney company from 2005 to 2020. At Genies, Iger will serve in an advisory role.

"Thrilled to be joining the @genies Board of Directors to help @akashnigam and company empower humans to create the "mobile apps of web3": avatar ecosystems," Iger tweeted.

Since launching in December 2016, Los Angeles-based Genies has raised \$100 million in funding, including a \$65 million round in 2021 led by Miami Group. That same year, Genies signed partnerships with Universal Music Group and Warner Music Group to become the official provider of avatars and NFTs for artists at the music labels. Genies co-founder and CEO, Akash Nigam describes Genies avatars as a combination of different NFTs worn by a digital avatar that users can buy, sell and trade with other collectors.

ASIMI: A BLOCKCHAIN-BASED AD COMPANY HELPS ADVERTISERS AND EARNERS!

Intro Advertising Cryptocurrency

Online advertising is one of the largest markets and adopting blockchain technology in this field will be a force to reckon with. Applications of blockchain technology in advertising come with a number of benefits that include helping ad creators to target the right target market, share data, promote safety and privacy, as well as protect data the industry relies on. Blockchain solutions in the ads field will promote robust accountability providing all participants with a level playing field.

Online advertising highly relies on provided data as it gathers and reveals shopper's patterns and history to help push products and services in the right direction. Gone are the days when individuals had to go for costly/expensive advertising solutions. This is where ASIMI comes in. This platform is harnessing the capabilities of blockchain technology thus offering a tokenized economy to help advertisers as well as place cash in the hands of those who need it.

According to a tweet, "Earning crypto via ad seeing is first made possible by the Hashing Ad Space. Advertisers post their ads on our website, viewers can earn via watching ads, filling forms, doing surveys, and playing games."

Its success has shown more than a billion successful ad views. Let us highlight more information about the ASIMI project.

What is ASIMI Token?

ASIMI token is a virtual currency that is utilized and designed for online advertisers and enables crypto investors to reward themselves, hence obtaining an income. The key objective is to help expand and grow online businesses in addition to simplifying the mining process while at the same time reward users.

You can earn ASIMI tokens for free by watching ads, finishing surveys, completing tasks online and playing games. Therefore, there is no reason that would hinder you from becoming a crypto investor in this digital world. ASIMI is created in a way online marketers can access vast information from people who are interested in earning crypto, thus designed for people to earn free cryptocurrency. Majority of businesspeople have grabbed this opportunity offered by ASIMI to raise their online business by advertising and marketing their products, thereby creating a chance of earning ASIMI tokens.

You tend to use ASIMI tokens as medium of exchange between advertisers and earners hence enhancing sales of products in order to ensure ASIMI remains on demand. The current society is drawn into ASIMI with the purpose of earning crypto so as to boost their online entities. Furthermore, companies have increased their profit margins since they earn double tokens whereby through advertising they increase their sales plus earning free crypto currency. As a crypto investor you are welcome to purchase and sell ASIMI tokens which trades with other cryptocurrency during exchange.

During a press release, Mr. Karnav Shah, Editor in Chief at Cryptonaire Weekly said, "It's rare you come across a project that explores wider utilities of the blockchain technology and expands the horizons. We are truly excited to share the ASIMI project and explain how it harnesses blockchain technology to offer a complete tokenized economy symbiotically helping advertisers and putting money in the hands of people that need it most. We are certain that we will have more about this promising venture in our subsequent publications."

The ASIMI Token serves as a utility token making it easy to exchange in online advertising as well as provides an easy way for individuals, not only advertisers, to earn money. Combining two of the largest online markets is bound to greatly benefit individuals across the globe.

How ASIMI helps advertisers and earners?

ASIMI is made on various virtues such as reliability, consistency and transparency which enable it to be adopted in the community, thus gaining loyalty and trust from advertisers and earners. The latter have gained and earned crypto abundantly, because advertisers who own organizations are aware that once they tend to use cryptocurrency, they will be dealing with the customer directly thereby avoiding a middleman who maximizes transaction cost leading to increase of ASIMI tokens. ASIMI ensures that earners have overcome problems and issues such as hacking accounts and limitless funds they encounter with modern banking, the

transaction cost of transferring digital wallet to bank account is low.

Unlike the structure of the bank, where documentation and legal paper are prerequisites, ASIMI is free for anyone since there is no paperwork. ASIMI minimizes the number of parties involved in advertising campaigns and promotion, such parties involve the consumer, advertiser, content creator and platform used for advertisement.

As an advertiser you will upload your advertisements to a blockchain and the blockchain avails them to the platform users thus shunning away from payments made during advertisement campaigns. Lastly, ASIMI ensures that earners receive ad ASIMI tokens for engaging with the ads and sharing the private data with advertisers.

What are the key value propositions of ASIMI token?

The key value propositions that enhance and control ASIMI are numerous, they include simple and user friendly, powerful minting rewards, secure system, integrated and established exchange, value based token, global adoption, transparent and legal complaint. ASIMI tokens can only be minted out of effort from the crypto investors since its value in the marketplace is recognizable, can store value and act as a medium of exchange. ASIMI is not interested in being backed up financially based on its notion; rather it is concerned with people joining the community in order to earn free cryptocurrency

and participate in building ASIMI.

Crypto investors should mint tokens through the ASIMI proposition of viewing advertisements, thereby minters will be able to obtain tokens and use free crypto currency. ASIMI has become a solution for accessing powerful cryptocurrency as seen recently where crypto investors have attained token and since then thousands of people are joining ASIMI every year. These propositions have enabled ASIMI to take part in the revolution of online business products and system used in crypto currency space where billions of dollars are traded and earned every year.

The bottom line is that the platform is user-friendly, it offers powerful minting rewards, promotes global adoption, promotes transparency, as well as remains simple to allow anyone to participate.

How Minting of ASIMI works?

Minting facilitates building of new ASIMI tokens into the supply chain within the digital corporate world. As a crypto investor you can mint new tokens into existence through minting ads without eroding the value of ASIMI tokens. Minters at ASIMI earn crypto and get rewarded every day for minting ads, whereby you can structure your minting ad profile by navigating to the minting dashboard and initiate minting for yourself. Your daily earning of minting is affected by how you will successfully complete the mint ad for the day. Minting in ASIMI follows a certain formula:

$$AOP = (AO/CWO) * 100$$

$$ME = AOP * MSP$$

Where AOP represent ASIMI Ownership Percentage

- AO represent ASIMI Ownership
- CWO represent Company Wide Ownership
- ME represent Minting Earning
- MSP represent Minting Schedule Payment

The amount of ASIMI you own in your verified minting wallet compared to all other ASIMI minters combined value leads you to be included in the MSP for that day once you successfully mint for that day.

In addition, minting effort delivers new tokens to the markets daily at a certain rate, which are then disseminated to the minters every day thus making minting at ASIMI to follow a specific schedule. Community participants can mint the ASIMI token by viewing advertisements who can then choose to hold, use, or sell their earned tokens.

What is the objective & mission of ASIMI token?

The mission of ASIMI is to produce the most understandable minting experience that rewards crypto investors in real value for their contribution and effort. ASIMI is set up for mass adoption, where it will lead the way as a value-based utility token with objectives within the online advertising industry, enabling a crypto investor to benefit from the world of cryptocurrency, thereby enabling users to earn ASIMI tokens by watching advertisements while advertising on their own terms.

The fundamental plans and objectives of ASIMI tokens is to provide a free exchangeable token for advertisers and businesspeople within the online advertising industry. In addition, it will provide a unique method of minting that allows anyone in the community to earn ASIMI tokens at home. Therefore.

ASIMI is driven by values that empower individuals globally to reach their online business objectives and raise the living standards for themselves. ASIMI is designed to connect advertisers and viewers, whereby users can mint to obtain ASIMI token hence making crypto accessible to everyone, anywhere, and at any time.

Conclusion

The ASIMI project is based on an incredible principle that does not ask individuals to back it financially but rather requests people to gain interest in joining the ASIMI community. As a result, individuals can earn as well as participate without incurring any cost. As a value-based utility token, you can use it for purchasing advertising as well as provide ad minting rewards. ASIMI has now simplified the minting and distribution of tokens enabling many people to access cryptocurrency globally through a simple ad minting system. However, ASIMI token continues to benefit a large mass worldwide who anticipate establishing and prevent their online business by making their products and services known to their target markets.

PayPal CEO Predicts Cryptocurrencies Will Revolutionize Global Financial System

The chief executive of one of the world's largest payments providers is predicting cryptocurrency technology will revolutionize financial systems globally.

Ahead of the Axis Tel Aviv international investment conference, PayPal CEO Dan Schulman tells interviewers that he has high hopes for crypto tech in the future. I'm very excited about what crypto and digital ledger technology can do to the financial system going forward..."

Schulman's high hopes for crypto go far beyond Bitcoin (BTC) trading and into the realm of real-world use cases, such as cryptos as payment options. "I think the initial things that everyone thinks about crypto, buying and selling it, and what the price of Bitcoin is

going to be tomorrow, that's the least interesting part about digital currencies to me. That is thinking about digital currencies as an asset class. To me, the real exciting thing about digital currencies is what kind of utility can they provide in payments." Specifically, the payments giant CEO thinks central bank digital currencies (CBDCs) and digital wallets have the power to redefine everyday financial interactions.

Clearly, across the world, central banks are looking at issuing digital currencies. The intersection between CBDC, stable coins, digital wallets, and enhanced utility of payments through cryptocurrencies is not just fascinating, but I think will redefine a lot of the financial world going forward."

EU votes against a de-facto ban on Bitcoin's POW consensus method in MiCA draft

EU parliamentarians have voted against a de-facto ban on proof of work based cryptocurrencies which was included in the MiCA, or Markets in Crypto-assets Regulation, report.

The ECON committee of the European Union voted against a de-facto ban on cryptocurrencies that rely on the proof of work consensus protocol, like Bitcoin, that was included in the latest draft of the MiCA, or Markets

in Crypto-assets Regulation, report.

A majority of 32 parliamentarians voted against the ban and chose to support an alternative amendment — to bring cryptoassets under sustainability-related taxonomy like other financial products — submitted by MEP Stefan Berger, who is serving as the Rapporteur on the report. The amendment essentially removes the judgment and addressing of POW

from the MiCa regulation. Meanwhile, 24 parliamentarians voted in favor of the ban, under which the EU could essentially block exchanges from listing, as well as companies from providing services in, cryptocurrencies that do not meet its "environmental sustainability criteria."

Why is such a ban

included? Proof of work-based cryptocurrencies requires mining to validate transactions on the chain. Mining is essentially a complex problem that can only be solved using a massive amount of computing power, which in turn needs massive amounts of real-world energy to function.

HUBBLE, DEFI PROTOCOL ON THE SOLANA BLOCKCHAIN

Hubble is a decentralised finance (DeFi) platform built on Solana which will offer several DeFi services. The platform will allow users to borrow USDH, a stablecoin, as well as allow users to yield interest on other crypto assets deposited as collateral.

The protocol's main services are centred around borrowing USDH against other assets like BTC, ETH, and SOL. By offering multiple assets for deposit as collateral, Hubble is seeking to solve the liquidity challenge and establish itself as a stable borrowing and liquidity solution.

The protocol is built on the Solana network, known for its high transaction speed of up to 65,000 transactions-per-second (TPS). It is this high speed and low gas fees that make Solana very attractive for new DeFi projects.

Hubble Protocol was launched by Marius Ciubotariu in 2021, having participated in the Solana Season Hackathon – an experience that gave him exposure to immense opportunities within Solana and DeFi services. Marius is a former senior software engineer at Bloomberg LP.

The main mission for the establishment of the

Hubble Protocol is to partner with developers and innovators on Solana and other platforms to boost DeFi democratisation and the propagation of financial knowledge in a highly dynamic DeFi ecosystem.

Crypto traders are constantly on the lookout for higher-yield earning opportunities, better liquidity, and low fees. This is where Hubble Protocol comes in handy by increasing liquidity in the Solana blockchain.

The protocol is currently in Phase 1 of development and is backed by a native stablecoin USDH, which is pegged to USD.

Key features of the platform

The Hubble Protocol has six main features, including:

- HBB Staking
- Minting USDH
- Borrowing on Hubble
- Earn yield
- Earn liquidated assets
- Stability Pool

Below is a detailed overview of each of these features:

KEY FEATURES OF THE PLATFORM

THE HUBBLE PROTOCOL HAS SIX MAIN FEATURES, INCLUDING:

HBB Rewards

Hubble Protocol has the Stability Pool, which is comprised of USDH deposits from users. Users can share profits from asset liquidations when a borrowers' loan-to-value ratio (LTV) rises above 90.9%. Furthermore, users can deposit USDH into the Stability Pool for a chance to earn extra HBB.

HBB token holders earn 85% of the USDH rewards generated by the protocol, while the remaining 15% is deposited in Hubble's treasury. The treasury will fall under the community's control when Hubble launches the Decentralised Autonomous Organisation (DAO) and decentralises governance. The community will also have control over sharing of proceeds between community members and the treasury.

Minting USDH

USDH is a stablecoin on Solana and can be paired with several other tokens for trading or storage of value. USDH is pegged to the dollar to ensure its stability. This means the token is redeemed at the face value of 1:1 against the dollar.

The USDH token is designed and programmed to be backed by collateral at all times. USDH holders can also deposit the tokens in the Stability Pool for a chance to earn a share of liquidation when the market slumps. This helps to avoid bad debt and keep the system healthy.

Borrowing on Hubble

In its first phase of development, Hubble will focus on maximising value for both Solana tokens and HBB holders by offering cheap and capital-efficient borrowing options. The platform will first accept deposits of seven assets as collateral before expanding to welcome additional kinds of assets for deposit on the platform.

Hubble Protocol allows users to earn interest from their staked assets, as well as use them as collateral for loans. Users can take out loans of up to 90.9% of the collateral's value and reclaim their assets upon completion of loan payment.

Borrowers can pay off their loan at any time without a due date or maturity.

Earn Yield

In addition to accessing liquidity, the Hubble Protocol allows users to continue earning interest from their assets pledged as collateral for loans. Through opting in to yield strategies on Hubble, users can also have their collateral assets allotted to partner protocols in order to increase their yields.

Users can move their assets between Solana and Hubble to profit from the rise in SOL price as well as earn from Solana PoS yield. Other lending protocols in the ecosystem also pay yields on other collaterals, hence users can easily change from one crypto asset to another to maximise their return.

Earn Liquidated Assets

Hubble users can borrow up to 90.9% of their multi-asset collateral. The collateral may be liquidated if the borrowed assets in USDH reduce in value and a loan's health rises over the loan-to-value (LTV) ratio of 90.9%. When a borrower's collateral is liquidated, and each USDH depositor in the Stability Pool is given their equal share of liquidations..

You can personally trigger loan liquidations on Hubble as long as a user's LTV rises above 90.9%, although this is usually done automatically by bots. Users earn 0.5% of the liquidated assets for triggering liquidations, and the remainder is distributed to those with USDH deposits in the Stability Pool.

Stability Pool

The Hubble stability pool serves two main purposes – to keep the system healthy and reward the platform's users. USDH is programmed to be always backed by collateral, and it's the Stability Pool that offers the assurance that loans can be repaid. Moreover, the Stability Pool helps to democratise the liquidation process for users who stake their assets in the pool.

Users who deposit in the Stability Pool have to ensure USDH obligations are repaid when the collateral ratio goes below the required level. Again, those who place their assets in the liquidity pool qualify to earn an equitable portion of the collateral from the liquidated accounts. The earning is a reward for their participation in the smooth and

efficient running of the protocol.

Depositors in the pool also earn HBB tokens as compensation for participating in the pool. This is an additional incentive to deposit their USDH in the pool and ensure the smooth and healthy running of the system.

Why use Hubble?

Below are the advantages of using the Hubble Protocol;

- Users have a chance to deposit a wide range of assets, which helps free up more liquidity and boost the collateral ratio.
- Users can continue earning interests from the assets pledged as collateral. This allows them to maximise their yields within the Solana ecosystem.
- High yields. Users earn up to 11x yields from their deposits, thanks to the protocol's capital-efficient LTV ratio of 90.9%.

USDH and HBB tokens

USDH a censorship-resistant stablecoin native to the Solana network and serves various functions similar to other stablecoins in the DeFi ecosystem. Their functions include bonding for tokens, pairing for liquidity, and as a store of value.

USDH is backed by collateral at all times, including SOL, ETH, mSOL, BTC, RAY, FTT, and SRM. USDH token holders can deposit them in the Stability Pool and qualify for a share of liquidation revenue when the market slumps. The liquidation is meant to keep the system healthy by covering bad debt.

HBB Tokens

HBB token is the native token on the Hubble Protocol and has a total supply of 100,000,000 HBB. They are awarded to USDH token holders who stake them in order to earn additional token rewards.

The tokens also play a role in the governance of the protocol. HBB token holders can stake them and earn additional rewards, as well as participate in decision-making on the platform by voting on

various proposals on the platform. This allows holders to be stakeholders in determining the protocol's future based on their preferences.

HBB token holders who stake them earn 85% of the total USDH generated on the protocol.

Hubble Governance

Hubble will transition into a community-supported governance model similar to any other DAO. The democratisation of the platform allows users to make proposals for new products and improvements, suggest and vote on the protocol's modifications, and delegate implementation of key functions to the core team.

There are three main reasons why the Hubble Protocol has opted for decentralised governance:

- Empower users. The protocol intends to empower users and early adopters who are influenced and choose to stake their assets in the Stability Pool.
- Build trust. The platform has decentralised decision-making, meaning no single individual or entity is in charge of decision-making. This prevents any malicious behaviours from an individual or group.
- Community guidance. The decentralisation model is meant to iron out any inadequacies that come with centralised governance and welcome the input of all community members.

Decentralisation ensures that all community members have a fair say in the decision-making process. It offers everyone a say in determining the future of the protocol.

Initially, the Hubble Protocol will have a centralised governance model before transitioning to become fully decentralised. The decentralisation will ensure the decision-making process is delegated to the community. The community will be able to vote on two types of proposals:

1. Vote on code suggestions to be executed by the community.
2. Members will also vote on general directive

recommendations every quarter. Developers will be in charge of implementing proposals voted on by the community.

How safe is Hubble?

Hubble's borrowing platform has already passed three security audits from Kudelski, Arcadia, and Smart State. Third-party reviews will help Hubble create a more secure platform. After the audit and implementation of the necessary recommendations, Hubble will make the changes known to everyone. The protocol has also gained the support of leading investors within the cryptocurrency community and the Solana ecosystem.

How much yield can I earn using Hubble?

This depends on the yield strategy you opt into for your tokens. When these integrations go live, users will be able to either stake their tokens or lend them on different protocols across Solana.

Conclusion

Hubble Protocol is designed to strengthen the DeFi community by minting a censorship-resistant stablecoin, USDH. It will also support its community by distributing the fees generated on the system with all HBB token holders. In the future, Hubble will also have a governance model that ensures all community members have a say in determining the future of the protocol.

Hubble intends to explore more opportunities in the DeFi space due to the innovative and progressive nature of the DeFi landscape. The protocol will also work towards offering increasing its service base to meet the rising demand for peer-to-peer financial services.

Elon Musk Confirms He Still Holds And Won't Sell Bitcoin, Ethereum, And Dogecoin

tesla CEO Elon Musk has confirmed that he still holds Bitcoin, Ethereum, and Dogecoin, and that he doesn't plan to sell.

SpaceX CEO Elon Musk Still Owns And Won't Sell His Bitcoin, Ethereum, And Dogecoin Holdings Yesterday, the Tesla CEO asked his followers on Twitter about their thoughts on the probable inflation rate over the next few years.

One of the replies argued that the USD consumer inflation will continue near all-time highs, while asset inflation will be double this amount. The person also said that weaker currencies would collapse and more money would enter into scarce commodities like Bitcoin.

Elon Musk replied with "It is not entirely unpre-

dictable that you would reach that conclusion." He followed up in a chain tweet giving some general advice to the readers of the thread, saying that it's better to own physical entities like a house or stock in companies making good products, rather than dollars during times when inflation is high.

Musk also added "I still own & won't sell my Bitcoin, Ethereum or Doge fwiw." The Tesla CEO has always shown to be a firm believer in crypto, and has become one of the most popular figures in the space.

Simple tweets from Musk have often proved to be enough to kick-start rallies for coins like Dogecoin. The SpaceX CEO's affection for the memecoin especially has earned him the title of "DOGE father."

Skybridge Capital Founder: Bitcoin Will Be Legal Tender in Many Latin American Countries

The founder of Skybridge Capital has predicted that "bitcoin will be used by many Latin American countries as legal tender over time, not just El Salvador." He recently doubled down on his \$100K bitcoin price prediction but does not currently see the cryptocurrency as a hedge against inflation.

Bitcoin Will Be Legal Tender in Many More Countries, Says Scaramucci The founder of investment management firm Skybridge Capital, Anthony Scaramucci, expects more countries to adopt bitcoin as legal tender.

"I see bitcoin in its current status as

an early adopting technological asset," he said in an interview with Marketwatch last week. The Skybridge Capital founder elaborated:

El Salvador adopted bitcoin as legal tender alongside the U.S. dollar in September last year. The Salvadoran president, Nayib Bukele, predicted in January that two more countries will make BTC legal tender this year.

The CEO of Devere

Group, Nigel Green, also made a prediction in January. He said three countries will adopt bitcoin as legal tender this year.

Meanwhile, the CEO of cryptocurrency derivatives trading platform Bitmex, Alex Hoepfner, said in October last year that five countries will accept bitcoin as legal tender by the end of this year.

Welcome the Future of **Fine Arts**

World's first and only blockchain based artpiece exchange platform

We believe in a world where not only the lucky and privileged few, but everyone can invest in first-class artworks. Blockchain is the safest way to achieve this.

WHY BUY ARTEXX TOKEN NOW?

The digital currency of the Artex ecosystem is Artex Token. Artex token will be used for the function of all privileged functions of the platform and for shopping transactions.

Low Total Supply
Artex has only 100m total supply. First year the circulating supply will be only 50m.

A Promising Future Project
Artex is, world's first and only blockchain based fine arts exchange platform. It is the future of art market and one and only in its field.

Low Market Cap
You will be an investor in a project with great potential very early. Artex provide a future of arts.

WHAT IS ARTEXX?

With the Artex's smart contracts, you can buy and sell the amount you want from the works listed in the market. during the pre-sale process. The Artex Art Market aims to:

- PROVIDING LIQUIDITY TO THE STUCKED ART MARKET. ✓
- SUPPORTING ART AND ARTIST RIGHTS WITH A MAGNIFICENT TRANSPARENCY. ✓
- A DEMOCRATIC DISTRIBUTION OF FINANCE IN THE ART MARKET. ✓
- A CRYPTO EXCHANGE BASED ON A PHYSICAL AND VALUABLE COMMODITY. ✓

HOW IT WORKS

Artex ecosystem based on blockchain and we solved issues of current and future

1. Artwork Listing Request
2. Artwork Valuation Commission
3. Tokenization of Artwork
4. Listing Artworks on Artex
5. Trading on Fine Arts Token

ARTEXX.APP

Bitcoin Hashrate Swells 15% Since Last Week As Analysts Expect Mining Difficulty To Increase

Bitcoin mining difficulty fell by 1.5% last week, following the full recovery of China's mining ban last year.

China started to crack down on cryptocurrency, prohibiting financial institutions and payment companies from providing services related to cryptocurrency transactions.

China accounted for roughly 75% of the "average monthly hash-rate share," a term used to calculate the computational power needed to mine Bitcoin.

After Beijing effectively banned the country's cryptocurrency miners in May, more than half of bitcoin's hashrate disappeared from the global network. But as of the early months of

2022, Bitcoin mining had fully recovered. On March 3, the difficulty decreased by 1.5 percent following six straight increases.

Bitcoin's mining difficulty is currently at approximately 27.55 trillion, and processing power has been up since the last adjustment.

Bitcoin's hashrate has climbed by approximately 15% since the difficulty adjustment and by 30% since it reached 169 EH/s two weeks ago.

The network's processing power is currently around 218.11 EH/s, and it has managed to remain a little over the 200 EH/s mark for the last 10 days.

Motions denied for both SEC and Ripple as battle continues

Ripple CEO Garlinghouse claims a "big win" in the dismissal of an SEC motion while remaining silent about the ruling on his own motion.

Southern New York District Court Judge Analisa Torres issued two rulings Friday on motions filed in the Security and Exchange Commission (SEC) lawsuit against Ripple Labs.

Ripple argued that it was not given fair notice by the agency that it would consider the token a security, thus denying the company due process. Judge Torres denied the SEC motion, filed in April, to dismiss this defense, and by doing so affirmed that the defense is viable in the suit — in other words, that the defense, if accepted, could be used to win the case.

The judge also denied a motion filed by Ripple CEO Brad Garlinghouse and executive chairman Chris Larsen in April to dismiss the case against them for aiding and abetting the alleged unregistered securities sales. By filing the motion, the defendants claimed that, even if the allegations in the suit were true, they would not comprise a winnable case.

While Garlinghouse hailed the rejection of the SEC motion as a "huge win" on Saturday, the case is still in the pleadings stage, so there are likely to be many more legal maneuvers to come. Since the decisions Friday, Ripple has moved to strike a supplemental report rebutting an expert report on the market performance of XRP.

Maker of Angelic Gets \$10M in Round Joined By Animoca Brands, Pantera Capital, Solana Capital, Everyrealm

A blockchain-based MMORPG has yet to go mainstream, but some industry leaders are betting eight figures the first could be Angelic.

Metaverse Game Studios has raised \$10 million in an investment round led by blockchain gaming company Animoca

Brands, crypto-focused hedge fund Pantera Capital, Solana Ventures, and metaverse investment company Everyrealm.

OKX Blockdream Ventures, Mechanism Capital, Morningstar Ventures, Huobi Ventures, Shima Capital, Ancient8, and Rainmaker also participated in the round.

Metaverse Game Studios' first title is Angelic, which aims to be a AAA MMORPG in a sci-fi world. Its developers have previously worked on AAA games like League of Legends, Far Cry, Metro Exodus, and Halo 3.

Angelic released its first gameplay footage back in September 2020 and has plans

to release "Founder Series" NFTs, token sales, airdrops, and two demos this year.

In a statement, Pantera Capital partner Paul Veradittakit called Angelic "a much needed top-tier game product" in the blockchain gaming space.

Department of Justice Targets Crypto Exchanges in Effort To Clamp Down on Russian Oligarchs

The Department of Justice (DOJ) says crypto exchanges will be included in a sweeping new strategy to clamp down on the assets of Russian oligarchs.

Earlier this month, the DOJ announced the launch of a new task force called KleptoCapture aimed at targeting oligarchs and other high-ranking Russian officials during its war with Ukraine.

According to the DOJ, the task force is "dedicated to enforcing sweeping sanctions, export restrictions, and economic

countermeasures that the US has imposed, along with allies and partners, in response to Russia's unprovoked military invasion of Ukraine."

In a new interview with NBC News, an unnamed senior Justice Department official says the task force will not only enforce the sanctions but also seek to seize their crypto assets as well.

"Our success will be defined as dismantling, disruption and discomfort for these oligarchs, their enablers, and their networks.

Sign up for the maxxer pre-sale!

Don't miss out on securing \$MXXR tokens at this discount before public sale launches, **get a 25% discount now!**

- Discounted trading fees using \$MXXR
- Crypto based social trading platform
- Regulated and secure
- User-friendly

Trade at a discount

When you use the MXXR token to pay for trading commissions, you get a 50% discount. When actually making a trade, you can directly see how the fees and spread influences your trade.

Charity donating

At maxxer we are dedicated to helping make the world a better place, and as such 2% of all transaction fees will be donated in our \$MXXR charity pool.

Each quarter the charity pool will be distributed with people able to directly donate additional \$MXXR tokens in order to vote proportionally on where that money goes, receiving a receipt for their donation and maxxer rewards as an added bonus! All donations will be made in the name of the donors.

Raffles

1% of all transaction fees paid with the \$MXXR token will be put into a lottery fund with one \$MXXR token equaling one raffle ticket, giving users of the maxxer exchange even more reason to not just buy, but hold \$MXXR as well.

Tipping content creators

By creating your own space for social content we will let you support those that provide genuinely good and useful content by tipping them. This removes the need for influencers to turn to external sources of income and actually punishes them for it as people will only want to reward those who give out good advice.

what is maxxer?

maxxer is the first centralised and regulated digital asset exchange that focuses and rewards a communal and social trading system. We are making crypto investing and trading accessible and simple; guiding both new and experienced investors through the ever-changing cryptocurrency markets in your own maxxer community.

Social trading

Gamification

Watch, Read, Share

Liquidity

maxxer will enhance liquidity by settling the exchange of members' assets within the internal exchange and effectively combining the aggregated liquidity across public exchanges. We will use 35% of the IEO proceeds to facilitate market making partners and our own marketmaker to deliver narrow spreads and a deep liquid order book at a fair price versus other global exchanges.

- Using market makers that are marketmaking over 50 exchanges globally.
- Using our own marketmaking and inter-exchange arbitrage bot.

Security

We have developed a multilayered security system that is capable of both containing and neutralizing attack attempts in a timely manner with the need for as little human intervention as possible.

We also make use of state of the art solutions for multi signature and redundancy in every step of the way when it comes to cryptocurrency transfers, even in hot wallets which are directly connected to our system.

Rapidly changing regulations

maxxer is compliant by design and intends to fully comply with all

regulatory aspects in all the regions it will operate.

maxxer engages with the best-in-class lawyers and consulting firms to ensure that we are fully compliant with the current regulations and a step ahead for the coming MICA (Markets in Crypto Assets) regulation.

Gas fees: Ethereum is now cheaper than Polygon

With gas fees as low as 10 gwei, Ethereum's layer-1 is becoming a bargain deal, even compared with sidechains like Polygon. Ethereum gas fees are now at their lowest since July 2020.

Who would have guessed Ethereum gas fees would ever be cheap again? Sometimes the past week, gas fees have been as low as just 10 gwei per gas unit even for high-priority transactions. As one gwei is one-billionth of an eth, this means a transaction on Ethereum (ETH) mainchain can be as affordable as 50 cents in total.

To find equivalent price levels, one has to go back to July 2020. This is the first time in nearly two years when using the Ethereum network's layer-1 chain costs users so little. Last May, in contrast, fees reached as much as \$70 per

transaction. On May 19th 2021, an all-time-high gas fee was printed at over 659 gwei on average. That's almost 66 times as much as the 10 gwei seen recently.

Transactions still in high demand. Yet, network demand remains relatively high with more than one million transactions a day. This number has not fallen as much as the gas fees, in fact, the number of transactions stays relatively level over time.

As CryptoSlate reported last week, transaction fees on Ethereum have dropped from as high as \$200 to as low as \$15 within the last six months. According to Arcane Research, cited in the article, the main reason behind the recent drop in Ethereum gas fees is the lower trading volume, and perhaps lower interests, in non-fungible tokens or NFTs.

Canadian Cops Confiscate Bitcoin Worth Over \$28 Million From Ex-Gov't Employee

Sebastien Vachon-Desjardins — a former Canadian government IT professional — was charged with conspiracy to commit computer and wire fraud, and other offenses in a federal court in Florida, the US Department of Justice said Friday.

The Royal Canadian Mounted Police (RCMP) raided Vachon-Desjardins's home and seized 719 bitcoins worth more than \$28 million, or 790,000 in Canadian currency.

Prosecutors claim he used the "NetWalker" ransomware to target businesses, municipalities, hospitals, and law enforcement during the height of the COVID-19 pandemic.

The arrest comes in the face of a global crackdown on ransomware. In

November, US President Joe Biden promised to use "the full strength of the federal government" to disrupt malicious cyber activity.

Several large-scale operations have since brought down ransomware groups such as Russia-based REvil and other related hacking groups.

Bitcoin As Ransomware Payment
The cybersecurity community increasingly cites bitcoin and other cryptocurrencies as a significant enabler of ransomware attacks.

Suspected ransomware payments totaling \$590 million were made in the first six months of 2021 and have continued to exceed estimates since the early months of 2022, US authorities said.

4 NFT Collections!

REEFER Token is proud to bring you multiple collections of NFTS! Exclusive Access to next collections, dividend paying, from grow to retail, & for use in PTE game WEED WARS!

Exclusive Access
By obtaining this specific collection you will have priority before the public of the future NFT collections.

Dividend Paying
With these you will get staking rewards (Dividend paying)

Grow To Retail
REEFER Token will offer a convenient way to use block chain records to be transferred from the farmer and processors to the consumer without violating cannabis laws and regulations. When the consumer purchases cannabis from one of our Partner Dispensaries or Vendors the product will be displayed with a QR code. The customer will scan the code and obtain the following product facts along with an NFT to authenticate it!

Play To Earn Game WEED WARS!
This collection you will be able to use in the PTE game WEED WARS! You can purchase grow houses, grow farms, trap house, dispensaries, seeds, plants, cloning/breeding, security, etc...

What is REEFER TOKEN?

REEFER Token is Setting a New Industry Standard on how Legal Dispensaries, Smoke Shops, Vape Shops, Cannabis Lounges, Restaurants and Gamers Interact. Cannabis, Crypto, NFTs & Metaverse Combined to Birth the REEFER Ecosystem Revolution!

Shop Integrations

The platform helps Dispensaries, Smoke Shops, Vape Shops, Cannabis Lounges and Restaurants to accept easy form of payments. Customers will go through our digital Point Of Sale System and Inventory Control through Automated Inventory Management.

Cannabis Meets DeFi

Decentralized finance, or DeFi, uses emerging technology to remove third parties in financial transactions. You hold your money in a secure digital wallet instead of keeping it in a bank or cash and Transfer Funds in Seconds while Protecting Your Identity!

Rewards System

Customers get Rewarded for Loyalty & Referring others with a Loyalty Rewards and Incentive Program by receiving discounts & Free Products. This will result in Shops Increased Customer Retention and Strengthening Customer Affinity.

Stablecoin Economy Nears \$200B, UST Supply Jumps Higher, USDN Spikes 43% in 30 Days

During the last 12 months the stablecoin economy has grown massive and the current valuation today is only \$13 billion away from tapping the \$200 billion mark. This month, the two biggest gainers in terms of 30-day issuance include Terra's UST jumping 29.9% and Neutrino Protocol's USDN spiking 43.8%.

Stablecoin Market Capitalization Continues to Swell, Tether Crosses \$80 Billion
Monthly statistics show the largest stablecoin in terms of market capitalization, tether (USDT), increased by 2% this month as the valuation crossed the \$80 billion mark. USDT is massive compared to the rest of the stablecoins in

the crypto economy as its valuation represents 42.78% of the \$187 billion stablecoin economy today.

Furthermore, tether's \$80 billion market capitalization equates to 4.46% of the entire \$1.83 trillion crypto economy. The second-largest stablecoin in terms of market capitalization, usd coin (USDC) only increased by 0.3% this past month.

USDC has a market valuation of around \$52.3 billion today which equates to 2.92% of the crypto economy and 27.96% of the stablecoin economy.

FCA issues termination order for Bitcoin ATMs

The financial watchdog in the U.K. has declared that all non-registered ATMs must be immediately closed down or be subject to undisclosed additional action.

Financial Conduct Authority (FCA), United Kingdom's central financial regulator, has issued a verdict on the presence of Bitcoin (BTC) ATMs within the island country.

In what has come as a surprise to many within the industry, the U.K.

authority has issued a stern "shut down or face further action" order to operators of Bitcoin ATMs, outlining their intentions to contact these companies to affirm the notice.

The watchdog cited a lack of regulatory structure, the high-risk potential of fluctuating assets and the importance of upholding the principles established within the Money Laundering Regulations (MLR) as the primary reasons for the enforcement.

"We are concerned about crypto ATM machines operating in the UK and will therefore be contacting the operators instructing that the machines be shut down or face further action."

The FCA has granted registration approval to 33 crypto companies since August 2020

under the MLR framework, the most notable of which being: Gemini Europe Ltd, Kraken's holding company Payward Ltd, Galaxy Digital UK Limited and, more recently added to the list on Jan. 14, eToro (UK) Ltd.

SAVE THE NUNU, SAVE THE FOREST.. BUT FOR REAL !

Reduce CO2 while you play to earn. NUNU merges the joy of casual gaming with the earning capacity of blockchain and turns it into an ecological action.

GENERATING THE WORLD

The tallest oak starts with the tiniest of seeds. So too will our ecosystem grow. With a project of this size and scope, it is essential to break it up into manageable steps. Each of these phases must be within the skills and resources of the team but also build a strong foundation for subsequent phases. Our company is familiar with iterative development and even more specifically with building NFT based projects. We understand the needs of early adopters as well as what is needed to sustain a healthy long-lived NFT based ecosystem.
